There is a horse at Pleasanton that could be fitted for the National Horse Show and make a sensation. I refer to the bay stallion by Silver Bow that Colonel J. C. Kirkpatrick owns. He is out of that grand old broodmare Grace by Buccaneer and looks to me like show ring goods. He has trotted a mile very nicely in 2:20, and I don't douht hut he could win money in races, as he has no record and three heats in 2:15 should not be beyond him. But it is as a show horse that he would shine. Put heavy shoes on his front feet, a curb bit in his mouth, and he would undoubtedly put ahout three hingea in his neck and show all the style necessary. He is built like a show horse, has a beautiful coat and tail, and his body is just ahout perfection. Worth Oher, who has been handling the Colonel's horses while James Thompson has been doing the Grand Circuit, thinks this Silver Bow stallion is too good a trotter to make a show horse out of; and perhaps he is, but he would shine in a dress suit heyond a doubt.

Largest Money Winners of 1904.

The chain of Grand Circuit meetings of late years is the winnowing mill which separates the grain from the chaff and also divides the heavy plump kernels of grain from the lighter ones. A comparison of the largest money winners in the Grand Circuit the past season and a study of their blood lines is both interesting and profitable to the progressive breeders of light harness horse stock.

By consulting the table of largest money winning trotters in the Grand Circuit of 1904 it will be seen that six of them have each won $10,000 and upwards. The largest amount won hy any one of these is $23,825 and stands to the credit of the California hred eight-year-old bay mare Sweet Marie 2:04¾ The sire of Sweet Marie, as all our readers doubtless remember is McKinney 2:11¼ a son of Alcyone 2:27, hy George Wilkes. Sweet Marie's dam, Lady Rivers, was by Carr's Mambrino, a somewhat obscure son of Mambrino Patchen 58. Her second dam, Susie, was by Redfield's Vermont, ho by Independence, a son of the Peck horse (also known as Cottrill Morgan) a son of Vermont Black Hawk. The third dam of Sweet Marie was by Highlander, but which one of the several Highlanders is not clear to us. There was no less than seven stallions by that name owned at different times in Kentucky, all descendants of imported Brown Highlander. Sweet Marie's fourth dam was by Owen Dale, a thoroughbred son of Williamson's Belmont. Her fifth dam was by Morgan Black Hawk Comet, he by Young Black Hawk, a son of Vermont Black Hawk.

The next largest money winner is the three-year-old bay filly Grace Bond 2:09¼, whose sire is The Bondsman by Baron Wilkes 2:18, a son of George Wilkes. The dam of Grace Bond is Grace Boyd by Ashland Wilkes 2:17¼, a son of Red Wilkes by George Wilkes 2:22. Her second dam is Oneida 2:17 by Florida, he by Rysdyk's Hambletonian and from a daughter of Volunteer 55, son of Rysdyk's Hambletonian. Her third dam is Lady Ham (dam of Hawthorne 2:06¼, etc.) by Hambrino 2:21¼, a son of Edward Everett by Rysdyk's Hambletonian. Her fourth dam was by Ashland whose sire was Mambrino Chief and whose dam was Utila, a thoroughbred daughter of imported Margrave. Grace Bond won $16,600 the past season.

The third in rank among the largest money winning trotters of the year is the seven-year-old grey gelding Dr. Strong 2:07½. His sire is Strong Boy 2:11¼ by Allandorf 2:19½, son of Onward 2:25¼ by George Wilkes 2:22. The dam o' Dr. Strong was by Gould Clay, a son of Neave's Cassius M. Clay Jr., and his second dam was by Lex, a horse whose origin and breeding we have as yet been unable to identify. It is possible that he was the horse by that name foaled in 1834 and registered in Bruce's American Stud Book, Vol. 1, page 585. If so his sire was Snyder's Duroc, a son of old Duroc. Snyder's Duroc was owned by John Snyder in Pennsylvania. The dam of this Lex was Kitty by a son of Cox's Arabian. Dr. Strong won $15,200.

The next trotter in rank among the Grand Circuit winners of 1904 is Consuela S. 2:07¾, a ten-year-old bay mare by Directum 2:05¼, a son of Director 2:17, hy Dictator, son of Rysdyk's Hambletonian. The dam of Consuela S. was by Nutwood 2:18¾, and her second dam was by Bell Alta, a son of the thoroughbred Williamson's Belmont. Consuela S. won $13,975 the past season.

The fifth in rank is the bay three-year-old filly Alta Axworthy 2:10½ by Axworthy (3) 2:15½, a son of Axtel (3) 2:12, by William L., by George Wilkes 2:22. The dam of Axworthy 2:15½ was Young Daisy by Strideaway, a son of Black Hawk Telegraph by Vermont Black Hawk. The dam of Alta Axworthy is S. Alta Thomas by Nutpine, a son of Nutwood 2:18¾; second dam Jenny Sprague 2:15¼, by Round's Sprague 2:24½, a son of Gov. Sprague 2:20½; third dam Kit, by Gage's Logan, a son of Rysdyk's Hambletonian. Alta Axworthy's winnings amounted to $12,758.

The sixth winner in rank is the nine-year-old hay gelding Tiverton 2:04½ hy Galileo Rex 2:15¾. The latter was hy Young Jim, a son of George Wilkes 2:22 and his dam Tansey was hy George Wilkes, his second dam heing Dame Tansey hy Daniel Lamhert. The dam of Galileo Rex was Dewy Eve, by George Wilkes 2:22. The dam of Tiverton was hy Arragon, a son of Abe Downing. The latter was hy Joe Downing, whose sire was Alexander's Edwin Forrest and whose dam was Lizzie Peebles, a noted running bred daughter of the old four mile running record breaker Wagner. The second dam of Tiverton was Stolen Kisses hy Pendermis, a son of Swigert hy Alexander's Norman; third dam Margin hy Gov. Sprague 2:20½; fourth dam Melissa by Lakeland Ahdallah, full hrother of Harold, and fifth dam hy Alexander's Abdallah. Tiverton 2:04½ won $10,500 in the Grand Circuit the past season.

All of the ahove great money winners are direct descendants of Rysdyk's Hambletonian. Five of them trace directly to Hambletonian through George Wilkes, and the other through Dictator, a full hrother of the renowned old-time world's record breaker Dexter 2:17¼. Two of the number, Grace Bond (3) 2:09¼ and Tiverton 2:04½, are inbred to the Wilkes strain. The pedigrees of Alta Axworthy (3) 2:10½ and Tiverton each show a cross of Governor Sprague 2:20½; Consuela S. 2:07¾ and Alta Axworthy have a Nutwood cross. Sweet Marie 2:05 inherited one cross of the thoroughbred Williamson's Belmont, and Consuela S. 2:07¾ has two crosses of that horse. Tiverton 2:04½ and Sweet Marie each have two crosses of Vermont Black Hawk and a Black Hawk strain is also found in the pedigrees of Grace Bond (3) 2:09¼ and and Alta Axworthy (3) 2:10½. The Wilkes branch of the Hambletonian family appears to be outstripping all others in the production of first-class Grand Circuit money winners.—*American Horse Breeder.*

The *American Sportsman* throws this suggestion to the Year Book compilers: "We are not anxious to achieve a reputation for premature suggestiveness, but it is in good form, we believe, to suggest to the compilers of the Year Book for 1904 a more speedy preparation than we have had during the past five years. Horsemen and breeders can stand a volume larger than the Year Book of 1903, and in no event should tho complete list of all 2:30 trotters and 2:25 pacers be omitted. The Year Book for 1904 should he in hand at latest by February 1, 1905."

Jackson's Napa Soda does not tangle the feet.

Notes and News.

Vance Nuckols has won fifty-two races this season.

Joe Smith of Vallejo has five horses in training at the Pleasanton track.

Jay Bird now has 102 in the standard list, having added six new ones this year.

Good judges think they have discovered the 2:00 pacing mare in Belle Mc 2:04¼.

Axtell 2:12 added eight new standard performers to his list this year, seven trotters and one pacer.

The *Western Horseman* will not offer a stake for foals of 1905, but promises to renew its very popular 1904 stake in 1906.

There is a big boom in speedway racing in Boston. The Metropolitan Driving Club expects to have 2000 members by next spring.

Sutherland and Chadbourne have a big string of trotters and pacers at Pleasanton—there being 22 head in their stable, the property of different owners.

Get your advertisement in the holiday edition of the BREEDER AND SPORTSMAN. It will reach a very large number of the very people you want to do business with.

E. E. Ecker, better known as "Ras" Ecker, will winter at Memphis, where he is now located with Lady Patchie 2:10¾, a two-year-old by Arion 2:07¾ and several promising green ones.

A new matinee pacer that is proving a sensation is called Baldy, owned by Charles Hancock of Colorado Springs. Half miles i one minute or less is the claim made for this speedy youngster.

S. A. Botsford of Visalia has sold to Jerry Motheral of the same place a four months old colt by Robert Direct, for $250. The colt is entered in the Kentucky Futurity and will be developed by Mr. Motheral.

The trotter Jim Fenton 2:15¼, owned at New Castle, Pa., is turning white. About two months ago a small white spot was noticed below his right eye. Now at least one-half of the left side of his head is white. He is a brown gelding.

Greco, the young stallion by McKinney 2:11¼, dam Aileen, dam of two in the list, by Anteeo, second dam Lou Milton the dam of Lou Dillon 1:58½, is being worked some at Pleasanton by trainer Johnson and acts like a sure trotter.

Presiding Judge George Hayt, of Binghamton, N. Y., believes a uniform system of race procedure will be decided upon for next season's Grand Circuit, and also anticipates going down the line again as head of the stand at each meeting.

The colts by Searchlight 2:03¼ and Lecco 2:09¾ that are now being weaned in various parts of California are good advertisements for their sires and will induce the majority of their owners to send their mares back to Pleasanton in the spring.

The National Horse Show Association has distributed prizes aggregating $440,685 at the nineteen annual exhibitions held since 1883 The total amount offered at the first show was $6650. For the exhibition this year the association offered $35,000.

Thomas Ronan, proprietor of the Pleasanton track, returned from Washington last week with a half dozen head of horses, all by Antrim except one and that by Alexis. Mr. Ronan will have these horses worked for speed by Geo. A. Kelly at the Pleasanton track.

The Canadian ice racing circuit will be inaugurated at Peterborough the first week in January. Ottawa is considered the Lexington of the North, as a winter racing resort, and the meeting at the picturesque capital city will be greater than ever before this winter.

The tattooing of the horse is said to be the latest fad, which had its origin in Paris. Prominent leaders in society in the French capital have had their family coat-of-arms punctured into the sides of the horses, and the new craze has already spread throughout Europe.

Unsoundness in a horse may frequently be determined when he stands at rest. Place the horse on a level floor, watching for a few minutes, and if he is sore footed, the foot that causes pain will be stuck out in front of him, or the hind feet turn about persistently.

Mr. E. Servis, owner of that tried and true pacer Edwin S. 2:08 and the very fast unmarked pacer Doctor J. has recently taken these horses to Pleasanton and will train them there during the winter. Edwin S. was the fastest horse on the Pacific Coast this season, his record made at San Jose being the best mile made by a harness horse west of the Rocky mountains during the year. Mr. Servis has a fine bay gelding, own brother to Doctor J. at Pleasanton, and will develop his speed there during the winter. He is a very promising young horse.

Farmer Bunch has a dozen horses in his Pleasanton stables. He will have Nance O'Neil 2:09¼ in his string and will train several others owned by Mr. B. Croner of this city. Bunch is also driving some of Ed. Mills' horses in their work, and is one of the busiest men at the track.

The California bred stallion Bonnie Russell 2:01¼ raced successfully by Scott Hudson this year, was sired by Conifer, out of Bonnie Ella by Bonnie Boy 2:27¼, second dam Creola by Jerome Eddy 2:16½, third dam Sophie Clay, by Rushmore, son of Henry Clay 8, fourth dam Katy by Justin Morgan.

Mr. T. C. Cabney, the well known trainer, is having a barn containing fifteen stalls built for him at the end of the electric line, adjoining the Casino, and will be ready to begin business there by December 1st. He will open a training and boarding stable and will have excellent accommodations for road horses.

Mr. L. P. McCarthy, the horse auctioneer of Portland, Oregon, was in San Francisco this week accompanied by his son. They will spend the winter in Los Angeles and return north in time for their April sale of harness horses which promises to be one of the best of the many good ones they have held in that city.

Alto Genoa 2:14½, son of Dexter Prince, is one of the most popular sires used by San Joaquin county breeders. His colts are unformly large and of solid color and meet with ready sale on account of their size and good looks. Sixty-two mares were bred to Alto Genoa this year at a fee of $30. He is owned by Mr. G. Peraino of Lodi.

M. Henry of Haywards, who is training several of his Educator colts at Pleasanton track, has just begun on a fine large two-year-old out of Elsie by Silver Bow, that is a very promising young trotter. He will be a sixteen hand horse, rangy and high headed, with lots of style and substance. He has a black yearling out of a Naubuc mare that is also very promising.

One of the best looking yearlings in this country is a bay colt by Zombro 2:11 out of a Nutwood Wilkes mare that P. W. Hodges has at Pleasanton. The little fellow is all horse and after being hitched up two or three times trotted a quarter in 40 seconds without any fuss or seeming effort. Hodges thinks he'll win a few stakes with this youngster, and it certainly is a very promising one.

The honor of being the fastest five-year-old trotter of 1904 is shared equally by Angiola by Gregory the Great 2:23¾ and Aristo by Nushagak, each having trotted in 2:08¼. The fastest record taken by a five-year-old pacer during the season is 2:05¼, no less than three sidewheelers having taken records in that notch —Estatic by Oratorio 2:13, Black Hal by Star Hal 2:04¾ and King Direct by Direct 2:05½

Ed Geers, who is convalescing at St. Joseph's hospital from effects of a broken leg, paid the following tribute to two of the timers when asked his opinion of the disputed mile made by Lou Dillon at the Memphis Trotting Association's track last Friday. "If Ras Ecker and Lafe Shafer caught Lou Dillon in 2:01. I will stake my life that she trotted in that time," said the silent man.—*Ky. Stock Farm.*

Al McDonald received from Oakwood Park Stock Farm, last Saturday, two new additions to the stable of horses he is training at the Pleasanton track. One is a fine-looking bay stallion own brother to Diablo 2:09¼, Don Derby 2:04½ and others. This horse is a trotter and although he would doubtless be able to take a low mark pacing, he will be trained at the diagonal gait as it is believed he can trot to a very fast record.

The statement has been widely published that John M.'s fourth heat in 2:04½ is the world's record. This is a mistake. Robert J.'s 2:02¾, made in 1896, is still the best. On that occasion Frank Agan won the first heat in 2:03¾ and "little Robert" the next three in 2:04½, 2:04½, 2:02¾. In the John M. race the four heats were paced in 2:02, 2:06, 2:03½, 2:03½. The total time for the four heats is a half second faster than that of the Robert J. race, making it a new world's record.

Morosco 2:12, the best trotter on the California circuit this year is taking things easily at Pleasanton and is so many pounds heavier than he was during the summer that one would hardly recognize him. His owner Mr. Minor, of Humboldt county, will be down in a few weeks and will attend to his training personally for a while. At present the horse is in charge of W. Hellman who has him in fine shape. Morosco should enter the 2:10 list rather handily next summer.

An advertisement in an Eastern paper announcing a horse for sale reads: "Grandly made, handsome and sound. No mark, but has shown very fast. Was in seven races the past season and in the money every time. Was not marked as it was expected to stake him next year." Section 2 of Rule 48, National Trotting Association, reads: "Should an owner state that he gave orders to driver of his horse not to win a race, he shall be expelled on proof before the proper tribunal."

Mr. W. G. Preston, a prominent business man of Washington and one of the owners in the Preston-Parton Milling Company of Waitsburg in that State, has sent three mares to G. A. Kelly of Pleasanton to be trained. They are Josie 2:16 by Glenelg out of Bunnella (dam of Billy Red 2:10 and Lady R. E. D. 2:16¾) by Ingraham; Della Norte (two-year-old record 2:22½) by Del Norte 2:08, and Glendell, a green one by Del Norte. Mr. Preston will spend the winter in California, dividing his time between Pleasanton and Berkeley.

A. H. Wayne is training three good prospects at Pleasanton for Mr. W. T. Smith, the well-known and popular liveryman of Oakland. Mr. Smith not long ago purchased a bunch of twenty-five standard bred horses from the Haggin ranch, and these three he picked out for a little training as they all show considerable natural speed. One is a black gelding by Knight, dam La Scala by Alaska. This horse is a good gaited trotter. Although he is a black, his head bears a very marked resemblance to that of Anaconda. The other two are pacers. One is a gelding by Bay Bird out of Cecelia by Pascora Hayward, and the other a mare, own sister to Carmelita 2:10½ by Cornelius, son of Nutwood.

P. W. Hodges, who has a big string of trotters and pacers in training at Pleasanton, surprised everybody one day last week by letting a very handsome two-year-old pacing colt by Nutwood Wilkes step a half in 1:02½. The youngster looks like a race horse, and should be one as he is by a sire of race horses and his dam is Atherine 2:16¾, a very fast trotter by Patron 2529, second dam Athene, dam of Aroon 2:27½ and Atherine 2:16¾ by Harold 413, third dam Minerva, dam of Meander 2:26½, Nugget 2:26¾ and Egmont, (all producing sires) by Pilot Jr. 12, fourth dam by Mambrino Chief 11, fifth dam by Downing's Bay Messenger, second dam by Whip Comet.

Major Martine of Sacramento has obtained a bond from Mr. J. B. Haggin that he will dispose of the Haggin ranch, known as Rancho del Paso for $50 per acre. The farm contains 44,000 acres, and Mr. Haggin agrees to accept $500,000 down and allow the balance to stand for five years at 4 per cent interest. He, however, desires to retain for five years 7000 acres, including the pastures and the horse barns, in order to dispose of his stock, and will then deed this over at the same price. If Major Martine can promote the big land scheme he now has under way, the great Rancho del Paso thoroughbred farm will soon be a thing of the past and will be cut up into small tracts and sold to small farmers.

In a large paddock back of the stalls at the Pleasanton track are a number of broodmares that were bred to Bonnie Direct and Bonnie Steinway last spring. The majority of them are owned by Messrs. Griffith & McConnell, who own these stallions, but a few are owned by other parties who have arranged to have them kept there the year round. One is a grand looking mare by Electioneer, owned by Mr. Rosenbaum of this city, and another is that piece of greased lightning Mr. W. A. Clark's Christobel by Steinway—a mare that has paced a quarter in 28¼ seconds. All these mares are in extra good condition and are thought to be surely with foal. Christobel's foal should be a regular wind-splitter.

The track at Hollister has been leased by a company of the leading citizens of that place who are interested in the improvement of the horses and other live stock of San Benito county, and fairs and race meetings will be given there annually during the time of the lease, which is for a period of five years with a privilege to purchase at a stated figure. Among those prominently interested are Messrs. R. P. Lathrop, Robert I. Orr, A. D. Shaw, Frank Blessing, William Highy, Joseph Lynn and several others, all responsible and enterprising citizens of Hollister and engaged in the breeding of live stock. The Hollister track is one of the best in California and will be kept in shape for training purposes. The Hollister fair of 1905 will be one of the best held in the State is our prediction.

Ted Hayes writes us that he is nicely located at Los Angeles with the string of horses owned by Mr. W A. Clark, Jr., and will train them at the Agricultural Park track there during the winter and spring. He has Bon Voyage 2:15, the great two-year-old colt by Expedition, Sally Lunn, Morone 2:18¼ by Cicerone, Miss Georgie 2:11¼ by McKinney, Will Clark by Strathway, and Master Delmar 2:16 by Delmar. Hayes says that Mr. Clark will spend much of his time in Los Angeles this winter and will participate in the matinee races held under the auspices of the Los Angeles Driving Club. There are a large number of horses in training at Los Angeles and nearly all the stalls at Agricultural Park are filled with trotters and pacers.

Mr. James Walker, Coldwater, Mich., writes that that grand old Morgan stallion, Royal Fearnaught' died November 7. This noted son of Fearnaught 2:23¼, was in his 23d year. By the Year Book he is credited with a total of 25 standard performers to the close of last season, and with the dams of 17. The majority of the former made their records in the high-wheel days. Among the best trotters in the lot were St. Elmo 2:16¼, Royal 2:20¾, Roy 2:21¼, Chance 2:23¼ and Gladys 2:23. Silverthread 2:15¾ to high wheels, was his best pacer, although Lora 2:14½ and Nelly Walker 2:14½ took fast records later to the bike. The fastest trotter produced by one of his daughters was Hazel Ridge 2:11¼, the fastest pacer Pendulum 2:12¼.

Horsemen will learn with sorrow of the death of Alexander Newburger, which occurred Oct. 29, at his home in New York City, after an illness of several weeks. Despite the protests of his family, Mr. Newburger on Oct. 8 started the trotters in the races held under the auspices of the Road Drivers' Association, on the speedway, and by standing several hours in an exposed position contracted a cold which caused his death. Mr. Newburger began driving trotters on the road in New York in 1865 and for nearly 40 years he had rarely missed his daily spin. He bred the roan trotter, Newburger 2:15¼, with which John Splan won so many races in 1896, and owned many others, including Smilax 2:21½. He was vice-president of the Road Drivers' Association, and from the first was one of the most active workers in its affairs.

Racing on the Tall Corn Circuit.

["Columbus" in Western Horseman.]

One hundred and eleven trotters started at Grand Circuit meetings without earning their owners a cent, while eighty-eight horses did equally as well. Here were one hundred and ninety-nine horses raced for pleasure at points where the fun cost plenty of money. Many of these horses started in as many as five races and the number of times they started only resulted in additional pleasure to their owners. In the "Tall Corn Circuit," where I raced my two year-old by Out-of-the Woods, and a pacing mare by Jim Dunn's blind stallion, conditions were entirely different. There were no blanks in the warrants given owners in that circuit. Every one won something; perhaps not much; perhaps only a few feeds of oats, a yard of ribbon or a tin-cup record, but all were happy, contented and willing to try it again. We always had a race and generally as many as we wished. There were class events, specials, local events with no one barred, exhibitions, amateur races and classes for rough riders. Even the Indian drivers are accommodated through "The Tall Corn Circuit" just as they are down the "Big Line." They have a very clever way of doing things through "The Tall Corn Circuit." If only three horses are entered and the conditions call for five, we pay up two dead entries, cut the money into three pieces and race for the benefit of the few suckers that may always be found at harness meetings. I found the men racing through "The Tall Corn Circuit" an unusually clever lot of fellows, capable, accommodating, strictly honest and willing to race most any way in order to start their horses. Not one of them, so far as I learned, went back on his word when it was given to a comrade. While careful to live blameless lives in the sight of each other, they seldom failed in working the association and the tenderfoots. How I admired their business acumen! It is a decided pleasure to race under such environments.

You can always count on a little easy money at each place in the circuit. It is never necessary to telegraph home for expense money. I would much rather race my horses through the "Tall Corn Circuit" and be absolutely certain of a small roll of money, together with my railroad fare to Gumbo Flats, than take chances of leading my stuff home from Brighton Beach or Readville. There are a number of luxuries found along the "Big Line" that are not obtainable through the "Tall Corn Circuit." Champagne and Key West cigars are two minor items that are missed where I raced the past fall, but the stuff that made Milwaukee famous appears good enough to chase the alkali dust from one's throat. The grassy lawns and flowering beds of the East are especially noted by their absence. The judges are not on "a salary," but one may reach them just as easily and effectively. The tracks are not so well thrown up at the turns nor so wide through the stretches, and the stabling not so elaborate. The purses are not so large, the flagman and the clerk of the scales nowhere around to cause uneasiness, and the bookmaker is not the only man that profits from an afternoon's sport. Taken as a whole, there are many advantages to be found at the "Tall Corn" meetings, and there are many circuits not so favorable for racing a sore-toed trotter that wants to pace, a dinky pacer that actually dreads a race that is won on its merits and a good green horse that you have along for educational purposes.

News From the North.

[Portland Rural Spirit.]

E. E. Smith has returned to California with his stallion, Prince Charles 2:17 by Charles Derby.

C. W. Welby is driving his stallion, Yukon 2:14, on the road this fall, and he is a trappy looking fellow on the road.

Chief Peo peo-tal-akt of Nez Perce offered Senator Helman a whole band of horses for Mack Mack during the senator's visit up there.

J. A. Baddeley has sold the good little race mare, Oveta 2:14¼ by Caution, to Arthur T. Vrondvold of Clarkston, Wash., for $600. We understand Oveta will be trained and raced next year.

Captain Jones, one of McKinney's best sons, will be placed in the stud early in the season next year, either at Portland or Salem. Captain Jones is one of the best sires of uniform quality that has ever stood in this State, and his colts all possess speed.

Trainer Ed Parker is at Mr J. B. Iverson's stock farm at Salinas handling a bunch of yearlings that is considered the best ever raised on this farm, where many high class trotters and pacers have been produced.

The racing men ought to try the Hart Apartments this winter; 3 and 4 rooms, private baths, telephone, steam heat, first class. 750 Ellis street. *tf

Sweet Marie's Future.

William Garland owner of Sweet Marie says: "The mare arrived home all right and in perfect health. She is now running out in a paddock, with her shoes pulled off and will remain there until about January 1st, when we will take her up and begin jogging her. About February 1st, we will begin to work her slow miles, and May 1st, I will ship her across to Alta McDonald, who will handle her in all her races or exhibitions, whichever we decide on. It is Mr. McDonald's belief that I should send the mare over there by April 1st, but I am inclined to think that is just thirty days too early, for the reason that the big change in the climatic conditions governing the two extreme sides of the country at this season of the year is many degrees apart. I doubt if I will ship Marie direct to Albany when I do send her. I am inclined to think it would be best to send her to Memphis, Tenn., for a few weeks, then to Columbus, O., for a like period, and then send her to Albany. I have confidence in Marie's ability to do still better another year, still her performances of the season just closed were marvelous, and I recognize that she is now where speed of most extreme nature is necessary to make only a medium showing, setting aside improving the work of this year. Naturally when I say I expect, or at least have confidence in her doing still better another year, I mean that she will reduce her prasent record, and possibly retire the greatest and fastest trotter we ever saw. It would be almost impossible for her to improve upon her season's work just closed. She met but one defeat in all her starts, and I think demonstrated clearly that she was possessed not only with speed but was as game a trotter as ever raced."

Send Your Horse to a Trainer.

We frequently receive queries dealing with faults in the gait of young horses, mostly of the driving order. We are always glad to answer any query that may be propounded, but we would suggest that those who find that their young horses are faulty in gait will do much better to submit the matter at once to some reputable trainer whose business it is to correct such faults and make young horses go clean and clear. There are certain rules that must in most cases be followed in dealing with faults of gait, but there are also a thousand circumstances which may not be described and which may so directly affect the fault in question as to render useless any advice that may be given at long range and in ignorance of them. The development of trotters and pacers has been improved and extended to a marvelous degree within the past decade. In almost every town of any size there is some one who makes a profession, if not of training such horses for racing purposes, at least of getting them to go straight and to the best advantage. The friendly advice of such men generally costs but a trifle, and is more apt to prove of benefit than that of some one who never saw the animal in question, knows nothing of his conformation or breeding, of the going on which he must travel, and can only reply in a general way and according to rule. Few young horses go clean and clear at first when broken, and the sooner faults in gait are corrected the better it will be for horse and owner. Therefore we suggest that, whenever a colt seems to be worth it, and on breaking exhibits some fault in gait likely to lower his value, the wisest course is to show him to some competent trainer and follow the advice given.—*Breeders Gazette.*

Exports of Horses.

Horses to the number of 31,650 and valued at $2,308,383, were exported during the eight months ended August 31, 1904. The European countries are all short of good draft and coach horses, and if we only had enough good horses above our own market demands the export trade would take 10,000 to 15,000 per month. While they are taking about 625,000 of beef cattle a year, with twice as much dressed beef, we can export 150,000 to 200,000 horses if we can only raise the horses and breed them good enough to suit the European markets. Farmers who breed high-class horses will be sure of high prices, as the whole world wants more good horses, and America is the chief horse breeding country that breeds the improved breeds to suit the world's best market with size and beauty.

A meeting will be called of secretaries of Montana Fairs for the latter part of December or the first of January for the purpose of arranging dates for the Montana circuit. The dates the past two years have either conflicted or have been such as to make extra transportation of horses and exhibitors and in some cases the Fairs have failed to have good fields for that reason. If Anaconda has a meeting and the talk about the Butte track re-opening materializes, Montana could organize one of the best circuits in the country.

Shoeing Young Horses.

A horseman says that trouble comes in this work when there is improper handling the first time the colt is shod and that before the colt is taken to the blacksmith for the first time he should be prepared for shoeing by handling his legs in such a careful manner that he will understand that he is not to be harmed. The rule invariably is to take the colt to the blacksmith first. This is a poor plan. We have found the following method to be an excellent one in preparing the most vicious colts for the shoeing. Tie a long strap around the colt's neck, passing it along the near side and between the hind legs, bringing it to fit close to the body; then pass it under the strap which is around the neck; then tighten up the strap gradually, holding the colt by the bridle. The colt will probably pull a little, but speak to him kindly. When he has become accustomed to the strap lower it to a point just above the hock and gradually pull upon the strap until you have lifted the leg, at the same time pull back or to the side on the bridle to keep him from stepping ahead; then take the leg in your hand. The same thing can be done with the other leg, and after the process has been gone through several times you will be surprised to find how easy it is to lift any of the colt's legs.

How to Oil Harness.

As a preservative of leather, oiling the harness is a very useful thing. But there are many ways in which harness is oiled, and not all are good ways. The following, however, may be vouched for to be all right: Take the harness to a room where you can unbuckle it and separate the parts completely. Wash each part well in luke-warm water to which has been added a little potash. Scrub well with a coir brush until all grease and dust has been removed. Work the pieces well under the hand until they become supple. It won't do to oil it until it becomes so. Let the parts dry in a place where they will do so slowly. When just moist, oil. For this purpose use cod liver oil. It is the best for the purpose. Besides, if you were to use neat's foot, the rats and mice are your enemies at once, while they will not touch a harness oiled with cod liver oil. Give a good dose of oil to all parts, then hang up to dry. When dry rub well with a soft rag. You will have a splendidly-oiled harness.

The Mule.

The mule, apparently without any kicking, if price is a criterion, is rapidly ennobling himself. In fact, if values only are considered, not many years will elapse before only the very rich can afford to utilize him, and then only as a carriage animal. The officer in charge of an exhibit made by the quartermaster's department of the United States army, at St. Louis, says that the records of his department show that the average cost per head of pack mules to the government in 1898 was $72.93, since which time it has gradually increased. The average price paid by the government for that class of animals during the first six months of 1904 was $118.05. While the price paid for the draft mule in 1898 was $99.84 per head, during the first six months of 1904 they brought, on an average, $160 86. This officer is of the opinion that good draft mules will bring next year $200, while pack mules cannot be had for less than $130 each.

Some of Them.

Next season should see some high class four-year-old trotters striving for the money, and on the showing made this year in their three-year-old form the following will be expected to give a good account of themselves: Glory Quayle by Re-election 2:27¼, Alice Edgar by Moko, Totara by Bingen 2:06¼, Wilteen, The Hermit by Adbell 2:23, Jessie Benyon by Moko, Gazote 2:16¼ by Nazote, Madge Wildfire by Berton, Major Guethlein by Alfred G. 2:19¾, Ormonde by Wilkes Boy 2:24½, Grace Bond 2:09¼, Alta Axworthy 2:10½, Princess Athel 2:14 by Directum Kelly, Lord Revelstoke 2:16¾ by Bingen 2:06¼ and May Earl by San Mateo 2:13¼. Of course there are many others, but those named performed so creditably in their races and work that they can not be reckoned otherwise than first class.

Without the horse there would be no civilization, is the dictum of Professor Goode of the University of Chicago. And he fortifies his position by a comparative study of the nations, past and present, which have subjugated the waste places of the earth, reclaimed the desert steppes and plateaus, overcome the dangers of drought and famine, exterminated the beast of prey, tamed the wild herds that roam the plains and made them tributary to the uses of man, and produced strong, vigorous, free and unconquerable races of men.

Common Sense Methods of Selecting and Training.

It has often been said that no man should enter into the breeding and training of horses unless he be judge enough of the horse to get what he desires, writes a western breeder in the *Drovers' Journal*. I would go still farther—and I believe it is far more important—that he be able to select animals suited to the buyer.

The value of the majority of horses depends upon the demand for the particular class to which they belong.

Too many look only at the outward appearance of horses, especially when dealing in young ones. This fact is proven over and over every fall at the public sales, when the weanling and yearling of equal breeding sell for the same money.

A foal that has been by the side of its mother during the whole summer is far prettier to look upon than the yearling, which is especially rough and ungainly at this age if it be from draft stock. And that is just where so many make a mistake in buying; they pay a year's keeping for looks, and at the end of the year find they have the looks of the other colt instead of the sleek little beauty bought.

A fashionable color with desirable marks and perfect mane and tail are great factors in the make-up of the horse for whatever purpose. But what will all these avail the owner if the animal lack in bone or is poorly muscled?

Every person before they assume the risk of investing their money in horses should find out if they know what constitutes a horse of value on the open market. That is where the majority of horses sell. If you buy without judgment it doesn't insure you a buyer of the same type.

From the amout of so-called horsemen that play a losing game when buying for speculation, one would infer that they studied this noble animal with the same profoundness of the schoolboy, whose essay ran something like this:

"The horse has four legs, one on each corner—a head in front and a tail behind." This ended the essay, also his observations of the horse.

The individual horse has its peculiarities of temperament as well as human beings. Intellectual development differs widely in the one as in the other. Any horse will respond to kind treatment more readily than the lash, but the latter is very much more harmful when applied to a high-spirited animal. It is the horse that has been roughly handled that snorts and wheels away when the master enters the pasture. Do not think that you can beat them today and they will forget it tomorrow. A horse always reflects the character of the owner, if he owns it for any length of time or during its training period. Give a horse gentle but firm treatment and it will obey and delight in it. Personally, I was always partial to a mild-eyed horse that had a broad forehead, rather wide between the eyes. They seem to develop a good deal of sound sense.

Foals raised upon the farm are fondled from birth. They struggle fiercely at first, but it is only play for a man to hold them. They soon give in and watch for your coming and feel slighted if they are not noticed.

Serious accidents are often avoided by accustoming colts to be handled. A little girl once saved a colt from almost certainly being crippled. It had in some way gotten through a wire fence, and was whinnying and running wildly, dashing against the fence in order to get back to its mother which, in company with a herd, was dashing up and down the other side, when with ready wit, the child, picking berries near by, seeing the peril of her pet, called to it by name; it came to meet her; she took off her apron and tied it around its neck and led it quietly to the bars and saved a valuable animal.

A foal brought up from birth in contact with man is more easily handled when the day comes for it to assume the duties of a horse. It may suddenly develop an innate stubbornness, equal to that possessed by any range horse. You have only that to contend with, while in the foal unused to being handled you must overcome its fear of you, which is not such easy work as it might be.

Horse "breaking" is not what it was on the farm ten years ago. They are not here to break, but just as fast as the number decreased in that ratio their value increased. Five years ago farmers were tumbling over each other to see who could get rid of their horses first. Even the best young mares were "sold for a song," and their owners are finding out now that it was the same tune the old cow died on. Many years must certainly elapse ere the farmers of Iowa retrieve the fortunes lost by being eager to dispose of their best mares.

Little colts are very scarce comparatively. There has been so great a shrink in the number of broodmares that many are buying animals from the range for breeders. It is to be hoped that the farmers will not again become price chasers and run prices of the medium class of horses sky-high to find themselves in a few years the owners of inferior herds which, I believe, will always sell for less than cost of production I would urge every one to let all inferior animals go and retain only the very best they are able to procure. The loss will now be only on the single animal when, if retained as breeder, the loss will be felt in a heavier degree on all its offspring. Any doubters will be convinced of this if they watch the report of the auction sales of Chicago, which is to the value of live stock what the heart is to circulation.

A stimulant to that market in way of Eastern or foreign buyers is reacted upon the farmer in a very short while. They will notice also and be convinced that in horse breeding, as well as any other work, there is always room at the top, and if any peddling or unsatisfactory prices are reported the medium and inferior grades suffer more and sooner. Even should they sell at reasonable figures, they do not return to the breeder the just profit a better horse would.

The draft horses of today are considerably larger than they were a few years ago, brought about by continually breeding up. These are sought for eagerly by buyers, and if the bone is ample to sustain their enormous weight they go now at a handsome price. I believe these conditions will continue.

The same may be said of carriage, coach or saddle horses; the best is wherein the profit lies; but they are harder for the average breeder to produce. The free action, the power of endurance and the proud poise of head, along with well-kept coat and gentle disposition, so essential in horses of this class, are in a great degree dependent upon education that the man who breaks his foals at the plow can not hope to attain.

A good driving horse must be developed by a good driver. A good saddler is more made than born, but most often spoiled. The training of these is better accomplished if left to one who can occupy plenty of time with them. When once they are developed the owner need not fear he will fail to obtain recompense. Machines to replace these animals will come and go. They are fads for a while and may always remain in some particular way of use, but there is just one thing lacking in them that the inventor will never be able to add, and that is intelligence. These inanimate vehicles will tire their owner just as a child wearies of its inanimate toys. All well enough for a time, but they will not replace and hold our affections like living things.

Man and the horse have been too long inseparable to wander far apart. I do not know how early in the history of mankind that he took up horse breeding, but they were engaged in this industry heavily when the book of Isaiah was written, for there we read that "Their land is also full of horses; neither is there any end to their chariots," which shows that he was man's dependence for traveling even then and he had already grown rich in number. Do not fear that the day of usefulness of the horse is over. Too long he has shared our lot in war or peace to be lightly cast aside. A better type will be demanded and produced. The world is looking to America to provide these. Everything favors us except our own panicky tendencies. In our haste to get rich in a day we hastily drop a good thing for what seems better. Often it is but jumping out of the pan into the fire.

Hang to the good horse. When we sink in the mire he may balk or hack for a while, but he is certain to pull you through at last.

Horse Apartment Houses.

For years now, with the steadily increasing value of the land, New York stables have been mounting higher and higher, and today six-story stables, with stalls for horses on two or more floors above the street level, are not uncommon, says the New York *Sun*. A six-story stable, a big one, for delivery wagons and trucks, lately completed, has stalls for horses on three upper floors, the second, third and fourth, with an aggregate capacity of 400 horses. The fifth and sixth floors are used for the storage and handling of wagons and of feed, and for other incidental uses.

The ground floor is used for the storage of wagons and for hooking up, and here also are the offices. There is a 14-foot basement, which is used for the storage of trucks. Altogether the building has accommodations for 200 or more vehicles.

It is lighted throughout by electricity with switchboards on every floor, so that a whole floor or any section of it may be lighted as may be required. The building is equipped throughout for lighting by gas, but when the fixtures had once been put in place they were all taken off again, to be used only in case of emergency, so that there should be no occasion for the use of matches. They take no risk of fire.

The floors are of concrete, 6 inches in thickness. The stalls for the horses are of different sizes, suited to the horses occupying them, whether they are light wagon horses or big, heavy draught horses. The gangways between the rows of stalls are wide. The runways leading up from the ground floor to the several horse floors are wide, and the size of the building makes it possible to give them an easy slope.

The building has two big electric elevators on which any vehicle brought into it can be taken to or from any floor. The elevators are also used for bringing down feed from the feed floor, except as to oats, which are sent down through chutes, each with a sifter attachment for cleaning them at the bottom, from which they fall into cars in which they can be wheeled along the gangways. On every floor there are refuse chutes leading to the ground.

The building of the deep basement story for the storage of trucks, in this building, presented a little problem in drainage. Going down so deep they went six or eight feet below the level of the sewer running through the street on which the stable is located, and they had to have some way of getting rid of water used there in washing the trucks. They built below the level of the floor in one corner a reservoir big enough to hold all this water, and installed in connection with it an automatic electrical pump with pipe connections, suitably trapped, leading to the sewer. When the water in the reservoir rises to a certain point it closes a circuit and starts the motor that runs the pump, which runs until it has emptied the reservoir and then automatically stops. And so, except when there's washing going on, the floor of the basement is as dry as a bone. While they have this pump here to keep the reservoir empty, they also have in the basement another automatic electric pump to keep the tanks on the top of the building full. In the basement of the building are the lockers for the drivers, modern, ventilating lockers, with wire-paneled doors.

Night is the busy time in this stable. By day, when most of the vehicles are out, there isn't so much doing; but when night comes things begin to get very active. Almost all the outfits come back to the stable between 4 and 6 p. m., practically in a bunch One of the big elevators opens on the sidewalk. As the trucks come back they are run in upon that elevator as fast as they can be handled and dropped to the basement to be washed and there stored for the night. A truck can be washed here in short order.

All the wagons and trucks have to be arranged finally in the order in which they are to go out in the morning. Any horse in any stall can be got at and got out at any time; but the wagons and trucks must all be in order. Some may go out at 7 o'clock, some at 7:30, some at 8, and so on, and obviously it would not do to have a wagon wanted at 7 o'clock somewhere over back of the twenty-two wagons that did not go out until 8 o'clock.

So all these wagons and trucks must be properly stored; and this is a work that calls for the exercise of constant care and watchfulness and skill in the handling of the vehicles on the basement floor and on the ground floor, and in the cutting out of the vehicles on the upper floor for sending down to the washers on the ground floor.

Every night, on all those floors, they go through all the motions of a gigantic fifteen puzzle, with the wagons and trucks for blocks; but they are used to it, and they know how to do it. Every night they solve the puzzle and get all the trucks and wagons just where they belong, and the first horse down in the morning and every horse after him finds his wagon right where it ought to be, in the front rank, and he is hooked up and sent out promptly, and without any fuss or trouble.

Pretty Good for an Old Man.

The most remarkable mile of the year to saddle was accomplished last week at Columbus, Ohio, when Henry C. Shepard rode the pacer Don N. a mile in 2:12, just two seconds faster than the world's record established by C. K. G. Billings at Memphis with Greenline. The mile under any circumstances would have been considered as an exceedingly remarkable performance but the fact that Mr. Shepard is seventy-eight years of age renders the feat nothing less than astounding. On the day that Mr. Shepard rode Don N. the weather conditions were far from favorable for a championship performance and the track was very cuppy. That it was no scratch performance is best attested by the fact that on the week previous the father of the Secretary of the Columbus track rode the roan gelding a mile in 2:12½. While the performance, unfortunately, is not a record as it did not take place at a regular meeting. However, it was a well attested performance witnessed by some two hundred and fifty persons and at the July meeting at Columbus next year Mr Shepard hopes to be able to ride Don N. a mile in 2:10, a feat he considers easily within his grasp if weather and track conditions are perfect and the pacer is as good as he was the other day.—*Chicago Horseman.*

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Coming Events.

Rod.

April 1—Sept. 10. Oct. 16—Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1 April 1—Trout season closed

Sept. 1—May 1—Open season for shrimp.

July 1—Jan. 1—Open season for black bass.

Aug. 15—April 1—Open season for lobsters and crawfish.

Nov. 1—Sept. 1—Open season for crabs.

Sept. 10—Oct. 16—Close season in tidewater for steelhead.

Sept. 10—Oct. 16—Close season for catching salmon.

Oct. 16—Nov. 15—Close season for taking salmon above tide water.

Nov. 15—Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1—Feb. 15—Dove season open.

July 15—Nov. 1—Deer season open.

Sept. 1—Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15—Feb. 15—Open season for quail, ducks, etc.

Bench Shows.

Nov. 16, 19—Boston Terrier Club. Specialty show. Boston, Mass. Walter E. Stone, Secretary.

Nov. 22, 25—Philadelphia Dog Show Association. Philadelphia, Pa. J. Sergeant Price, Secretary.

Dec. 6, 7—Bay State Co-operative Bench Show Association. Brocton, Mass Tom B. Middlebrooke, Clerk.

1905.

Jan. 19 20—Bay State Co-operative Bench Show Association. Lynn, Mass. Tom B. Middlebrooke, Clerk.

Jan. 24 26 Rhode Island Kennel Club. Providence, R. I. H. M. French, Secretary.

Jan 25, 28—National Fanciers and Breeders Association. 5th annual show. Chicago. W. K. L. rules. T. A. Howard, Superintendent. Chicago, Ills.

Feb. 13, 16—Westminster Kennel Club. New York City. Robt. V. McKim, Secretary.

Feb. 21, 24—New England Kennel Club. Boston, Mass. Wm. B. Emery, Secretary.

March 1, 4—Long Island Kennel Club. Brooklyn, N. Y. Jos. M. Dale, Secretary.

March 8, 11—Duquesne Kennel Club of Western Pennsylvania. Pittsburg, Pa. Fred'k S. Stedman, Secretary.

April 19, 22—Atlantic City Kennel Club. Atlantic City, N. J. Thos. H. Terry, Secretary.

Field Trials.

Nov. 14—Illinois Field Trial Association. 6th annual trials. Robinson, Ills. W. R. Green, Secretary, Marshall, Ill.

Nov. ——Indiana Field Trial Club. Field trials. Clay City, Ind. C. F. Young, Secretary, Clay City, Ind. Week following Ills. Cb. trials.

Nov. 17—New England Beagle Club. 11th annual trials. Grafton Mass.

Nov. 15—Michigan Field Trial Club. ————, Mich. Chas. E. Sisson, Secretary, Muskegon, Mich.

Nov. 15—Central Beagle Club. 9th annual trials Sberodsville, Ohio. A. C. Peterson, Secretary, Homestead, Pa.

Nov. 22—International Field Trial Club Ruthven, Ont. W. B Wells, Honorary Secretary, Chatham, Ont.

Nov. 29—Virginia Field Trial Association. Martinsville, Va. C. B. Cooke, Secretary.

Dec. 3—Continental Field Trial Club 10th annual trials. Thomasville, N. C. John White, Secretary, Hempstead, L. I.

Dec. 12—Alabama Field Trial Club Huntsville, Ala. J. M. Kirkpatrick, Secretary, Huntsville, Ala.

Dec. 12—Pointer Club of America. 5th annual trials. C. F. Lewis, Secretary. Barber, N. C.

Dec. 17—Eastern Field Trial Club. Waynesboro, Ga. Simon C. Bradley, Secretary-Treasurer, Greenfield Hills, Conn.

1905

—— ——American Field Futurity Stake. For Pointers and Setters whelped on or after January 1, 1904, whose dams have been duly qualified. Am. Field Publishing Co., Chicago.

Jan. 9—Pacific Coast Field Trials Club. Bakersfield, Cal. Albert Betz, Secretary. 201 Parrott Bldg., San Francisco, Cal.

Jan 9—Texas Field Trials Club. 3rd annual trials. Near San Antonio, Tex. T. A. Ferlet, Secretary, San Antonio, Tex.

Jan. 10—Georgia Field Trial Association. Albany, Ga. P. M. Essig, Secretary, Atlanta, Ga.

Jan. 16—United States Field Trials Club. Grand Junction, Tenn. W. B Stafford, Secretary-Treasurer, Trenton, Tenn.

Gun Barrel Making in Birmingham.

The following article is from one of the few makers of Damascus gun barrels now in Birmingham, and was written in answer to a discussion on the prospects, or rather the retrospects of the trade.

Many sportsmen, no doubt, may be interested in part of the history of the Birmingham gun barrel trade, showing its rise and fall. To the best of my ability will I give an account of it, dating from the year 1787.

Steam engines at this time were not so general as now, so that the power was obtained from water mills. There were, in the year 1787, twenty-seven gun makers in Birmingham, and all the guns were made, bored and ground at water mills. The material used was mostly charcoal iron. For plain and figured barrels the iron used was as follows:

Stub, stub twist and Damascus. Stub twist was then made of old horse shoe nails and steel cuttings about two inches thick and a quarter of an inch in breadth, the two were mixed up together and balled in a furnace, and the bloom drawn out under the forge hammer. If the balls were very large, or the stubs or steel of inferior quality, the iron would not be good.

Stub twist barrels were made in a strip, which was twisted round a mandril and then heated and welded together.

Plain stub barrels were made of the same iron, which was forged in a strip and welded longitudinally.

Damascus and wire twist made by piling plates of iron and steel alternately, the plates being about three inches broad and a quarter of an inch thick. From 16 to 20 of these were piled on top of each other they were then placed in a furnace and raised to a welded heat, drawn down under a forge hammer and rolled into square rods according to size of barrels required.

The wire twist was rolled so as to show the edges of the different plates on the flat of the strip, so that when it was welded together it looked like a coil of wire from one end of the barrel to the other.

Damascus was rolled into square rods and cut into suitable lengths, heated white hot and twisted until they became round like a screw, two or three of these were welded together, and then rolled down to flat rods to size required; these were then coiled round a mandril and welded in the usual way.

About the year 1815 a great deal of iron was made from swarf and filings, which were first washed and then mixed with scrap, made into a ball and welded in a smith's forge; this was called "swarf ball drawing;" it made very good iron and was used by lock forgers, and occasionally made into barrels for fowling pieces.

In the early time of the barrel trade there were a number of small forges for making barrel strips by tilting. One in particular was at Wednesbury Bridge, worked by a Mr. R. Adams, who no doubt saw what the trade required. At the time of the close of the French war he began to make twist iron as a trade, and the firm continued to make it up to very recently. Before this, the iron had been made at various forges, but no one made a specialty of this kind of iron. Another iron called silver steel was made about 1830, I believe, by laminating Swedish iron and steel like Damascus, but not in so many plates. It was very good; the figure was not much better than the iron that is now called single iron Damascus, but it was very strong.

The silver steel made at a later date was rolled into a square seven-sixteenths and worked like Damascus; two rods were welded together and rolled down to the size required, and welded in the same way as other twisted barrels. About this period, firms began to make a specialty of iron for sporting gun barrels, in small quantities, viz.: skelp, iron Damascus, stub Damascus and Damascus. Skelp Damascus is very similar to stub twist. Iron Damascus is the cheapest figured iron, welded in single strips.

Damascus is the finest and most expensive barrel of the present day. It is beautifully curled in figure, and is a barrel that will stand a greater strain than any other The best Damascus iron, as said before, is constructed of plates of iron and steel placed alternately on top of each other, but the steel should be of the best old style of make. The present make of steel in making up into gun iron partially melts and runs away, leaving only iron with dross between, which constitutes the faults found so frequently in the Damascus iron.

At the present time I believe, the Belgians use iron only, but of two different kinds, so that when worked together they show differently when the acid is applied in the browning of the barrel to fetch up the figure, but the barrels are very soft and not nearly so durable as the English. I have seen English Damascus that has been in use thirty or forty years in better condition than the Belgian that had only two seasons wear.

I have noticed since the makers of gun iron have adopted the use of the new materials instead of the old, the iron has been very faulty and in fact sometimes useless.

To be good for the purpose, it should be made in small quantities at a time, with good weldable material and rolled out very carefully, so that the layers do not get twisted in going through the rolls, and care should be taken that the billet is not fanned out at the sides, as all this has a tendency to rob the finished barrel of the beautiful curls to be seen in the figure.

Welding. Best barrels are welded by coiling a strip round a mandril; when the mandril is withdrawn it has the appearance of a flat spiral spring. It is then heated to a welded heat in a smith's fire, taken out and humped up on an iron plate, and then hammered round on a tapered mandril. About three inches are welded at a time, and of course, this process is repeated until the barrel is completed.

Boring and setting. After the barrel is welded it is bored and straightened. It is roughly bored inside with a square boring bit, or rymer of suitable length revolving about 500 revolutions a minute, which is forced through the barrel. The fine borer then examines it, sets or straightens it, and then it is spilled up, a process the same as rough boring only the revolutions are greater, a piece of oak wood being put on one side which causes it to cut much more evenly. The workman then sets the barrel and finishes the boring, which is done at a speed of 70 or 80 revolutions a minute. The bit only cuts on one edge at a time, it is made sharp, and a deal spill is put one side and packed with paper as the boring proceeds. The barrel is examined and set several times during the operation.

The process of fine boring is the same now as it was in 1790 that is, it is done with a square bit, but only two edge cut and only one is used at a time. The advantage of taking off the edge was said to have been discovered about 1790, by a Mr. Beesley, and this was kept a secret by good workmen for a long time.

The setting of a barrel is a very important matter, as the regularity of the inside all depends on a good workman. It is done by the shadow, or reflection cast down on the inside from a top light, and it is an art which can be only acquired by long practice and perseverance. So delicate is the test, that the distortion produced by warming one side of the barrel with a common candle is distinctly perceptible. Independently of its practical utility, the shading of a gun barrel is an interesting optical problem.

Some men have worked at the trade all their lives and never learned to set a barrel correctly.

The history of boring and setting I cannot attempt to give, but setting I believe does not date back much more than 100 years. In 1793 setting was known, but was a great secret—those who learned had to pay for it.

The first person as far as I can glean who did set was one named Phillip Parsons, who worked at Duddeston Mill, being what was called a "best workman" on sporting barrels. Mr. Parsons used at first a string or wire, which was drawn tight by a bow, or otherwise, and applied to the inside of the barrel. By this means he discovered the crooks and then corrected them with a hammer.

Turning and grinding. The barrel being perfect inside it is then made to correspond outside, which is done by turning it on a center in a lathe, and afterwards grinding it level on a grindstone. It is then proved and the lumps and ribs fitted and soldered into pairs.

The manufacture of these barrels gradually increased, and just after the American war was a flourishing trade here and continued to improve until the American tariff was adopted. This was a great loss to the trade, as it practically shut us out.

A great quantity of double and single muzzle loading shot barrels were made until about twelve years ago, when alterations were adopted in the proof requirements, which necessitated more work and incurred extra expense, which the gunmaker would not agree to pay, therefore, this particular branch has gradually decreased.

Humboldt County Fish Conditions.

Many of our sportsmen and fishermen are deploring the fact that steelheads are becoming scarcer in Eel river with every succeeding season, and it is feared that this gamey fish, good both for food and sport, will soon be entirely extinct unless the matter is taken up by the proper authorities and measures taken to perpetuate the species. The State Commission is devoting its efforts to the propagation of small trout and salmon, and it is given out that there are not sufficient funds to permit the hatcheries to look after steelheads. These fish are certainly among the best fish that swim, and it would be a good plan for the legislators who are to represent this county in the next legislature to bestir themselves in the matter of securing an appropriation for their propagation. As stated above lack of funds is said to be the reason why these fish have been allowed to become almost a rarity in Eel river, and there is no doubt that every effort would be made by the State Commission to replenish the stream if the money part of the affair could be arranged. One theory advanced by some to increase the number of steelheads is that seining and gill-netting in Eel river be suppressed for a number of years, but when it is known that the returns from the salmon and steelhead industry nets the county between $70,000 and $80,000 a year—nearly all outside money, too—it is plain to be seen that such a move is entirely out of the question. A State appropriation is what we need and what we must have if steelheads are to be plentiful in Eel river as in years gone by. Furnish the money and the Price Creek hatchery will do the rest, Deputy Fish Commissioner Huestis, so well informed regarding the salmon fishing industry in this county, tells us that some means should be found to prevent fishermen from taking these fish above the Schuler ferry, at Rio Dell, he as well as others considering this one of the greatest detriments to the business. When the salmon reach this point in the stream they are virtually on the spawning grounds and in consequence in no fit condition for food. The Board of Supervisors have the power to regulate this matter, and it is undoubtedly a subject that should not only be closely investigated by them, but acted upon at once. Poor fish have done as much and probably more toward keeping the price down in San Francisco than any other cause. When salmon are allowed to lay for a day or two after being caught and then placed in boxes and tramped down in order to make room for more, they are not exactly in the pink of condition by the time they reach the city, and can hardly be expected to command a very high price.—*Ferndale Enterprise.*

GAME OF THE YUKON.

F. C. Selous, one of the most noted hunters of big game in the world, while stopping at Winnipeg recently on his journey towards England on the evening train in response to an interview among other things remarked: "I am going home for the winter," said the famous sportsman. "There is still chance for much sport in Canada, but there was no possibility of remaining any longer in the north unless I was to remain there until next season. I lingered as long as it was possible in the northern woods, but at last was compelled to come away. I went up a number of tributaries of the Yukon for many miles, chiefly with Indian guides, partly to see the country, of which so much has been said, and partly on hunting expeditions. It is said that there is a possibility of the diminution of the gold supply of the Yukon, but it seems improbable that there will soon be any diminution of the game. The country will always be attractive to the adventurous traveler and the hunter, and will always possess a great fascination for sportsmen. One feels as far from the busy haunts of man on the upper Yukon as in any portion of the world. The silence of the primeval forest still exists unbroken by any human sound. The game is sufficiently plentiful so that there is no object in shooting it, except what may be necessary for food. I think of going home to England for the winter, and I sometimes fancy I have done my last hunting."

Comment on Proposed Changes in the Game Law.

ED BREEDER AND SPORTSMAN (City)—*Dear Sir*: Referring to the annual meeting of the California Fish and Game Protective Association, which was held in Visalia last week, I desire to call your attention and also the attention of the sportsmen at large, to the following matters of importance.

I note that the association desires to reduce the bag limit on ducks from fifty to twenty-five birds. I wish to enter a protest against any such amendment to the game law, and I shall do everything in my power to defeat it. There is no doubt at all amongst people who hunt ducks, that there are more ducks than ever before. This is due to the fact that there is more irrigation than formerly, and more shooting clubs that have ponds and wells. Without doubt the ducks are scattered over this State very much more than formerly, and more shooters, in various localities, are obtaining splendid duck shooting.

In connection with this game law, it may not be amiss for me to state that I have yet to speak to a single duck hunter who has not objected to this clause of changing the bag from fifty to twenty-five ducks, and we certainly intend to do everything in our power to defeat this law.

It seems to me that if Mr. Payne, and the gentlemen associated with him, would pay more attention to enforcing the present game law, that they would have about all they could do. There is no necessity of changing the present game law. It is a splendid one in every way, and only needs to be enforced, and certainly it is not being enforced. Mr. Payne knows this as well as I do, and he knows where he can put his hands on illegal game almost any day. If he does not, I will be pleased to inform him, if he will call on me in person.

Another thing, if the gentlemen who form this Association desire to do some good, and prevent the useless slaughter of ducks, and the breaking of the law, they should stop the illegal netting of ducks by Italian fishermen on this bay and Coast, particularly in San Francisco bay and the Sacramento river.

Another arbitrary and un-American measure which they propose, and which I, and the sportsmen associated with me, shall do everything to defeat, is the proposition of taxing or licensing anyone using a gun outside of the county in which he resides.

It is apparent to all, that this clause is aimed at the sportsmen of San Francisco, who naturally have no shooting whatever in the County of San Francisco, and are obliged to go elsewhere in this State, for their shooting. It will certainly not hotber the interior shooter, but inasmuch as nearly half the population of this State reside in San Francisco and its immediate vicinity, it will certainly be objected to by the sportsmen of this territory. It is an un-American clause and has no place upon the statutes of this State.

There is ample work for Mr. Payne and his associates if they will only enforce the present game law, without trying to introduce any foreign ideas into this territory.

While on this subject I may state that only yesterday I had a conversation on this subject with a prominent sportsman, who stated that it looked to him as though Mr. Payne and the other gentlemen connected with this Association, had gone mad on the subject of game protection, and in his opinion, the public at large would not tolerate any such radical changes as proposed by the Association. In fact if it came to an issue between the gentlemen who compose the Fish and Game Association, and who have received the support of all fair-minded sportsmen—there is small doubt that on the proposed changes mentioned above, they will find the majority of sportsmen of this vicinity, ranged against them.

I consider the change making the open season for deer, August 15th, a good one. In fact the season could be opened in July in the Northern counties, without doing any harm to the young deer. I also commend the protection of song birds, and the opening of the trout season on May 1st. I believe both these changes are moves in the right direction.

In conclusion I beg to state that I believe that the California Game and Fish Protective Association have done, and are doing good work, and I am certain that if they try to introduce such measures as they now propose, that they will lose the support of the majority of the sportsmen of the State of California. As stated above, I have yet to meet a shooter who has not objected to the change on the bag limit and the licensing of guns.

Yours very truly,
PHIL. B. BEKEART.

DUCKS PLENTIFUL.

As one argument showing that the birds are still plentiful enough to stand the present demand, a prominent Los Angeles sportsman gives the following account of wild duck conditions in the south:

"Another big flight of widgeon drifted into the Bolsa and Newport districts, Tuesday evening, November 7th, at sundown like a great cloud of fog coming in off the sea. Dozens of duck hunters, delighted at the sight, stood in front of their clubhouses and watched the incoming thousands, drawn up in almost military order, the ruddy gold of the setting sun gilding their snowy breasts as they sailed on stiffly set wings, curving into the fresh-water ponds below, while the stirring music of whirring wings and the silvery calls of the pretty little things one to another floated down like feathers freed by shot.

"It was a wonderful sight, and one that no duck hunter having once watched could ever forget. Where the birds came from no one knew; they swung in directly off the ocean, apparently thousands of them, an endless succession of good-sized bunches; ducks in sight as far as the eye could reach. The bulk of the flight seemed to be widgeon, though there were other varieties with them. Sad to say, most of the migrants stopped over night only. Wednesday is an open day in the Newport section, and the rousing shotgun reception the visitors received was warmer than most of them bargained for. Where they went is shrouded in the same mystery as the place from whence they came; like a bank of fog they blew in and like it again most of them dispersed."

They probably took flight to the Colorado delta marshes, or the innumerable lagoons and marshes of Lower California, across the line.

Game Law Changes.

The proposed game law changes advocated by the association styled the California Fish and Game Protective Association have created an almost unanimous antagonism on the part of the sportsmen at large who resent the extreme measures decided upon at the recent annual meeting of an organization that claims a membership of 10,000 sportsmen (there are at least 100,000 sportsmen in the State) and were represented at Visalia by the presence of only about 50 delegates. The general body of devotees of rod and gun will not tolerate the self arrogated authority of the minority who seek to carry ultra game and fish protection to the end that sports afield may only be indulged in by a favored class.

The principal antogonism has been shown against the reduction of the bag limit and the license to be imposed on the shooter who seeks his sport outside of his own county. This will affect principally the shooters of San Francisco, Contra Costa and Alameda counties—a body of possibly 15,000 regular and occasional devotees of the sport.

While there is good reason for imposing a tax on aliens and there can be no objection to an annual tax or license on sportsmen non-residents of the State, the imposition of a license on local and state shooters is unwarranted. The paying of the license money into the Fish Commission treasury and for the use of the State Board is a specious plea to cover an un-American measure. The State Board certainly needs more money but let the annual appropriation be increased from the proper channels.

If the state and county officials would properly exert themselves there would be a far better general observance of the game laws than there has been. The present laws are acceptable and with a few minor changes could serve for years to come. The fault of non-enforcement of the law lies much with officials throughout the State. For the past ten years changes have been loudly advocated and introduced at each session of the legislature. In the main the laws have been a dead letter, the "apostles of game protection," however, have gallantly come to the front every session with a lot of changes and attendant penalties provided—the results have generally been the same. From this experience it strikes us forcibly that those gentlemen who are so considerate and enthusiastic in their game protection views have great ability to talk and suggest what should be done and less desire to carry out what they have advocated when it has been granted.

The non-sale of all game is another bone of contention that has aroused much opposition. This question is in this State a broad one, and we believe for the present such a sweeping change is too radical.

The claim that the proposed changes will be in the interest of a favored class is possibly not without foundation. And right here we are reminded of a certain statement made by Mr. Henry M. Keller of Santa Monica, who was present at the Visalia meeting.

Several years ago the California Fish and Game Protective Association met in this city, at the Olympic Club, there was present less than twenty members.

In discussing the effect of a proposed change in the game law, which was presented to the meeting, Mr. Keller was asked by one of the gentlemen present, if the suggested measure would not work a hardship on the sportsmen who were not men of wealth.

Mr. Keller replied that it was the misfortune of those who had not the means, if the measure advocated would militate against their indulgence in the recreation.

Another instance may be quoted. Mr. Bruce Cornwall, in a lengthy type-written reply to an editorial in the BREEDER AND SPORTSMAN, stated that "no sensible advocate of game protection has in recent years advocated such protection for the purpose of preserving any 'valuable food supply for the people.' The idea that game is to be protected principally because it is a valuable food product is ridiculous, and you must know it. *Game is not a popular food supply, but rather a luxury for wealthy homes and clubs and restaurants.*"

The phrase "popular food supply for the people" was for years the slogan of Mr. H. T. Payne. That has been dropped for the good of the cause, and the non-sale war-cry of all feathered game has incongruously been substituted in its stead.

The press of this State have published much adverse comment on the proposed changes and in doing so have in a number of cases wrongfully attributed the movement to the efforts of "the city sportsmen." As a matter of fact there was a very small representation of sportsmen from San Francisco and its vicinity at the recent game law convention (?). It is very noticeable that for years past the meetings of the association have been so far away from the metropolis and the larger cities that the attendance of "city sportsmen" has been exceedingly limited. The reason given for this annual sequestration by the "steering committee" was that if the meetings were held in a large or central city, the country sportsmen would claim that they were being huncoed by the city fellows.

Talks to Dog Owners.

Two great elements in connection with the successful management of dogs—namely, feeding and exercise—have already been touched upon, but a good deal more remains to be said on the subject of condition; in fact, a great deal more than can possibly be touched upon here.

Assuming that the commissariat department is in satisfactory order, and that the amount of exercise he gets is enabling the dog to feed well and to lay on muscle, some elementary advice may be offered upon the subject of improving the coat. To commence with, it is essential that a dog should be well groomed at least once a day. If this is neglected his hair is likely to become clogged and matted, and the skin beneath it in an unhealthy state Everybody, moreover, brushes his own hair, and horses are always groomed, so why should not the coats of dogs receive attention? Unfortunately, there can be no doubt that the art of applying a brush to the coats of dogs is one that is abused by certain operators, inasmuch as wire is often substituted for the innocent bristles, with the result that a great deal of hair which is not dead, but simply superfluous from a showman's point of view is removed. Now, the removal of superfluous hair which is not dead is not allowed in the case of animals that are exhibited; and therefore, the beginner who wields a wire brush and applies it too vigorously may unconsciously incur the penalties of disqualification if it is proved against him that he has taken out live hair from the coat of his favorite.

Having alluded to the improper use, or it may be said the abuse, of the brush, it is time that the advantages of that instrument should be alluded to. To commence with, it may be observed that different sorts of coats require different brushes. For big, strong animals of the short-coated varieties, the ordinary body brush, with a piece of webbing at the back, as used in stables, will be found very useful in cleansing the skin and imparting brilliancy to the hair. In the case of the long-haired breeds a dandy brush is the thing to use, whilst the coats of the smaller varieties can be treated with one of the ordinary hairbrush pattern, the length of the bristles being dependent upon that of the coat. A hair glove is likewise a most excellent thing to use; but whatever form of brush is applied, the task of brightening up the jacket is always facilitated by the application of a leather rubbed well into the coat the way the hair runs, and not against the grain. Hand rubbing is also an effective means of improving the gloss on the coat and lay of the jacket, but it takes time, and some dogs decline to stand still with their tails towards their keeper, as he presses his palms along their backs and sides. The grooming of all dogs that are intended for show should be a daily duty to their keeper, as the friction not only keeps the coat in good order, but improves the tone of the system.

The promiscuous use of a comb in the hands of a beginner has brought disaster upon many a kennel, and more particularly when the teeth are of metal. When such is the case the comb is a far more dangerous weapon than the wire brush, and it is to be feared that the owners of over-coated show dogs apply their combs in a fashion that is not fair to those who play the game and only remove the dead hair from the coats of their show animals. It is rather a moot question whether too much combing, even under the best of conditions is not both unnecessary and objectionable. There is, in the first place, always a good chance of its injuring the skin of the dog; and, in the second it causes the animals a good deal of pain when a comb is applied to matted tufts of hair. In such cases, too, there is always a strong probability of so much coming away that bare patches are left, and so the best way to deal with matted hair is to manipulate it with the fingers, and, if necessary, to reduce it partially by the use of the scissors. It is not allowable to cut the hair of a dog that is intended for show purposes, so it is risky to rely upon the scissors unless the condition of the coat renders it necessary to do so. Whilst upon this subject, it may be observed that singeing, dyeing, and pinching the coats of show dogs are all prohibited, and therefore the beginner is not a wise man if he indulges in any of such practices.

There is an art in washing dogs, just as there is in most things in connection with the management of a kennel. One great point to be remembered is to supply plenty of water, and if it is possible to provide two tubs for the ablutions, it will be so much the better. The baths or tubs should be large, and if they are raised upon chairs or trestles over a drain, it will be easier both to scrub the dog and to empty them out afterwards. The latter operation is facilitated by having a hole, which can be plugged by a cork, in the bottom of the tub, and this is easily arranged if the bath is a wooden one. The first water should be fairly warm, and should be deep enough to come as far as the dog's stomach. In the second bath there should be a good supply of tepid water for rinsing purposes, in fact this water may be quite cold if the weather is warm and the animal a strong one. A sponge or a basin of some kind—a jam-pot will do—should be provided, and also a sufficiency of clean towels for drying the patient after the operation, and with these, with one exception, the list of accessories is complete. The exception is a piece of good sound soap, and for the purpose of washing a dog there is nothing better than sunlight soap, but the old-fashioned blue-mottled, now so seldom procurable, is excellent. Some people add soda to the water, but many object to it on the ground that it is injurious to the coat and upon the whole it is best to avoid the use of soda. It is better to leave the face and head to the last, as then the soap which finds its way into the eyes is quickly removed in the subsequent rinsing,

and the dog is kept in discomfort for a shorter period.

As soon as the dog comes out of his bath the water should be pressed out of his coat by the hand, and he may be allowed to shake himself, if the attendant does not object to getting wet; but care must be taken to prevent his running away and rolling on a dirty bed or on the ground. When thoroughly dried, the dog should be give a clean bed, else his bath will not have effected its object; and before replacing his collar on him, if he wears one, it should be thoroughly cleansed, else his neck will be stained.—*English Stock-Keeper.*

DOGS ARE A MANCHURIAN STAPLE.

In Manchuria dog raising is practiced upon pretty much the same scale as sheep raising in Australia—proportionate to population, of course. A bride does not take her dowry in specie or land. Dogs are the dowry—six if she be the daughter of poor parents; more if they be wealthy. The animals serve as meat for human consumption. Their magnificent coats are converted into rugs and what not. Forty to fifty thousand dogs are so utilized, it is said, every year.

WADS THAT ARE CONSUMED.

Wads which break up or are consumed on the explosion of the charge in a gun have at various times been tried, but they do not seem to have materially affected the pattern or penetration of the shot. In the working of artillery the charge was formerly put into duck bags, but it was found that the material was not entirely consumed on discharge, and sometimes pieces were found in the breech of the gun in a smouldering state. Now, as the result of experiments, the bags are made from a cloth woven from threads obtained in a process very similar to that followed in the manufacture of artificial silk. The difference is that the artificial silk is made from cellulose. In the manufacture of each the glutinous compound is forced through tiny holes in a steel plate, forming tiny threads which, when they become dry, are exceedingly strong; indeed, it is claimed that when spun their tensile strength is equal to that of silk, which they resemble in appearance, their color being creamy white. Furthermore these threads are said to be very similar to the product of the silkworm. It is further claimed that this cloth, if worn by women as silk is worn, would outwear the latter, so tough and flexible is it; but this is not likely to be done, for a yard of the material will burn like a flash on being exposed to the flame of a match, leaving scarcely any ash. It is probable that if experiments were made with gun wads made from a similar material, it might result in an improvement in the shooting of cartridges loaded with such materials.

THE FLOUNDER IS A QUEER FISH.

The expression "as flat as a flounder" has become proverbial, but it does not apply to very young flounders, which differ so much from the adult ones that they can hardly be recognized as belonging to the same family as their parents. Most boys and girls are familiar with full-grown flounders, but very few of them and few older people know anything about the appearance of young flounders and the wonderful transformations they undergo. In spring and summer it is possible for young nature students to secure specimens of newly hatched flounders by dragging a fine mesh net on sunny days when the water is smooth. Such specimens may easily be kept alive in dishes of salt water, and examined from time to time with a low-power microscope.

The flounders begin life as do ordinary fishes. When they first emerge from the egg they swim vertically, with the head turned upward. Their bodies are symmetrical and their eyes are on opposite sides of the head. Gradually the position of the body changes from vertical to horizontal, the fish remains thus for some time, swimming like ordinary fishes; but while still very small there is foreshadowing of the bottom life they are destined for, and they enter upon a series of remarkable changes. The most striking of these changes is in the position of the eye.

The eye of one side or the other slowly but steadily moves over to the opposite side of the head and takes a place beside the other eye. In some flounders the eye moves around the front of the head; in others it moves directly through the head. This shifting of the eye's position is accompanied by a change in the position of the body, which ceases to be upright and becomes more and more oblique. The side of the body from which the eye is moving gradually becomes inferior to the other, until by the time the change of the eye is complete the fish swims with the blind side underneath, and this position is ever after maintained. The flounder then ceases its free swimming habit and sinks to the bottom.

Some species of flounders are rightsided and others are leftsided. In the rightsided forms the left eye moves to the right side and the left side becomes uppermost. In the leftsided species the opposite conditions prevail. It rarely happens that rightsided species have leftsided individuals, and vice versa. In a few species both rightsided and leftsided fish occur in about equal numbers.

Bears in Yosemite Park.

The bear has come to his own again. And, though his own coincides with a cherished possession of the United States Government, his bearship is welcome and will not be molested.

The return of the bear to Yosemite valley not only adds interest, but it also directly justifies the name of the valley. Before the white man came, says tradition, a young brave, armed only with a club, had a conflict with a monster grizzly under the Royal Arches. The battle was long and fierce; the terrific claws and the crushing hold of the giant bear were met by the slender young hero with light-footed evasion, now to this side, now to that, with an occasional blow delivered with all the force of his stroog arms. Again and again he parried instant death, and struck at the dripping jaw and the great skull, till at last he gave the death blow and the snarling brute sank to the ground. Then he returned to the tepees of his tribe and told of the deed. His fellow-tribesmen gave the hero the name Yo-sem-i-te (large grizzly bear), and in the march of time his descendants, the tribe, and their valley home took on the name.

Since then times have changed in the high Sierran valley and with the Indians who once dwelt between Yosemite's stupendous walls went the big game which shared with them what nature gave to all her mountain children. But last year there was a recrudescence of bruin in the Yosemite. Late in the fall two showed themselves and one was trapped. The other retreated shyly to the shadows whence he came, but reappeared at times, uneasy, slinking, to seek food of human production. This season the bear tribe seems to have returned in earnest. All summer long two cinnamon bears have frequented the vicinity of Glacier Point, making regular explorations near the little hotel in search of food.

A month ago a camp, maintained by a carpenter at work on El Capitan bridge, was entered at night and despoiled of various edibles suited to bruin's appetite. With the advent of autumn and especially since the heavy storm, the bears are leaving the higher mountains and incidents have multiplied. Tracks of single bears and of a bear with a club have frequently been found on the road at the foot of El Capitan, and a bevy of children out on a Saturday frolic on horseback in that locality returned abruptly with an excited bear tale. Every few days Indians tell of seeing one or more and a few days ago three children going to school at noon met a full-grown bear, which turned and, sitting up in a sociable fashion, looked at them in wide-eyed curiosity. Its tracks measured eight inches. The same day five different people saw another bear ambling through the orchard near the old Hutchings cabin in plain view of the villiage.

The new Yosemite bears seem to be aware of their immunity from firearms within the National and State parks, and are not in the least belligerent.

Scores by Those You Know.

On the grounds of the famous Old Kentucky Gun Club, Captain A. W. Du Bray and Mr. Duncan, shooting for the Lyons cup, tied on 20 straight pigeons at 31 yards rise, 30 yards boundary. Both contestants shot Parker guns, and on the shoot-off Mr. Du Bray won the event. This is pretty good shooting and is hard to beat.

Captain Du Bray, in shooting for the above cup, has scored 45 out of 47, killing 46, one falling dead out of the boundaries. Again on the famous Old Kentucky Gun Club grounds, at an invitation shoot on October 27th and 28th, Dr. Duncan, shooting the Parker gun, scored 25 straight pigeons at 31 yards rise. In the Kentucky Futurity, at 50 pigeons, Mr. J. Q. Ward of Paris, Ky., shooting the Parker gun, won the handsome cup, scoring 47 at 31 yards. The second prize in this event was won by Mr. W. B. Allen, shooting the Parker gun, with a score of 46.

Some Points About a Good Gun.

The system of taper boring used on the Ithaca gun gives a closer pattern, with loss contraction of muzzle. This insures better penetration, less recoil and less strain on the barrels.

The new stock fastening makes it impossible for wood to swell away from the frame in damp weather.

All Ithaca guns have concave, matted ribs, which absolutely prevent cross-firing. Every gun is self-compensating, taking up its own wear at every point.

If you do not know what gun to buy, order an Ithaca and a gun of any other make, compare them, and if the Ithaca is not the best by all odds, return it.

Good Ammunition Gets Good Bags.

What Winchester "Leader" shells are good for. Opening day, Alvarado, nine men, 450 ducks. Every man with the limit bag, and every man, without a single exception, shot nothing but the reliable time-tried Winchester "Leader" shell.

A Gun Cabinet.

In a dark corner of the closet, perhaps or in your Victoria resting on some shelf, is your favorite. Not neglected, for you take pride in the pattern, balance and many days of exhilarating sport you have had afield with your best hammerless. You take good care that it does not rust or pit during open season, but when game laws mark the time for laying away your outfit, would it not add still more pride to the memory of past seasons to have a place fit for its occupancy?

As a true sportsman from your youth, your gun, rifle and fishing tackle have undergone the most careful study; all the many improvements to make a trip to forest, marsh or stream a delight have been your pleasure to examine and number among your possessions. When this collection is complete, will anything do to keep it in for next season?

The Shreve-Barber Company, 739 Market street—521 Kearny, street this city, have a line of the best cabinets for sportsmen that have ever been put on sale. All sportsmen are cordially invited to call and examine these cabinets.

In this column we give small reproductions of the E. I. Du Pont Company's and the Laflin & Rand Powder Company's calendars for 1905.

The regular size of these calendars is 15x28 inches and they are in from twelve to fourteen colors. In the past these artistic calendars have been much in demand by sportsmen all over the world. The attention of those who desire one or both of these handsome calendars is called to the advertisements of the Du Pont and Laflin & Rand powder companies on page 16.

DuPONT CALENDAR FOR 1905

LAFLIN & RAND CALENDAR FOR 1905

THE FARM.

Results in "Test A" of the Dairy-Cow Contest.

The results in "Test A" of the dairy cow contest at the World's Fair at St. Louis have hrought welcome relief from a strain npon the minds of many partisans of the Jersey cow. That, during the 120 days of the test, the Holstein cow Shadyhrook Gerben should have made some 2½ lbs. of hutter fat more than the hest Jersey, which hy the varient scale of over-run still gave her a lead of ahout five ounces in estimated butter, was a disturhing incident. But as "Test A" was for the "economical production of hutter" after charging up food cost, less by-products, to each cow, the Jersey men were still rather confident of success. Their anticipations have heen justified. It is found that four Jerseys have returned a higher profit on their yields than the best Holstein, or than any cow of any other hreed. The hest Jersey, Loretta D., heats the hest Holstein hy a net profit of $4 50. The Holstein champion is fifth in order and, after her, ten Jerseys follow in succession of precedence before another Holstein gets a place. The Holsteins have one cow in the best fifteen and three in the hest twenty. Tne Jersey team of twenty-five cows averege per cow a far higher profit, in "Test A" than either of the other breede of which the Holsteins numbered fifteen, the Brown Swiss five, and the Shorthorns twenty-five, though one of the latter died while the test was in progress. But Shadyhrook Gerhen is a husiness cow and may give the Holsteins a leading place, when the profits are computed on 'Test B" to determine "the economic, production of milk for all purposes of dairying."

HARK COMSTOCK.

A Bulletin on Hog Diseases.

It is impossihle for the farmer to have too much good literature pertaining to livestock matters in his home. We would emphasize the word "good" hecanse there are hooks and papers on the market from whicb very little material of value can he gleaned.

Among the worthy things that have come from the press recently is a hulletin published hy the Indiana Experiment Station on the suhject of "Swine Diseases." It has heen prepared by Drs. R. A. Craig and A. W. Bitting, and after a very close perusal of its contents we are free to recommend it to our readers. There is scarcely a disease that is common to swine in this country hut what is discussed in detail, the cause, symptoms and treatment heing fully given. Although, doubtless, it is scientifically accurate, yet it is written to interest and instruct the practical man, and for this reason we would like to see in the library of every one of our readers who raises hogs. Douhtless the demand for this hulletin will he great, and it is possihle that it will exceed the supply. Nevertheless we suggest that a card he dropped to tbe Director of the Experiment Station, Lafayette, Ind., requesting a copy of hnlletin No. 100, on "The Diseases of Swine."

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1 50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. ☞Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O

The Unthrifty Pigs.

In every hunch of pigs there are usually a few that never do so well as the balance. These are not only an eyesore to the owner, but they make the herd uneven when it comes to selling time. Once they get hehind, the larger pigs see to it that they are kept in the rear, and from day to day it often happens that these pigs seem to grow smaller ratber than larger.

There are two ways to handle these runty fellows so that they will in the end afford a little profit. One method is to make them an extra creep so that they can run daily with the other pigs, but have their feed apart. Their small size will admit of this arrangement. If the other pigs are heing fed largely on dry feed it might he an excellent plan to give the little fellows some slop once or twice a day, and nowbere will a good condimental food do more good than in this case. Indeed, it just seems to be the thing, along with an easily digested food, to start these pigs off.

The other method is to simply shut them up hy themselves in a yard, asso ciated with clean sleeping quarters, and feed them largely on slops. A laxative food, such as oil meal or germ meal, will contrihute mnch to their general thrift. Of course, we realize that it takes some extra work to care for these pigs shnt in a pen hy themselves, and the lahor comes at a time of year when work is pushing; nevertheless, it will be profitable lahor, hecause if these runty fellows are allowed to go with the others what feed they do eat is practically wasted. It might not he out of place to try a little worm powder, hecanse worms in many cases prove to he the sole cause of unthriftinese.—*Des Moines Homestead.*

———o———

The shortest wools grown are used in felts, hats, etc., and the fall California and Texas wools. They can he used in certain proportions, however, in clothing in conjunction with straight clothing wools. As every ones knows, shorter wools can he comhed now than was the case years ago, with the improvements in comhing machinery and the fact that a wool may he shorter is hy no means such a defect as it would have heen years ago. The shortest territory wools are southern Utahs, hut some of them are quite fine and have heen in good demand the past few months among mills where length of staple was not especially desired. They are not quite so fine as some of the other territory wools and are apt to have a long hair here and there occasionally, hut not enough to materially class them as kempy.

———o———

It is a curious fact that a seedling grape is seldom of the same type as the grape which produces the seed from which it is grown. A dozen seed from the same grape, if planted, will prohahly produce as many different kind of fruit, ranging all the way from white to deep purple. More than likely, all of them will he worthless, either for eating or wine making. Viticnlturists declare that if they get one valuahle type from a thonsand seedlings they are quite satisfied. When a good type is developed it is propagated hy cuttings, which always remain true to the parent type It was hy taking advantage of this fact that the present great varieties of American grapes bave heen developed.

Live Stock.

All kinds of stock do hetter, if watered just before feeding.

The most profitahle pork does not attain to two years of age.

The most successful feeding is a well-balanced ration, with hay, followed hy a good drink of water.

Salt fed to pigs or cattle should not he placed on the ground. It ahsorhs undesirable elements from the ground.

Plenty of feed makes plenty of exercise necessary. Rapidly growing stock need more exercise to produce even development.

Pens for hogs should be made secure when hogs are first put into it. If they get out a few times they are very difficult to control.

It is not a good practice to bave horses out in the cold and storms. They should have shelter. The idea that it toughens them is absurd.

To produce pork qnickly, and economically, the hogs must not only he healthy hut must he ahle to digest and assimilate all the food they eat.

It is contradicted that a hoar should he thin in order to hreed well. If he and the dams are mature and in good flesh the hest results are ohtained.

A sheepskin can he put to good use by having it made into pads to be used in case of sore shonlders, sore hacks, or rubbed places anywhere.

Teams natnrally put down the head while drawing a heavy load. A tight check rein should never he used for work horses. Let it he loose if used at all.

One sbeep or two may appear to thrive under almost any circumstances. But a large flock must have constant care from one who understands his husiness.

As soon as frosty nights come, stock of all kinds should have shelter at night, and turned to pasture during the day. The first cold storms, and sudden changes are especially to he guarded against.

It is unfortunate to let horses have long seiges of standing still. Some arrangement should he made hy which they may move around. Long standing prodnces stiffness, lameness and causes stumhling.

Graveled feet come from not shoeing often enough. Feet should he examined frequently to keep them free from stones and injurious lodgements. It is better for the horse to go bare-footed than to wear ill-fitting shoes.

A thin skinned horse should never he curried with a sharp curry comh, or ruhhed too roughly. He should he thoroughly cleaned with a stiff hrush or a broom brush. A rough comh will make him more tender, and will canse bim to dread grooming.

Sheep, heing close grazers, graze so closely that weeds eaten off hy them in the summer seldom sprout again.

The secret of the good sheep flock oi some raisers is that they cull and select and eliminate, and cull until nothing inferior remains.

Tne same smith should shoe the horses all the time. Not every one does it properly. It may take several shoeings to get it just right. If he understands his husiness, he will know when it is right and will shoe in that way all the time.

It is a mistake to nrge a horse beyond his natural gait. It may take him longer to make the trip hut when he has made it, both the horse and he driver will he in hetter condition if he has been permitted to travel at his natural rate of speed.

It has been found that horses are either right footed or left footed in starting, just as men are right or left handed. It is practically impossihle to change them. The hest plan is to let him work natural. The stronger side determines how he will step off.

With horses one good currying is equal to two quarts of oats. It certainly will he found heneficial in keeping a horse in good condition. It stimulates the circulation and opens the pores so as to make the general condition vigorous.

Chicken Chatter.

The ben that will pay has a bright red comh.

The man who advertises is the man who sells his stock.

It generally takes eight weeks to grow a squab broiler.

April and May yon will get the best price for hroilers.

Don't breed from pullets when you desire strong chicks.

A year-old cock and a two-year old hen is an excellent mating.

Don't try to keep two breeds when yon know how to raise only one.

Better kill that inferior stock than your reputation hy trying to sell it.

Your laying pnllets should he separated and fed to promote egg production.

Know the reqnirements of yonr market and then breed to those requirements.

If you pack fowls while still warm tbe skin will become very much discolored.

For the American market the yellow-skinned fowl has much the better sale.

Unless you wish to depreciate the value of your birds don't ship hens and cocks together.

A dressed bird shonld never have dark pin feathers in it, as it gives a dirty and unattractive appearance to it.

Patience first, then watchfulness, care and hard work is wbat makes the poultry industry a profitahle investment.

Broilers that are out in tbe early part of December should be ready for market hy the first part of February.

Have yonr poultry ready when the demand for it is greatest; it is "Johnnie on the Spot" who succeeds in this work.

It is claimed that equal parts of red pepper, alum, rosin and sulphur will cure chicken cholera. Feed a tahlespoonful of this mixture in three pints of scalded meal every day.

Sales of Live Stock.

Peter Saxe & Son of this city bave sold to Mr. Fred Harvey of Galt the imported Short Horn hull "Ada's Lavender" No. 177,272, a grand auimal. Also sold to E. A. Selfridg, Jr., of Willits, the thoroughbred Berkshire hoar "Sambo 16th," a good one, 10 months old; also to Wm. Russ of Enreka four tboroughbred Shropshire hucks.

The shrinkage in cattle is less if feeding is begun early. A small feed each day will enable stock to make considerable gain, while a lack of it will produce a loss. Probably there is no time of year at wbich a small gain does more good than when it begins to turn cold.

———o———

Horses may go blind because of had ventilation in the stable.

Jackson's Napa Soda untangles the feet.

FOR SALE.

One-man Moyer Bike Speed Buggy; used three months. Can be seen at Studebaker's.

FOR SALE.

ONE OF THE BEST BRED TROTTING FILlies on earth. Perfect in every respect. Sired hy one of California's greatest sires. First, second, third and fourth dams are producers of early and extreme speed, and have twenty in the list. Combines the three great strains—Electioneer, Wilkes and Nutwood. She is the acme of scientific breeding, will make a fast trotter and worth her weight in gold for a hroodmare. Fifteen great dams in her pedigree.

Also, Princess Leola, gray mare 5 years old, 15 2¼ hands, sired by Leonel 2:17¼; 1st dam Lady Dwyer hy Menlo 2:21¼, son of Nutwood 2:18¾; 2d dam Silver, dam of Marin Jr. 2:13 and Hattie F. 2:18 hy Silver threads, son of The Moor; 3d dam Gertrude, dam of California Maid 2:23½ and Native Son (3) 2:29¾ hy The Moor. A splendid roadster and a promising young broodmare; has had one foal; never trained.

And Juanita hy Gen. Benton 1755; 1st dam Juniatta, dam of Elector 2:25 by St. Clair 656; 2d dam Maid of Clay (dam of 4 in 2:30) hy Henry Clay 8, in foal to Lecco 2:09¾.

A heautiful yearling filly hy L. W. Russell, and a hay weanling colt hy the great Searchlight 2:03¼, a perfect counterpart of his illustrious sire. Both these youngsters are out of Juanita, and all are standard hred and eligible to registration. For further particulars address

C. C. CRIPPEN, Mayfield, Cal

Grading Up a Dairy Herd.

The best and only sure way to obtain good cows is to raise them. This is the concensus of opinion among dairymen. Even when one has plenty of means at his disposal it is a difficult matter to go out and buy a number of really good cows. Those that are for sale are not the best of the herd; it is as a rule the undesirable animals which the owner is willing to dispose of. Any man who starts to build up for him elf a dairy herd will in a few years, if he goes about it intelligently, have one of which he may well be proud.

While a herd of pure-bred animals is without doubt worth more money when it comes to a sale, still for all practical purposes the grades, judiciously selected, are the equal of their more aristocratic sisters. If there is in the neighborhood a first-class puro-bred Jersey or Guernsey bull it will not be necessary for the beginner to purchase such an animal; later on this will be desirable. Two or more men may unite in such a purchase, thus lessening the expense. For purely dairy purposes I should certainly recommend one of these breeds. While I have no notion of entering at this time a discussion upon the subject suffice it to say that for butter-making qualities when it comes to grading up from native cows the chance of getting first-class animals are much more certain with a sire bred for generations along that particular line for that special purpose. Since the sire is half the herd great care should be exercised in his selection. A few dollars one way or the other should not be considered in making the purchase. It is the future of the herd which is at stake. It will pay to get the best. See that he is not only a good animal individually, but he should be backed by ancestors which have proved to be performers of known excellence.

Having chosen the sire the next thing is to weed out the poor cows. One good one is better than two that are not paying their way and there are any number of the latter kind being fed and milked year after year if only the people who own them knew it. A Babcock test is indispensable to even the small dairyman. Test carefully, weighing the milk from each cow, which will enable you to tell exactly how much butter each is making per day. It will probably be somewhat surprising to note results of such a test. The cow thought to be the best of the herd because she gave such a nice mess of milk may test the lowest, while the one which was considered of not much account may prove to be the best of the lot. It is not always the best looking cow which makes the most butter, in fact it rarely is.

Not only a high percentage of butter fat but staying qualities should be taken into consideration. No cow should be retained in the well-regulated dairy herd which does not give milk for at least ten months in the year and none which shows less than 4 per cent of fat. Unless the milk yield is exceptionally good I should make the test 4 5 per cent instead of 4 per cent. When the heifers from this breeding come in milk at 24 months there will be increasing interest in developments. The scales and the test come into use again in determing which are worthy to be retained in the herd. While the amount of milk will naturally increase with the age of the animal until she reaches maturity the percentage of butter fat will not materially change. As before discard every animal that does not show better than a 4 per cent test.

Feed liberally to give the heifer a chance to show what she can do and keep her long enough to determine definitely as to her value. Endeavor to prolong the milking period as far as possible the first year, so as to establish a habit of long lactation, for a habit of this kind is quite possible. For this reason autumn calving is preferable since this means the fresh pastures of spring become available just when they are needed to provide a stimulus to the milk flow.

It requires some courage to cull out and discard animals in such a herd, but there should be no half-way measures. The unprofitable ones must go. There is no need of keeping any cow which at maturity will not make 300 pounds of butter in a year. I have known grade Jerseys to do even better than this.

So much for the breeding. If continued year after year a high class of dairy cows is inevitable, and besides this there will be developed a distinctive type, which adds to the outward appearance of any herd Of course as the old cows become unprofitable they must be disposed of.

But breed without feed is greatly handicapped. At all times and all seasons the dairy cow should be provided with plenty of good nutritious food and pure water. Lacking these she cannot do her best. In addition to these she must be kept reasonably warm, else her food is diverted from its legitimate use and goes to maintain temperature. There is no question about the highly bred sensitive Jersey requiring good care and she should have it. If she does not get it the loss is sure in dollars and cents to her owner.

Expansion of the Live Stock Trade.

During the last five years the pedigreed live stock industry in this country has expanded with a rapidity and solidarity which invest its future with large commercial interest. Since the inevitable decline two years ago in inflated values for pedigreed beef cattle wide distribution of breeding stock has been effected and an undercurrent given to the trade which will safeguard it against possible contingencies of years to come. It is not an exuberant optimism but judicial business acumen which sees in the trade as at present organized the elements of permanency, growth and pecuniary improvement. Every addition to the list of breeders contributes to the perpetuity of the industry and fortifies it against disturbances. The greater the army of breeders the greater its momentum, the stronger its resistance to adverse conditions, the safer its unified interests.

Thousands of farmers have become breeders of pure-bred live stock who waited patiently for that decrease in prices which placed registered animals within their reach. Geographically, these beginners represent agricultural America. Good blood has flowed in larger currents and extended to more new territory since its market value descended to what has been termed a sane business level than ever before in history.

Marvelous expansion has characterized the trade since the invasion of the farmer element was invited by the prices current the past two years. An army of soldiers is what constitutes an effective military force. It is the same in animal husbandry. It takes leaders and thousands of followers to make the pure-bred live-stock business safe and secure. Years ago the generals were too numerous for the soldiers and some animosity existed between the two classes of breeders. There were aristocratic breeders and plebeian breeders, the great and the small.

This was the result of boom prices, speculative adventure and spectacular transactions. Men with capital and credit and an appetite for this sort of financiering were attracted to it; frugal men with less instinct to gamble—the "small men"—were deterred from engaging in it. But a change has occurred; small breeders and stockmen in large numbers have become identified with registered live stock and class distinctions are fading away. The business is growing from the ground up; it is taking deep sure root; it has come down to the earth from its speculative height. A healthy tone pervades it and attracts men who formerly looked askance at it.

Whatever statistics may indicate, the fact is evident that there are more farmers breeding pedigreed animals today than ever before. A new era bright with substantial promise has been ushered in, and with old breeders and new ones working intelligently and harmoniously toward a common goal the meat-making industry in America may be said to rest on a basis as solid as the historic rock of Gibraltar.—*Breeders Gazette.*

Salting the Butter.

Small butter granules require more salt than large ones, says *Creamery Journal.* The reason for this may be stated as follows: The surface of every butter granule is covered with a thin film of water, and since the total surface of a pound of small granules is greater than that of a pound of larger ones, the amount of water retained on them is greater. Small granules have, therefore, the same effect as insufficient drainage—viz, washing out more salt The shape of the granules causes more water to be retained, hence we get a larger overrun from thick cream as the granules are more ragged in shape.

Weighing the Milk.

No man, no two men, no body of men can tell by looking at a cow or the pail of milk she gives, whether the animal is doing business at a profit or loss. A pail of milk is a very uncertain quantity, especially if there is froth on the surface, and little can be told as to how much fat there is in the milk by looking at it Nothing but the scales and the Babcock test will tell the dairyman just what his cows are doing; whether they are bringing in a profit or just boarding. The following from the *Nebraska Farmer* tells what the returns were from two cows whose milk was weighed and tested.

For nearly four years we have kept a record of the milk produced by each cow. I hesitated a long time before beginning it, fearing that it would take more time than would be profitable. But I find that by having everything arranged conveniently, it takes almost no time at all. The sheet of paper with each cow's name and a space opposite for each day in the month, tacked to a board, hangs just inside the barn door. A pencil tied to a string hangs over the paper, so that no time need be lost in looking for that. We use the cheap spring scales, and find that they weigh sufficiently accurate. They hang from the ceiling just beside the paper. We have two scales and two papers, one by each door, to save time. The can stands close to the door, outside except in the coldest weather, when we find it uncomfortable to open the door, and then it stands inside. Having every thing so conveniently arranged, the work of hanging the pail on the scales, noticing the weight, and marking it down, takes less time than it does to tell it.

The totals for the month are put into a permanent record, and at the end of each cow's year these are added, so that I know how much milk each cow has given.

At first I got the milk tested occasionally at the creamery or elsewhere, but this was not very satisfactory, and within the last year we invested in a ten-bottle tester. I haven't yet come to a point where I can see my way to take samples of all of the milk. We save samples of the milk of each cow for two or sometimes four milkings, twice a month, and take the average of these tests for the whole of the milk for the month. Although this is not absolutely accurate, it is probably sufficiently so for practical purposes. For saving the samples I use any small, wide-mouthed bottles I can get hold of, with the cows names on them in black paint.

The records of two of our cows may illustrate the value of keeping such records. An old Jersey cow that never gave a very large amount of milk even when fresh, came in on August 12, 1903. She did not give as much as 700 pounds of milk in any month, the best month being December when she gave 634 pounds. Her poorest full month was July, 1904, when she gave 501 pounds. She went dry in August and came fresh again September 7th. In the year she gave 7,201 pounds of milk. The average test of her milk was 5 per cent, making 360 pounds of butter fat in the year.

Another cow that came fresh in June, 1903, went dry in January, giving 5,468 pounds in the year. The average test was 3.8 per cent, making about 208 pounds of butter fat. The results from both cows were a surprise, The first one gave little at a time, but made it up by constancy and high quality. Although the second one went dry about four months, she gave a fair amount of milk in the year; but the low quality made it a poor year's work.

The Way to Fence a Farm.

I have no use for barb wire on the ranch except as a top wire to a smooth fence. The durability of a fence depends largely on the posts used. These should be the best procurable. The corner posts especially should be well braced and anchored. The wire should be well stretched as the life of a fence is much longer when the wire is kept tight than when allowed to be in a loose, slovenly condition. The most economical fence is the one which promises the greatest per cent of efficiency, safety and durability for the amount of money invested.

I would fence an open farm, provided I had the means to do so, as follows: I would first find the corners and outside boundaries of the place Then plow thoroughly pulverize and level the land on the boundary line. It should be worked at least one rod on each side of the fence line. It would be better if this preparation were commenced a year at least before fencing and the ground plowed and worked smooth two or three times during the year. It should then be seeded to a grass to do away with unsightly weeds along the fence. In working the ground I would throw the dirt from the center to the outside most of the time. When finished it would be smooth and even lengthways of the fence although lower in the fence line than on either side.

In this way the dirt would not work away from under the bottom wires of the fence, allowing a space for small pigs to creep under. With the ground worked smooth and even, the wire will fit close to the ground. All the labor expended in this preparation would be paid for at the time of fence building, as the ground is smooth and free from trash and the work can proceed at a rapid rate. I would build the boundary fence hog, dog and wolf proof—the best the market afforded. Having my boundary fence to suit me, I would then cross-fence so that I would have my pastures, alfalfa, grain and potato land, each under separate fence. Each enclosure would thus be ready to use for pasturing stock as soon as the crop is removed.

A good fence should have efficiency, safety, durability and economy. The only efficient fence is one that does the work for which it is intended. If it does not, the outlay of cash and labor has been in vain. The fence is a delusion and a snare and in fact a total loss as well as an eyesore to the farm. The safety of a fence is of great importance. I know several farmers who have lost enough money in horse flesh alone by unsafe fences to have fenced their whole farm with the best of woven wire These losses are mostly caused by barbed wire, but the majority of the barb wire losses can be avoided if the fence is put up in a workman-like manner—not less than three wires stretched tightly on good posts not over a rod apart, with the top wire high enough so as not to be an invitation to a horse to step over. But the average American delights in taking risks, even so far as to take the chance of losing a hundred-dollar horse to save one dollar's worth of wire or time.—H. C. Lydick in *Field and Farm.*

$2000 Added

To be Run THURSDAY, November 24.

For special trains stopping at the track take S. P. Ferry, foot of Market street, at 12, 12 30, 1, 1:30 or 2.

Returning, trains leave the track at 4:10 and 4:45 p. m., and immediately after the last race.

THOMAS H. WILLIAMS, President.
PERCY W. TREAT, Secretary.

TO TRADE FOR A BROOD MARE.

STANDARD-BRED GELDING 7 YEARS old by Prince Nutwood, dam by Strathway. Stands 16¼ hands high and weighs 1225 pounds. He got a record at Salinas, September 16th, of 2:31, jogged the last eighth. Has worked miles in 2:24, quarters in 33 seconds with six weeks' training. Promises to be very fast. W. H. Williams, who worked him on the San Jose track five weeks before the Salinas meeting, says that he looks like a 2:10 or 2:12 trotter. Good individual and will sell him at a reasonable price or trade for a high-class brood mare. This horse is in charge of W. H. Williams at the San Jose race track, where he can be seen. Address

HENRY STRUVE, Watsonville, Cal

FOR SALE.

ONE OF THE GRANDEST LOOKING AND finest bred young Stallions in California. He is 2 coming 3 years; chestnut with star, and one pastern white; good mane and tail; stands 15½ hands high; all sound, not a blemish; well broken; never worked for speed; a trotter. Sired by Nearest 2:22, brother to John A. McKerron 2:04½. First dam Princess Airlie by Prince Airlie; second dam Minnie Princess, dam of Leonora 2:25 by Nutwood 2:18¾; third dam Belle by Paul's Abdallah; fourth dam Kate Crockett by Langford by Belmont; fifth dam Fanny by American Boy Jr. Prince Airlie by Guy Wilkes 2:15¼; first dam Chantilly (4-year-old trial 2:19½, dam of Chanty (2) 2:24, Cascade 2:14¾) by Nutwood 2:18¾; second dam Crepon (dam of Lovelace 2:20, Betsy Britton 2:20¾, Brilliantine 2:29½) by Princeps; third dam Crape Lisse (dam of King Rene Jr. 2:17, Balzarine 2:27) by George Wilkes 2:22; fourth dam Tarlton mare, dam of Tarlton 2:30. Only reasons for selling is that I have another colt bred the same way and am overstocked. Address

T. W. HARSTOW, San Jose, Cal.

FOR SALE.

A HANDSOME 4-YEAR-OLD BAY FILLY; pacer; stands 16.2½ hands; sired by McKinney, dam Mission Bell by St. Nicholas. Full sister to Mechanic. A smooth-gaited filly, goes without straps or boots, and with less than a month's handling has paced a half in 1:11. Is sure to make a fast pacer. Address or apply to JOHN ROWAN, 1317 East South Street, Stockton, Cal.

THE AMERICAN THOROUGHBRED AND BREEDERS' HANDBOOK.

It is now nearly thirteen years since Col. Sanders D. Bruce published his book on "The Thoroughbred Horse," the editorial portion of which was cut bodily with a pair of scissors from the columns of the *Turf, Field and Farm*, of which he was part owner. I claim only one advantage for my book over his—that it is better edited. It will be properly classified under eight heads, with the English horse in a chapter by himself, the American horse in his own stall and his Australian congener in his own paddock. I shall receive orders for the insertion of stallions at their owners' request at a reasonable charge, of which breeders will be advised by circulars. The price of the book, which will contain some 310 pages, will be as follows:

BOUND IN LEATHER, per Copy......$7
BOUND IN CLOTH, per Copy.......... 5

The need of such a text-book will be conceded by every intelligent breeder, for it will be thoroughly up-to-date in every particular; and the reader will not have to look all through the book to find any given horse and shall see that it is properly indexed. One copy of the book to be given gratis to each advertiser and no payment asked till the book is received. All orders for the book or for insertion of stallions' pedigrees to be addressed to

Dr. Spencer's English DYSPEPSIA WAFERS

Relieves and cures Indigestion, Heartburn, dyspepsia and all Stomach complaints.

Price 50¢ per box.

BRITISH PHARMACAL CO. DISTRIBUTORS MILWAUKEE, WIS

CAN YOU ENJOY A SQUARE MEAL?

Do you sit down at the table with a fine appetite intending to enjoy your meal immensely and after a few mouthfuls give up in despair? That's a typical "well along" case of indigestion or dyspepsia. Hundreds yes, thousands are in the same boat and are willing to do almost anything to be as they used to—healthy, well and strong with a good sound stomach.

You cannot force your stomach to do work that it is unwilling to do. It has been tried time and time again, with the same results always. The stomach is a faithful organ, but when pushed beyond, and exerted to the utmost, it rebels. Some stomachs are stronger than others, but all have their limit and when the limit is reached it is unwise to attempt to force it into doing further work.

The best and quickest cure offered to that big army of sufferers is

DR. SPENCER'S ENGLISH DYSPEPSIA WAFERS.

If you haven't heard of this cure before, you have been needlessly suffering, for this medicine *will* cure you—cure you as sure as there's a sun above. Would you spend 50 cents if you thought there was some hopes. We know you would, and therefore tell you sincerely that D. S. E. W. *will* cure you.

The curing powers of these wafers are very simple to understand. They are natural in their workings and effects, taking up the work of the worn and wasted stomachs, digesting the food thoroughly and completely.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET.

IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS AND BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.

It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.

It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—A FOOT WHICH WILL STAND WORK on race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CERTAIN CURE for THRUSH and SCRATCHES

We Guarantee That It Will Do What We Claim and Will Refund Money If It Fails.

PRICES:—Quarts, $1 00; Half-Gallon, $1.75; Gallon, $3 0 2½-Gallon, $5.50; Five-Gallon, $10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.

Don't fail to read "ad." giving information concerning Campbell's Iodoform Gall Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

Isn't He Worth Saving?

ABSOLUTELY QUINN'S OINTMENT REMOVES CURBS SPLINTS SPAVINS WINDPUFFS BUNCHES

Why trade off or sell at a beggarly price a good horse just because he "goes lame," "throws a curb" or develops some other blemish? There is nothing in the way of Spavins, Curbs, Splints, Windpuffs or Bunches which will not yield readily and permanently to treatment with

QUINN'S OINTMENT.

Dr. E. H. Davenport, a prominent physician of Sheridan Ind., writes. "I have used a number of remedies for the removal of curbs, splints, thickened tendons and tissues generally, but for the last two years I have not been without Quinn's Ointment. I have tested it thoroughly at different times, and say without hesitancy that it is the only reliable remedy of the kind I have ever tried." Price $1.00 per bottle. Sold by all druggists or sent by mail. Write us for circulars, testimonials etc.

FOR SALE.

One-man Moyer Bike Speed Buggy; used three months. Can be seen at Studebaker's.

FOR SALE.

ONE OF THE BEST BRED TROTTING FILLIES on earth. Perfect in every respect. Sired by one of California's greatest sires. First, second, third and fourth dams are producers of early and extreme speed, and have twenty in the list. Combines the three great strains—Electioneer, Wilkes and Nutwood She is the acme of scientific breeding, will make a fast trotter and worth her weight in gold for a broodmare. Fifteen great dams in her pedigree.

Also, Princess Leola, gray mare 5 years old, 15 2¼ hands, sired by Leonel 2:17¼; 1st dam Lady Dwyer by Menlo 2:21¼, son of Nutwood 2:18¾; 2d dam Silver, dam of Marin Jr. 2:13 and Hattie F. 2:18 by Silver threads, son of The Moor; 3d dam Gertrude, dam of California Maid 2:23¼ and Native Son (3) 2:29¾ by The Moor. A splendid roadster and a promising young broodmare; has had one foal; never trained.

And Juanita by Gen. Benton 1755; 1st dam Juanitta, dam of Elector 2:25 by St. Clair 656; 2d dam Maid of Clay (dam of 4 in 2:30) by Henry Clay 8, in foal to Lecco 2:09¾.

A beautiful yearling filly by L. W. Russell, and a bay weanling colt by the great Searchlight 2:03¼, a perfect counterpart of his illustrious sire. Both these youngsters are out of Juanita, and all are standard bred and eligible to registration. For further particulars address

San Francisco, Saturday, December 3, 1904.

LOU DILLON IS COMING BACK to California to spend the winter. Mr. C. K. G. Billings wired the great reinsman Budd Doble at San Jose last week asking if he could take the world's champion trotter under his care, and Mr. Dohle replied that he could. A letter followed from Mr. Billings telling how he desired the queen of all trotters kept and Mr. Dohle immediately hegan preparing appartments for her at the San Jose track, and she is expected to reach there in a few days. Millard Sanders has signed a contract to train for Mr. John H. Shults, owner of Shultshurst Farm, the home of the great young stallion Axworthy, and his time will he completely occupied with developing the youngsters hy that horse. It is a great and a deserved compliment to Mr. Dohle that without solicitation or suggestion from him in anyway Mr. Billings has selected him to take charge of Lou Dillon, the most valuahle trotting mare in the world. The mare has not heen herself this year, hut as suggested in these columns some months ago, douhtless needs only the glorious climate of her native State to place her again in the condition which enahled her to show that marvelous speed and endurance which was the sensation of the trotting world in 1903. Mr. Dohle has prepared a luxurious place for her at his stables at Agricultural Park, and when she arrives the San Jose track will have an attraction that will draw during the winter thousands of people who will want to see the champion mare taking her exercise while guided hy the hands of the veteran reinsman who drove the mighty Dexter 2:17¼, the great Goldsmith Maid 2:14, and the peerless Nancy Hanks 2:04 to the championship records of their times, and who developed and raced last year his own horse Kinney Lou 2:07¾, the fastest entire son of the champion of all trotting sires, McKinney 2:11¼. The track at San Jose is one of the hest and safest on the Pacific Coast, and the climate of the Santa Clara valley cannot he surpassed on earth. In its halmy air and with an opportunity to often nihhle the toothsome native grasses of California, now nearly six inches high, and to have the very pick of the famous hay and grain produced in this State, Lou Dillon will quickly "respond to the treatment" and hy the opening of the racing season of 1905 he ahle and ready to lower all her former records. The horsemen of California hail the presence of the queen of trotters to her native heath and hope that her owner will make his contemplated visit to California this winter an extended one. He will find the latch string out on every horseman's door and carry home with him their hest wishes for a series of triumphs during the season of 1905 that will exceed those of previous years.

THERE IS A BRIGHTER LOOK to the affairs of the California State Agricultural Society since Commissioner W. W. Bassett opened hids for Agricultural Park at Sacramento last Tuesday. Two hids were made, one of $82,500 hy James McGillivray, and the other of $76,000 hy Clinton White, The Directors of the State Agricultural Society are highly pleased to receive an offer of $82,500 for the property, as that is considerahle more than they expected to realize for it. There are fifty-three acres in the tract. The hid will have to he confirmed hy the Superior Court of Sacramento county hefore the sale can be made, and there seems to he a prospect that the hid will he raised when the matter comes up for settlement, as it is understood that a representative of the Western Pacific Railroad Company may offer more in court. If the property is sold for the price offered it is said that all the hills owed hy the Agricultural Association can he paid, and with the $45,000 appropriated hy the State Legislature two years ago, another site can he purchased and $20,000 be left to expend for buildings. The Directors will accept the hid unless a larger price is offered in court and the chances are that hefore long the California State Agricultural Society will again he placed in a solvent condition. If this is done the State Fair of 1905 should he conducted on a new and hetter plan than the one which has put it in such had shape during recent years.

IF ANY trotting horse hreeder who thinks the thoroughhreds get all the hig money when they are offered for sale will get the November 26th issue of the *Thoroughbred Record*, printed at Lexington, Kentucky, and look over the report of a sale of thoroughhreds held there that week under the management of W. T. Woodard, he will come to the conclusion that thoroughhreds are not in such urgent demand after all, although racing is continuous in the United States from January 1st to December 31st. One hundred and twenty-four head at the sale mentioned averaged $187 62 per head, and of these forty-nine hrought $50 or less.

WESTCHESTER Racing Association's Stakes, which are advertised in this issue, will close Decemher 15th. Don't let this date go hy without entering in some of these rich running events if you race your horses in the East.

Mr. Dore Was Misquoted.

In the BREEDER AND SPORTSMAN of last week a criticism was made of the remarks of Mr. John Dore hefore the Elk Grove Farmer's Institute, as reported hy the Sacramento *Union*. In this connection we have received the following letter:

COURTLAND, CAL., Nov. 28, 1904.

EDITOR BREEDER AND SPORTSMAN—In your last week's paper I carefully read what you had to say in regard to Mr. John Dore's talk at the Elk Grove Farmer's Institute. I feel it my duty and privilege to correct the error as far as I can. John Dore is one of the most substantial men of our State and his sterling integrity is known to all of his acquaintances. He was misquoted. He spoke of attending a district fair some years ago where there was the small agricultural exhihit spoken of and did not say that the State Fair had such an exhibit. He spoke regarding the impression his first visit to the State Fair gave him and said he was disappointed. He said he contrasted it naturally with the State Fair held in his own state, Wisconsin, and at the time the California State Fair fell far short of what he considered should he the purpose of a State Fair. He denounced what he disapproved of, and left the impression that a State Fair rightly conducted was a good thing for the State as well as all concerned.

Respectfully yours,
ERNEST A GAMMON.

We are pleased to print the ahove letter. The Sacramento *Union* quoted Mr. Dore as saying that the California State Fair of 1883 opened with "three sheep, two coops of chickens and one hoh tailed horse," and as we knew the State Fair of that year was one of the hest ever held in the State we naturally resented the attack upon it and quoted a few figures to show that the statement was not correct. We are pleased to know that Mr. Dore was misquoted hy the *Union* and that he did not make the remarks attrihuted to him by that paper.

Answers to Correspondents.

D. W. NEEDHAM, San Jose—Waldstein's register numher is 12597. His record is 2:22½ for a mile and 13:05½ for five miles, which is the hest record held hy a trotting stallion. He was sired hy Director 2:17 and his dam was Nelly W, hy Electioneer 125 and second dam Sister hy John Nelson 187. He is at present owned hy Matt Zahner, whose present address is Rohnerville, Humholdt County, Cal., and who will probahly winter at Pleasanton this year.

F. HANEY, Modesto—Prince Nutwood 2:12¾ has never been registered as far as we know. We can find no horse registered as Prince Lot. Prince Nutwood is eligihle to registration under Rule 1, as his sire and dam are hoth registered.

Hal B. 2:04 1-2 in Los Angeles.

Mr. D. H. Mast of West Melton, Ohio, has sent his fast pacing stallion Hal B. 2:04½ to Los Angeles, and the horse will make a stud season there until ahout April 15, 1905. Hal B. won all his races, nine in numher, on the Grand Circuit in 1899, and placed about $15,000 to his eredit. As he was not eligihle to any class slower than 2:09 that year he had to meet a lot of high class horses, but defeated them all and closed the season with his present low mark. Hal B. is a superh individual 15 3½ hands high, sound and perfect in manners and is a high class road horse. He invariahly trots on the road until called upon for speed when he shifts naturally to the lateral gait. He is hy the great sire and race horse Hal Dillard 2:04¾ (sire of four 2:10 performers) and his dam is Ellen M. hy Blue Boy, grandam by Blue Bull.

P. H. McEvoy of Menlo Park is offering two handsome Prince Airlie stallions for sale—Milhrae (trotting record 2:16½) and Menlo Boy 3741. For particulars see advertisement. *tf

Pony Racing at San Mateo.

The heautiful country seat of C. W. Clark, Esq., has heen placed at the disposal of the California Polo and Pony Racing Association for its San Mateo meetings, and on Thanksgiving Day and Saturday of last week large crowds attended to see the contests on the well-appointed track. There were six events each day, and the ponies owned hy Mr. Rudolph Spreckels carried off the honors in grand style, winning three firsts, four seconds and three thirds on Thursday, and four firsts and five seconds on Saturday, including the magnificent silver cup. Frank Skinner, the well-known turf writer of the San Francisco *Examiner*, clinched his title of champion amateur rider of the Coast hy riding three winners on the first day and three on the second. Rohert Leighton, who is the secretary of the association as well as its handicapper and clerk of the scales, did his work well, and no hetter managed meeting has heen seen in California. Major Rathhone and J. Downey Harvey were stewards, Charles T. Boots presiding judge, W. D. Donnelly clerk of the course, R. J. Havey starter, W. D. Randall timekeeper.

As will he seen hy an advertisement in this issue, the association's second meeting will take place at the same track on Saturday, December 31st, and Monday, January 2d. For this meeting the Champion Stakes for Ponies has heen opened to close for entries on Saturday, Decemher 24th This is a sweepstake of $50 each, with $100 added hy the association, of which $75 to second and $40 to the third. The stake is for ponies 14 2 and under, and the conditions are fully stated in the advertisement. The race is to he run Saturday, Decemher 31st, and is open to all who comply with the conditions. In addition to this event there will he eleven other races. Programs may he had on application to Secretary Leighton, 421 Market street.

Thanksgiving Matinee at Los Angeles.

In spite of the fact that the opening of the races at Ascot Park offered a hig attraction to Los Angelenos on Thanksgiving Day, eight thousand lovers of the light harness horses were at Agricultural Park to see the sport offered hy the Driving Club's members and their horses. The track was in magnificent condition, and the whole program went off in a most satisfactory manner. Sweet Marie, William Garland's great trotter, went an exhihition mile, but after her hard campaign on the grand circuit, her owner refused to put her to a hard test, and after he had heen presented with a heautiful silver loving cup in appreciation of the fame hrought to California hy the performances of Sweet Marie during the season, the mare was jogged an exhihition mile in slow time. The day's events were all of an interesting character and a full result of the summaries is as follows:

Pacing, 2:20 class—Mr. Pounder's Glen 1-1, Dr. Dodge's Lohengrin 2-4, Mr. Berry's Willie Gih 6-2, Mr. Kramer's L. W. 4-3, Mr. Fairchild's Venus N. 3-5, Mr. Morrel's Wandering Boy 5-6. Time—2:19, 2:19½.

Trotting, free-for-all—Mr. Berry's Briney K. 1-1, Mr. Henderson's Rozell 2-2, Mr. Erkenhrecher's Rita H. 3-3. Time—2:13½, 2:14.

Pacing, free-for-all—Mr. Bartel's Midnight 1-2-1, Mr. Delory's Welcome Mack 2-1-2, Dr. Bryson's Toughnut 3-3, Mr. Henderson's Henry N. 4-4, Mr. Pounder's Silvery Tip 5. Time—2:15, 2:14, 2:14.

Trotting, mile dash—Mr. Giffert's George Anderson won; Mr. Nickerson's George, Mr. Fritz's Gen. Boodle, Mr. Shaw's Frank McKinney, Mr. Merrett's Belle Mason and Mr. Bell's Rex finished in the order named.

Trotting, mile dash—Mr. Wilson's Willets won, Mr. Michel's Big Don second, Mr. Pierce's Laura G. third. Time, 2:19½.

Team race, mile dash—Mr. Hynes' Black Bess and Black Jim won, Mr. Duncan's Jessie Del and Ketchum second, Mr. Hunter's Actor and Nimrod third. Time, 3:07.

Trotting, two in three, unfinished—Dr. Hagan's Don M. 3-1, Mr. Snodgrass' Jasper Paulsen 1-3, Mr. Colyear's Maggie McKinney 2-2, Mr. Adcock's Neerhird 4-4, Mr. Michel's Alhuquerque 5-5. Time—2:22, 2:22½.

Judges—Byron Erkenhrecher, Dr. M. L. Moore, Dr. De Barth Shorh. Timers—C. A. Canfield, J. A. Fairchild, Walter L. Vail. Starter—A. W. Bruner.

A Sure Thing

Is offered our readers in the advertisement of the Wells Medicine Co., Lafayette, Ind. It is a guaranteed cure for the dread diseases of horses. the distempers in all their form, from an ordinary cough to the worst form of la grippe and shipping fever. Craft's Cure is liquid and easily administered. It is harmless to the patient but a deadly foe to disease germs. It is a tonic that will ward off the diseases when used regularly in small quantities with the feed. It is a sure thing for the reason that druggists are instructed by the manufacturer to refund the price in any case where it fails to cure. A guaranteed cure is certainly a sure cure.

OLD GLORY SALE.

The demand for harness horses is increasing, or the Fasig-Tipton Company would not be able to sell over a thousand horses in nine days at an average price greater than obtained at the Old Glory sale of 1903. There were no sensational prices recorded at this sale —$15,500 being the top figure, and several high-class stallions brought disappointing prices, yet the demand was so great that the average was $500 per head, which is a great showing and proof that the Fasig-Tipton Company know how to get bids from the buyers.

The first horse led into the ring was Arion 2:07¾, whose record of 2:10¾ as a two-year-old has never been approached. He was consigned by the Estate of J. Malcolm Forbes, the gentleman who paid Senator Stanford $125,000 for him as a colt. Arion will be 16 years old in the spring, and has but nineteen standard performers to his credit, only three of which are in the 2:15 list, and one, Nico 2:08¼, in the 2:10 list; but it is said that his opportunities in the stud have been very limited, even though owned by one of the wealthiest breeders in America. He did not make a good appearance in the salesring and but few bids were made on him. M. W. Savage's bid of $2500 was the highest, and the probability is that Arion will achieve more fame as a sire in his new home on the International Stock Farm than he has heretofore.

A few minutes after Arion was sold the ten-year-old stallion Jupe 2:07½ was led into the ring. He holds the two-year-old race record of 2:13¾ for trotters, and, while he has not yet sired a standard performer, is considered one of the handsomest stallions in America and brought $5000, a newcomer to the breeding ranks, Mr. F. W. Lears of Blooming Grove, New York, purchasing him to place in the stud.

Then after horses of lesser note were sold Belsire 2:18, son of Electioneer and Beautiful Bells, was brought out. He is 13 years old, and has only eight in the list, the fastest of which is Furl 2:15½. Dr. Fitzgerald of London, Ontario, got him for $800. The first day's sales were disappointing and the average was low, but the bidding was much livelier thereafter and the prices better.

Idolita 2:09¼, son of Mendocino and Edith by Geo. Wilkes, was one of the stars of the sale. He has been a good money winner, is a fine individual and while but eight years old has a two-year-old with a record of 2:27¾ and several others with fast trials. The high bid on him was $4850 and was made for Prince Smith of Berlin, Germany, and the horse has already been shipped to his new home.

On Wednesday Sidney Dillon, the star of the sale, was offered. There were but three or four bids on him, starting at eight thousand dollars. Nathan Straus of New York bid $8500 and then Mr. Sterling Holt of Indianapolis bid $9000 which was the best offer auctioneer Bain could get. It was a sacrifice, as is so often the case when a horse is sold by the managers of an estate. It is told here in San Francisco that when Lou Dillon trotted in 1:58½ last year, Mr. T. J. Crowley of this city went to the managers of the Estate of Henry Pierce and asked for a price on Sidney Dillon, which was refused him. Mr. Crowley told the writer this week that he was acting at the time for Geo. H. Ketchum, of Toledo, Ohio, owner of Cresceus 2:02½, and that he was prepared to pay as high as $25,000 for the sire of the world's champion trotter.

One of the great bargains of the sale was the stallion Directly 2:03¼, son of Direct 2:05½ and Mabel by Naubuc He sold for $1600 and will earn more than that every year in the stud for some time, as his colts are a fine lot and fast

Thursday was the big day of the sale, and the average for the day was $1431.75 per head, for the ninety horses sold. During the first four days $269,940 were taken in by the cashier, an average of $683.50 per head. The star of the day and the top notcher of the entire sale was Sadie Mac 2:11½ by Peter the Great 2:07½ out of Fanella by Arion 2:07¾. She brought $15,500. Miss K. Wilks, of Galt, Ontario, was the buyer. Grace Bond 2:09½, the greatest three-year-old trotter, went to Mr. A. C. Maynard's bid of $13,000, and Nora McKinney 2:12¼, the mare by McKinney out of Sally Dexter by Dexter Prince that Dave Young of Stockton bred and raised, sold for $11,000. She was purchased by William Simpson, owner of her sire. Monte Carlo 2:07¼ brought $4,500, Admiral Dewey 2:14¼ $6000, and Alexander 2:09¼ that was in Geers' string this season $5000. The famous California pacer Clipper 2:06 by Diablo sold for $1260, and Rubato, own sister to Agitato 2:09 brought $500. Paul D. Kelley 2:2[illegible], the champion yearling pacer, only fetched $700, and Prince Alert 1:59¼ went for the small price of $[illegible] to an Englishman who will drive him in exhibitions in England next year. The string of Mr. E. E. Smathers, consisting of sixteen head, brought a total of $50,195, an average of $3,137. The hulk of this was received for Major Delmar who was sold to Mr. Billings for $15,000 and Sadie Mac that brought $15,500 as related above. The famous Billy Buch 2:07¼ only brought $1075. John M. 2:02¾, the best pacer of the year, looked to be sacrificed at $4,400, but the earning capacity of pacers is limited and there are few large purses for sidewheelers in the free-for-all class.

The principal sales during the first four days of the sale are here given, a lack of space compelling us to leave a report of the remaining days until the next issue.

Arion, h h by Electioneer–Manette by Nutwood; M. W. Savage, Minneapolis, Minn.; $2500.

A good McKinney stallion is wanted to lease. See advertisement.

Mr. Smathers has sold the gray trotter, Dr. Strong to S. A. Bickering of Pittsburg for $10,000.

Mr. J C Adams of Phoenix, Arizona, sold Lady Rivers, the dam of Sweet Marie 2:04¾ last Thursday to Mr. William Simpson, owner of McKinney.

The Dexter Princes seem to sell well at every eastern sale. The four-year-old filly Manzita by this sire brought $1225 although sho has no record.

Lou Dillon will be at home to admiriog friends at San Jose track this winter. Her presence there will be worth a great deal to that excellent training track.

M. W. Savage, proprietor of the International Stock Food Farm owns a great quartette of stallions. Dan Patch 1:56 and Roy Wilkes 2:06¾, pacers, and Directum 2:05¼ and Arion 2:07¾, trotters.

Several carloads of horses are expected at Pleasanton in a day or two from the East. The strings of James Butler's East View Farm, and Col. J. C. Kirkpatrick's horses are among them.

A report was in circulation in the East last week to the effect that Ed Geers had signed a three-years' contract with James Butler to drive the East View Farm horses, but Mr. Geers states that there is no truth in it.

A request was made by Mr. Savage recently to allow Dan Patch to be exhibited at St. Louis on Sunday, and he answered thus: "Sorry, but I can't do anything for you. Dan Patch joined the Methodist church two years ago."

While in New York, before being shipped to California, Electioneer stood in a boxstall in Frank Ferguson's San Francisco stable in 52d street, near 6th avenue. After Arion 2:07¾ was sold on Monday of last week, he was put in the same stall where his sire stood some twenty-five years ago.

Among the mares already booked to McKinney 2:11¼ are Folly, dam of Tiverton 2:04½; Lady Rivers dam of Sweet Marie 2:04¾; Lady Ham, dam of Hawthorne 2:06¼; Grace Boyd, dam of Grace Bond 2:09¼; Hawthorne 2:06¼; Bay Star 2:08; Bouncer 2:09 and the greatest of them all Nancy Haoks 2:04.

J. B Stetson has arrived in Denver, Colo, from Memphis, where he finished the season's racing with the Richardson string of horses, consisting in part of Swift B. 2:16¼, Oregon Maid 2:08¼ and Getaway 2:24¼. Mr. Stetson has nine head in his string, which he will winter at Denver, and likely race out here next season

There are two or three men in California who are wishing they had put in bids for Sidney Dilloo, but they all thought he would bring $20,000 at least and they could not afford to go that high. The sire of Lou Dillon could have been sold for more money at private sale in California than he brought in New York.

Nance O'Neil 2:09¼ is not to be trained by Farmer Bunch as stated in these columns last week She will remain in Mr. Willard Zibbell's charge and will doubtless improve on the record he drove her to at Sacramento last August. Mr. Bunch has several of Mr. Croner's horses at Pleasanton, but Nance O'Neil is to be under the personal charge of Mr. Zibbell.

Here is what Ed Geers says about Lou Dillon. "I believe Lou Dillon can trot a mile in two minutes without a wind shield. I have felt that the mare was not in good shape during the past season on the Grand Circuit, and when she was attacked with the thumps on the day of the Gold Cup race, that my opinion that she was overworked during the summer was justified. Her long rest during last winter, when for two months or more she stood idle in the stall, did not do any good, and the hard campaign of the season told on her.

So long as two-year-olds can be sold for $10,000 and $15,000 refused for three-year-olds the small breeders should feel encouraged to keep in the business. In the breeding business it is not always the man owning the largest farm, the greatest number of broodmares, and an expensive stallion that secures the biggest prizes. Charles Marvin bred, raced and sold Bon Voyage and Al Thomas bred and raced Alta Axworthy and refused to sell her Both men conduct their breeding operations on a very small scale, but in the line of success they stand close to the top.

C. C. Crippen purchased last week from Henry Struve of Watsonville the seven-year-old bay gelding Honduras by Prince Nutwood 2:12¼, dam by Strathway 2:19. With five weeks work last summer he trotted a mile in 2:25 and a half in 1:09. He was then taken home by his owner and driven on the road till November 3d when he was returned to trainer Williams at San Jose, for more track work. On Saturday, November 19th, he worked an easy mile in 2:24, last half in 1:08¼. He can step in 2:20 any day [illegible] has had scarcely two months training altogether. [illegible] Williams who first trained and drove John Caluo 2:11¼ believes Honduras will make a faster trottor [illegible] Col Kirkpatrick's good money winner.

The three-year-old divisioos of Breeders Futurity No. 2 will be trotted and paced next year at the meeting of the Pacific Coast Trotting Horse Breeders Association. This stake was guaranteed to be worth $6000, but it will exceed that amount and those who have entries in it should see that the last payment (except the starting payment) is made by January 2d, after which date entries not paid up on will be forfeited. The stake which is for foals of 1902. to trot or pace as three-year-olds in 1905, closed with 299 original entries and is worth considerable more than the guaranteed amount. Make this payment January 2d and don't forget it.

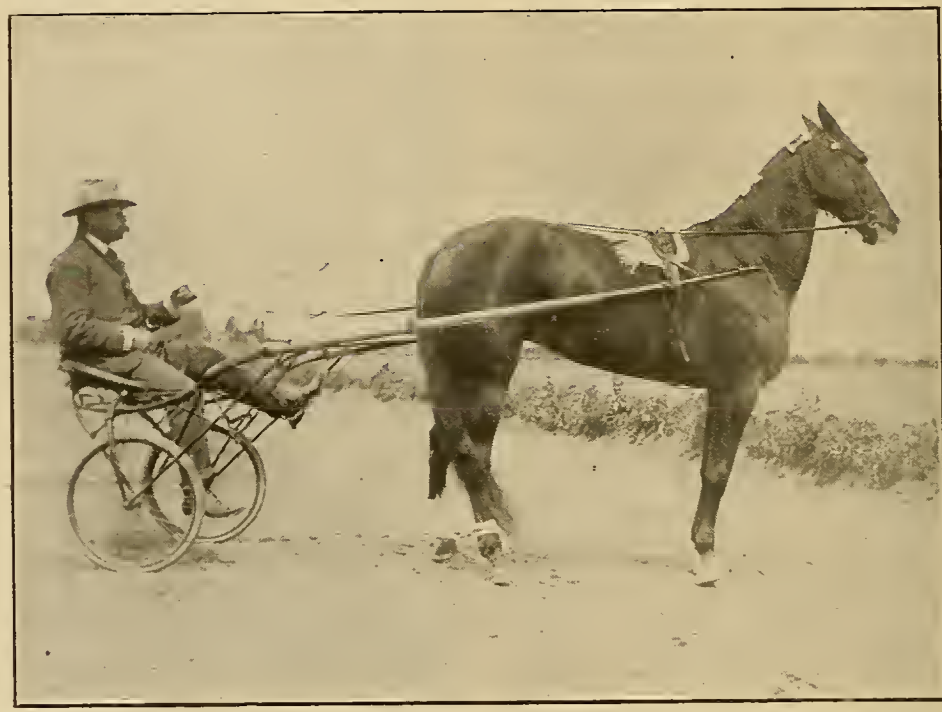
Rita H. 2:11¼ pacing and 2:14¼ trotting, is offered for sale by her owner, Mr. Byron Erkenbrecher of Los Angeles. This McKinney mare is worth every cent her owner asks for her. She has been a paying investment for him, but his business occupies all his time and he has never had the pleasure of seeing her in an actual race, although she has won nearly every one she has started io, and has five or six thousand dollars to her credit. Mr. Erkenbrecher has driven her in several matinee races at home, and has won all but one of them. She is absolutely sound and one of the best of drivers. If you want a good one write Mr. Erkenbrecher about her.

In sixteen years the enormous amount of $166,940 has been given away in a single stake race. The M. & M. stake of Detroit was first opened in 1889, and since that time the above amount has been distributed. First money amounted to $83,870 or an average of $5242 to each of the sixteen winners. Hendryx was the first horse to win the rich prize. He trotted in 2:18¾; Walter E. was next in 2:18¼; then came in succession Temple Bar 2:17¼, Nightingale 2:17½, Siva 2:13¾, J. M. D. 2:15¼, The Corporal 2:13½, Emma Offut 2:12½, Rilma 2:11½. Directum Kelly 2:11¼, 2:10½, Lady Geraldine 2:14¾, Eleata 2:08¾, Rythmic 2:11¼, John Taylor 2:10¼, Stanley Dillon 2:11½.

W. J. Kenney, the dealer in bike sulkies and speeding carts, at 531 Valencia street, has just received twelve McMurray speeding carts. Among them is one painted royal blue and striped with gold, which is the handsomest thing of the kind that has been sent to this Coast. Mr. Kenney has done a large business this year in the popular McMurray sulkies and carts.

The many friends of Frank E. Wright, the well known horseman of Sacramento, will regret to learn that he met with a very severe accident on Wednesday of last week that came near costing him his life. It appears that he went to his stables at Agricultural Park to visit his racing stock, and when he entered the stall occupied by one of his horses, the animal kicked him full in the face, cutting a severe gash in his forehead and across his nose. The force of the kick rendered Mr. Wright unconscious, and his physician worked over him for nearly two hours before he recovered. Happily for Mr. Wright, the animal that inflicted the injury was unshod, or, as his physician states, he would never have known what struck him, as he never would have recovered consciousness.

At the Old Glory sale James Thompson was a bidder, acting for Col. Kirkpatrick of this city. Among those that fell to his bid was a big three year-old filly called Lottie Pointer that is one of the best bred ones in America. She is by the first two minute pacer Star Pointer 1:59¼, and her dam is Lottie Loraine 2:05¾ a world's record for pacing mares when made. Lottie Loraine is by Gambetta Wilkes, that has sired 148 in the list, the next dam is Lady Yeiser, dam of 11 in the list, by Garrard Chief, next dam by Vermont 104, next dam by Black Jack and next dam by Vermont Black Hawk 5. This filly has not been trained but has shown an eighth in 16 seconds and was sold on account of the death of her owner. She wears only quarter boots and paces as naturally as one would expect from a filly that is by a champion pacing stallion and out of a champion pacing mare.



Lou Dillon 1:58 1-2

Will Spend the Winter at San Jose in charge of Budd Doble

Tom Bonner, manager of the Santa Rosa Stock and Sales Yard, 1499 Market street, corner 11th, advertises for sale a three-year-old black filly by McKinney 2:11¼ out of the dam of Trilby Direct 2:08¼, that should be snapped up by someone for a broodmare, although the chances are she will make a trotter, as she is a nice gaited one and never trained. The dam of this filly, Bessie Wilkes by Sable Wilkes, died soon after the filly was foaled, and consequently the latter was poorly nourished and did not grow very large. She was bred to Nutwood Wilkes, and is now heavy in foal and is growing in height. Her foal should be worth considerable, as the Nutwood Wilkes-McKinney cross has produced speed invariably, and as the mare is nominated io the Breeders $7000 futurity sho should find a ready buyer.

The Woodland track is having many improvements made on it by Mr. Alex Brown, its new owner. Chas. Spencer, his trainer and superintendent, is in charge. New fences have been built, roads leading into the grounds and to the grandstand neatly graded, the buildings are all being placed in good repair, and there is an evidence of thrift about the place. All the trotting bred stock owned by Mr. Brown has been transferred from Walnut Grove to the Woodland grounds, including Nushagak, Prince Ansel and all the broodmares. Mr. Spencer has about twenty youngsters by these sires that he is breaking and training and a better looking lot cannot be found on any stock farm in this country. Mr. Spencer has had the track much improved, a drain ditch made clear around on the inside and says that horses can be worked on the track within a day or two after the heaviest rain. Many other improvements will be made in the near future and the horsemen all over the State are already talking about the big Woodland meeting next year.

Mr. F. S. Gorton of Chicago was at the New York Horse Show last month and remarked to a representative of the *American Horse Breeder:* "It keeps me busy answering questions about what I am going to do with Irish, 4, 2:08¼ by Monterey next year. I haven't decided yet." Irish is the fastest four-year-old pacer of 1904, and has shown such sensational speed that his owner believes that when he finally reaches his limit he will be very close to a world's champion. He was bred to a few mares last spring and will be allowed to serve a few next spring before going into training. Irish, by the way, has shown an inclination to trot. Indeed, last year as a three-year-old, he showed quarters at the diagonal gait at a very merry clip.

One of the promising young trotters in California is the stallion Millbrae, owned by Supervisor P. H. McEvoy of San Mateo county. This horse was bred by the late William Corbitt and is by Prince Airlie 28045, (son of Guy Wilkes and Chantilly by Nutwood) dam Fearless by Fallis 4781, second dam by Signal 3327, third dam by John Nelson 187, fourth dam Miss Eaton by Williamson's Belmont. Millbrae was purchased with his dam by Mr. McEvoy at the closing out sale of the San Mateo Stock Farm in 1898, and is now six years old. He was started a few times this year after very limited training and took a record of 2:16¼ in a race at the State Fair. Since the races Millbrae has been worked out but twice, and in the first trial he trotted a mile in 2:14½ and in the second a mile in 2:13 flat, with the last half in 1:05 and the last quarter in 31¼ seconds. If he gets to the races all right next year he will in all probability trot in 2:10 and better. Mr. McEvoy has great faith in Millbrae as a sire, and will breed a few high class mares to him in the spring, and offers free service to not over a half dozen mares of speed and pedigree provided the owners will contract to develop the produce for speed.

The New Track at Concord.

CONCORD, Nov. 25, 1904.

BREEDER AND SPORTSMAN:—Last summer, when in Contra Costa county buying hay, I was going from Concord to Clayton when I saw smoke rising along the edge of the new racetrack. Thinking they must have something very fast, I drove in and found Capt. J. E. Durham and W. S. Clark burning the stubble and weeds off the track. Having secured control of it for a year they were preparing it to work their horses on.

I gave them every encouragement I could, telling them that I thought it a good move to have it controlled by men identified with the horse business and not by a few politicians who only hold meetings when they want their names before the public on the posters. I could see they had quite a job on their hands, as there were many high places to be cut down and hollows to be filled up. It was just as the graders left it with their scrapers, and with water only at one point near the three-quarter pole.

Hearing that there was to be some matinee racing at the track Thanksgiving afternoon, it was with no little interest that I wended my way to the place and was very much surprised. While they had only repaired about a dozen stalls to make them habitable, the track was in splendid condition. Although without water since the last rain, it did not cup and was not too hard.

The track is of reddish clay with just a little fine gravel, the turns well thrown up, and the stretch sixty feet wide. There is good footing and the track dries off quickly, as they say they were speeding on portions of it the third day after three inches of rain fell in October. With a little more leveling and two more tanks to get water from, it can be made the fastest and safest track in the State.

The races were to start at two o'clock, just the time people were eating their turkey dinner, but it seemed as if they hurried through or put it off until six o'clock, for they came afoot and in buggies, carts and carriages until a very respectable crowd appeared, all bent on having a good time.

The first race was called at two P. M. sharp and there came out Sid Abbot, a pacer by Sidmore, the very picture of his sire, so much so that it brought to mind several races in which Sidmore figured, with the late Lee Shaner up. The next was a bay stallion, Keno Wilkes, a trotter by Comet Wilkes. The third was Rae C., a trotter by Rey Direct, a little beauty. Although finishing last she had many admirers and came the homestretch like a race horse. This was called a pony race all the horses being under 15 hands. Summaries:

Sid Abbot by Sidmore.....(Perry)	1	1	1
Keno Wilkes by Comet Wilkes.....(Holiday)	2	2	2
Rae C. by Rey Direct.....(Clark)	3	3	3

Time—3:06, 3:05, 2:44½.

Jack F.....(Fosket)	1	1
Blue Sidmoor.....(Silvia)	2	2

Time—2:58, 2:55.

There were no prizes given only the usual treating of winner and loser in which the turkey dinner figured. Some of the finishes were close and brought cheers from the crowd. This was the first matinee meeting at the new track and many were sporty inclined for between heats they did not wait to hitch in light rigs but went out in their buggies for a brush.

It was announced from the judges stand that their next meeting would be on Christmas day and I will attend if I am anywhere this side of Sacramento.

As to the horses working here there are only a few and they have only been working since the rain came to pack the track. There are some very likely looking colts being broken and gaited. There are two pacers that can work miles in 2:25, one a mare by Orator a grandson of Electioneer, the other a gelding by Comet Wilkes who can show a flight of speed seldom seen with so little work, two more by Comet Wilkes, one by Diablo and one by Sidmore.

TRAVELER.

John M. "Riffles" Sometimes.

John M. 2:02¾, the Illinois bred pacer by Paris 2:19½, is the real "racing machine" done up in "horse hide". Al Thomas, in speaking of him recently, said: "I have raced alongside him several times, as you know. When you think he is cornered and that you have a chance to beat him he executes a sort of what might be called a riffle'—my eye is not quick enough to catch it so as to describe it. It is not a run, just a 'riffle,' and he makes a noise with his feet like sticks on a snare drum, then he is off like a shot. The gait is not illegal—if it is how are you to catch him at it? But, whatever it is, it makes him not only a lightning fast pacer, but one hard to beat, no matter how fast your pacer can step."

Jackson's Napa Soda does not tangle the feet.

Los Angeles Correspondence.

The opening day at Ascot Park was ushered in by perfect weather which has prevailed throughout the whole week. Los Angeles is certainly the ideal spot for winter racing and the conditions which prevail here will go a long way to build up the sport in this part of the country until Ascot Park is recognized as the most noted track in the world for winter racing. No pains or expense has been spared in beautifying the grounds, improving the track itself and providing quarters for both horses and their attendants.

The crowd on the opening day was a record breaker between nine and ten thousand people passing through the turnstiles; the attendance on the succeeding days, of course, has been smaller but there has always been plenty of people at the track, the average being far above that of last year. Eleven books cut in on the first day and the betting has been so brisk that on the second cut in three additional bookmakers hung up their slates. These fourteen books as well as the two field books and the combination box have had all the business they could attend to. When it is remembered that the average number of books last year was but nine it is easily seen how much improvement has been made this year. There are plenty of horses here now and more are constantly arriving, one or two carloads dropping in daily. The class of horses here is the best raced in California since the last season at Tanforan and is in fact the best ever raced in the State. Judges Hamilton and Cole, who officiated last year in the judge's stand, occupy the same positions to the satisfaction of everybody.

The opening handicap, value $1290 (the only stake which has been run so far) was won by Ethylene who, lightly weighted, made the running throughout and won rather handily from High Chancellor, the top weight of the lot. Flo Bob was third a length away; the mile was run in 1:40¾ over a track which was good though not fast.

W. J. Speirs who trains Lucky Baldwin's horses summered in Los Angeles and rested up his string, and is now reaping his reward winning with great regularity; Escalante, El Chihuahua, El Varacco and Katherine Ennis all having won races since the opening of the meeting besides others from this stable running into the money. Green B. Morris is having very good luck; although High Chancellor could do no better than second in the stake he has since won a handicap, and Gold Rose from the Morris stable has won both of her starts; this is a very shifty filly by Gold Crest-Rose Ban and on her first essay ran the Slauson Course (200 feet short of six furlongs) in 1:09, a track record, and finishing under wraps. On Tuesday she ran six furlongs in 1:13, again winning easily. In these races she defeated such good colts as Tyrolian, Mad Mullah, Tramotor and Cutter.

Elfin King and Merwan are the only horses to win more than one race, each of them having been successful on two occasions. Merwan does not seem to be such a dog as he was formerly and may have developed into a fair horse. Devon B., who won a maiden two-year-old race, is by Ben Roe and is the first of the get of that sire to win. Mr. J. A. Cole of San Bernardino is the owner of Ben Roe and thinks that he will make a great sire.

Of the jockeys riding here the leading ones are Hildebrand, Lawrence and H. Smith, the latter having ridden four winners and the two former six each.

Mr. J. W. Brooks informed me last week that it was his intention to raise the amount of the purses and would shortly announce that in future there would be no purse offered less than $400.

GEO. B. KELLEY.

Something Doing in Arizona.

PHŒNIX, ARIZ, Nov. 28, 1904.

The Phœnix Driving Club has taken a new lease of life, and everything looks favorable for good sport on the track here during the winter. The club has just elected new officers as follows: President J. C. Adams, Vice-President Walter Brunt, and the following additional directors: I. T. Stoddard, V. L. Clark, Wolf Sachs, W. Tiffany, A. H. Davidson, Dr. H. Ramsey, J. K. Wheat.

Five races were held by the Phoenix Driving Club on Thanksgiving Day with the following results:

One mile trot—Miss Colbert [J. K. Wheat] first; Sirius Onward [W N. Tiffany] second. Time—2:44 2-5, 2:38 2 5.

One mile mixed—Bystander [J. K. Wheat] first; Delnette T. [A. H. Davidson] second; Pointer Star [W. F. Holder] third; Bill C. [J. W. Canning] fourth. Time—2:29, 2:28 1-5.

One mile trot—Sheeney Mark [D. Oshorne] first; Arizona Sirius [W. N. Tiffany] second; Billy Mack [D. McDermott] third; V. L. [W. R. Alhright] fourth. Time—2:59, 2:56.

Half mile running for lady riders—Monday [Miss Yetter] first; Jerry [Miss Millie Elder] second; Lilly [Miss Elder[third. Time—1:01.

One mile pace—First heat: Nellie Briggs [A. F. Moosau] first; Custer [J. C. Adams] second; One Tongue [M. McAlister] third; Tommy Lawson [W. T. Barkley] third. Time—2:25½. Second heat: Tommy Lawson, first; Nellie Briggs. second; Custer, third; One Tongue, fourth. Time—2:39½.

The officers were: Vernon Clark, starter; Isaac T. Stodard, Dr. Howard Ramsey and James Gibson, judges; W. W. Cook and Woolf Sachs, timers; J. J. Blinkhorn, superintendent of track, and Charles McCoy, marshal.

Our first matinee was a splendid success. On December 29th, 30th and 31st will hold a meeting and decide several stake and other races.

W. C. Green's string of harness horses is now on the way here from New York and will winter at the track.

We are to form a stock company to buy the necessary land and try to hold a Territorial Fair here by next winter.

A. H. DAVIDSON.

Fresno Driving Club's Matinee.

A large crowd was at the Fresno track Thanksgiving Day when races under auspices of the Fresno Driving Club were held. The track was in good condition and the time excellent. In the first event E. P. Stockdale's bay mare Selda by Stormy John surprised all the knowing ones by winning the event over the old favorite George. She paced the third heat in 2:17 the club record. There will be racing again on Christmas Day, weather permitting. Summaries:

First Event, 3 in 5.

Selda by Stormy John.....(Mr. Stockdale)	3	3	1	1	1
George by Loeber.....(Mr. Bachant)	1	1	2	2	3
Newport by Raymon.....(Mr. Buchanan)	2	2	3	3	2

Time—2:20, 2:21¼, 2:17, 2:21¾, 2:21¾.

Second event, 3 in 5.

Elmont by Lynmont.....(Mr. Reed)	1	1	1
Bolliveo by El Capitan.....(Mr. Lowry)	2	2	2
Graceful George by Alcona Jr.....(Mr. Bonst)	dis		

Time—2:22½, 2:18 2:21¼.

Third event, 2 in 3.

Baby Mac by Stratbway.....(Mr. McDonald)	1	1
Milton Gear by Harry Gear.....(Mr. Lowry)	2	3
Bisbop by Iris.....(Mr Buchanan)	3	2
Rosa Lee by Stratbway.....(Mr. Kelley)	dis	
Dick.....(Mr. Shaver)	dis	

Time—2:30, 2:29.

SPECTATOR.

Vanderbilt Buys a Pair of Trotters.

According to the New York *Morning Telegraph*, one of the most important sales of the late fall in Eastern trotting circles has just been consummated, Reginald C. Vanderbilt buying the great show team, Rene Belle and Fleet Autograph, from H. T. Drake, of Brocton, Mass. The team of mares is said to be the best matched in the United States. It will be remembered that Rene Belle was formerly owned by Charles H. McCurdy, of Marion, O., and was sent East last winter. She is a daughter of Hustler Russell 2:12¾, dam of Montague, a son of Bourbon Wilkes. The *Telegraph* states that the mares can trot fractions of a mile together at a sensational speed, and on dress parade, when out for the ribbons at the summer horse shows this season, made a clean sweep. New York has had no pair like them, not even in the days when the late Colonel Kip was in the heyday of his glory, showing winners at the national horse shows. Mr. Vanderbilt showed against the mares at the Brocton horse show two weeks ago, and there saw the necessity of adding them to stable his show. Mr. Vanderbilt paid $7500 for the team.

Racing at Davisville.

The horsemen who live in and around the little town of Davisville in Yolo county enjoyed a few races on Thanksgiving day. The first event was a pacing race, best two heats in three, the entries being Irish Lassie, owner F. P. Smith, driver Elmo Montgomery; Mickie Free, owner Bert Miller, driver Carey Montgomery; Sleepy Joe, Gen Marden owner, John Johnson driver. The track is a sixteenth less than half a mile, hence twice around is seven-eighths. The first heat went to Mickie Free; time 2:07; the second and third to Sleepy Joe; time, second 2:08. third 2:13¼.

The second event was for three yearlings. Wing Hi, owned by Will Grives and Mercer Bracken, driven by Bracken; Little Sister, owned and driven by S. W. Lillard; Cola, owned and driven by Frank Camphell. Wing Hi took the first two heats, half-mile dashes; time, 2:07.

The third event, saddle horse 200-yard dash race; contestants, J. C. Montgomery and W. D. Chiles, ridden by Pulse brothers. Chiles winning by a neck.

Finds It is All It is Claimed to Be.

MENOMINEE, MICH., April 3, 1901.

W. F. Young, Springfield, Mass.

Dear Sir:—I have used a bottle of Absorbine and [illegible] be all you claim for it. Yours truly, FRED [illegible]

Absorbine $2 per bottle, express prepaid.
Address W. F. YOUNG, P. D. F. [illegible]

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Coming Events.

Rod.

April 1-Sept. 10. Oct 16-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed

Sept. 1-May 1—Open season for shrimp.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Sept. 10-Oct. 16—Close season for catching salmon.

Oct. 16-Nov. 15—Close season for taking salmon above tidewater.

Nov. 15-Sept. 10—Season open for taking salmon above tide water

Gun.

July 1-Feb. 15—Dove season open.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Nov. 1-July 15—Deer season closed.

Bench Shows.

Nov. 22, 25—Philadelphia Dog Show Association. Philadelphia, Pa. J. Sergeant Price, Secretary.

Dec. 6, 7—Bay State Co-operative Bench Show Association. Brocton, Mass Tom B. Middlebrooke, Clerk.

Jan. 10—Georgia Field Trial Association. Albany, Ga. P. M. Essig, Secretary, Atlanta, Ga.

Jan. 16—United States Field Trials Club. Grand Junction, Tenn. W. B Stafford, Secretary-Treasurer, Trenton, Tenn.

The Sport of Target Shooting.

Target shooting as a sport has been more or less sharply divided into match rifle shooting and military rifle shooting. The points in which the match rifle differs from the military are its lighter trigger pull, finer sights, and better finish, and, in addition, various departures from military style are allowed in the way of special attachments, butt-plates, heavier weight of barrel, etc. The match rifle is developed with accuracy as its chief aim, and accuracy at the particular distance it is to be used, while the military rifle has to be adapted to all ranges, and be strongly built and serviceable under adverse conditions, even if at the expense of some accuracy.

In view of these conditions, it is scarcely to be wondered at that the target rifle developed with the sole object of shooting from the off hand position at 200 yards, as in vogue by the German-American (Schuetzen) clubs, should differ so much from the long-range match and military rifle. The Schuetzen rifle has changed, but little in many years, and in its present form it is probably as near perfection for its purpose as it is possible to get. Most of the modern Schuetzen rifles are still shot with black powder, and in the finest American makes the bullet is pushed down from the muzzle as in the old muzzle-loading rifles. They are extremely accurate, and the shooting is generally on long sheltered ranges; so that this kind of shooting brings the game down to merely one of skillful holding.

On the other hand the long-range match rifle has of late years approached more and more closely to the military, so much so that most of the match rifles now in use in England for instance, are merely military rifles fitted with fine target sights. Skill in shooting at the long range, whether with military or match rifles, involves not only good holding, but also a knowledge of the effects of disturbing factors, such as [illegible] of light, wind, barometric pressure, temperature, etc.

It must not be supposed, however, that Schuetzen shooting is of no value to riflemen who aspire to excel with the military or long-range rifles. It has the advantage of using very cheap ammunition, it is generally done on ranges provided with facilities that insure comfort to the shooter during even the coldest and most disagreeable weather, and it is the best possible training for fine holding. Therefore it is far better for the rifleman who would keep in practice to shoot 50 or 100 shots at 200 yards, say once a week or two weeks during the winter with a Schuetzen rifle, than to abandon the game altogether during that time.

There are a large number of civilian riflemen who confine themselves almost entirely to this kind of shooting and who are nevertheless very well posted and skillful riflemen, able to take up other branches of rifle shooting at short notice; and their skill in holding, and intimate knowledge of the many technicalities of the rifle learned by long and careful practice with their own weapons, certainly put them far in the lead of the novice, no matter what other branch of rifle shooting they adopt.

But it is in long-range shooting, undoubtedly, that the riflemen finds the highest development of the sport. And in late years, since the advent of the modern smokeless powder rifle of high power and small caliber, it is gratifying to note in our American makes, particularly the Winchester and Remington rifles, as well as in the British weapon that the military and match rifle have approached very near to each other. In the old black powder days the match rifle, with its paper patched bullet, heavy charge of powder, and necessity of cleaning after each shot, was a far different weapon than the military rifle. In those days to attempt to shoot 1000 yards with a military rifle would have been considered the height of folly. But now there is little difference in the scores made with match and military rifles at these long ranges. Indeed, our military Krag, with a good barrel can be selected and when the drag is removed from the trigger pull, is, in the opinion of many expert riflemen, fully capable at the mid and long ranges of holding its own against the finest match rifle that can be produced

There are few target sights that afford better aiming than the 1901 model Krag sight, and while it is true that the target sights, as a rule, are further apart and adapted to the back position, the modern high-power rifle seems to shoot so much better from the prone position as to more than compensate for any slight advantage the target sights might thus gain over our military sight. A glance over the records of those long-range matches of recent years that have been open to both military and match rifles will show that in 90 per cent of the matches the Krag has come out victorious. Indeed, the remarkable development of accuracy of the American high-power rifle within the past few years has not been due to any particular refinement in the weapon or sights, but solely to the improvement in the bullet and in the more uniform measuring of powder charges.

The National Board for the promotion of rifle practice is urging the construction of long-range butts, properly protected, for the use of citizens in general, who would perfect themselves in the use of the military rifle.

This, the board figures, is a healthy recreation and a qualification serviceable to "Uncle Sam" in case of an emergency.

The equipment of a number of ranges for rifle practice at 500 to 1500 yards can be secured only by government appropriation. Work with the Schuetzen rifle can be carried on over private ranges up to 200 yards, but proficiency with the military rifle can be obtained only by practice at the longer ranges in a kneeling or prone position.

To procure a tract of land for this purpose, with proper back-stops, butts, targets, etc., within such a reasonable distance of a large city as to admit of practice by civilians on Saturday afternoons and holidays, requires the expenditure of more money than rifle clubs can afford.

Practice with the long-range weapon is what the government desires from its citizens, and it is therefore proper the government should furnish the weapons and the ranges. A few million dollars would provide every State with a number of ranges accessible to those who desire to familiarize themselves with the modern military rifle. Congress can well afford to encourage a sport which trains the citizen soldier in long-range shooting, even if a few creeks are left unimproved in the back country.

One-sixth of one per cent of the annual expenditures of the government, if the plans of the National Board for the promotion of rifle practice are followed, will provide the country with a national marksman's reserve of one million men within five years and afford one million male citizens sport and recreation of a highly beneficial character.

The recent manouvers carried out by detachments of the regular army and bodies of state militia were all a part of a well formulated plan for not only familiarizing the men with operations such as might be conducted under conditions of actual war, but also to increase the average of marksmanship in this country and make it a nation of riflemen. When Elihu Root took the department in Mr. Roosevelt's cabinet, it is said, according to the Army and Navy Journal, that the object he held most at heart was a more proficient system of training the regular and militia troops of the United States to shoot coolly, often and straight. Therefore, not only were the mixed military manouvers advocated, but national competitions for riflemen of both the regular and the national guards troops begun. This summer has seen several manouvers of magnitude and not a few competitions, in which remarkable shooting has been recorded, and the Cabinet is said to be satisfied with the result.

As a matter of fact, however, it is evident that in some respects it will be impossible to carry out this scheme to an extent that will directly affect more than a comparatively small proportion of the men of this nation who would be called on to bear arms in case of an emergency. One of the cherished plans of Secretary of War Root while he was a member of the Cabinet, was to introduce in this country the militia methods of the European continent, where every man is taught to handle a gun, and where, it may be said without exaggeration, every man is a soldier. The fallacy of such a plan in the United States may be seen readily. In America, only a small proportion of the citizens enter the militia; a much smaller proportion serves in the regular army. Therefore, if this is to be made a nation of riflemen, it can only be by private enterprise and individual practice. Yet, if official instruction and regular army drill can reach only a few of the Americans who might bear arms in time of war, it need not be thought that on an average, the American people are less accurate than those of other nations. The innumerable shooting matches popular among the German Americans, the perennial turkey shoot of the south, the gun club tournament of the west and the crack competition by private clubs in the East, afford much practice, without the drudgery of the European military system. The American, moreover, appears to be a fair shot by instinct and when the next occasion arises this generation shall not be found less soldierly than those which have fought the great wars of the republic.

An effort is being made by officers of the California National Guard to secure a large new rifle range in the county of San Francisco which will be suitable for target practice with the high-power Krag-Jorgensen rifle, with which the guard has recently been supplied. Most of the old ranges, including Shell Mound, where the San Francisco organizations have had most of their practice are unsuited to the new rifle, the great range of which makes it dangerous in those places.

On Sunday a number of National Guard officers, including Colonel Thomas Wilhelm, inspector-general of rifle practice; Majors D. A. Smith, Fifth Infantry; George Filmer, First Infantry and H. H. Bush, First Battalion of Artillery, will proceed to Glen Park on the San Mateo electric car line for the purpose of examining a tract at that place reported to be adapted for a target range which would permit of shooting at 1000 yards' distance, and at the same time not endanger the surrounding neighborhood. This tract is near the old recreation and picnic grounds, and is said to offer a large level space, with a high hill back of it, which would collect stray bullets. The street railway fare to it from the ferry building or anywhere in the city is 5 cents.

Should this tract at Glen Park be deemed suitable, and obtainable at a fair price, it is proposed that an assessment be levied on each company of the First Infantry, First Artillery and Troop A of the cavalry, and also upon such companies of the Fifth Infantry located in Oakland and Alameda as may wish to use it, the money thus raised to effect an immediate purchase. Should this be done it is thought that the range may be sufficiently well advanced within a short time to permit its use by the militia in January.

GOSSIP FOR SPORTSMEN.

THE BIGGEST SHOOT FOR 1905.

The Multnomah Rod and Gun Club of Portland, Or. is planning an international shoot for the 1905 fair. It has behind it the sportsmen of the whole coast, including men from California, Utah, Montana and British Columbia. It has already announced its intention in the Eastern sporting papers and hopes to get men from as far away as England.

This is a big enterprise. The men who take an interest in gun clubs are necessarily well-to-do or they could not afford the sport. It takes anywhere from $250 to $1000 worth of shells to put a man in shape for a match. If the Eastern shots are drawn by it, it will be equal in size to the American handicap, an annual event of consequence. But it will cost money. The Rod and Gun Club fears it will have to have the termerity to ask the Lewis and Clark Board to put up $5000, and will raise $2500 itself. The money is for prizes. There has to be a big fat money bag to shoot for or the shooters won't come. But even if the fair board cannot see its way clear to spend anything on the tournament, it is probable that members of the Multnomah club will see it through, for the members as in all gun clubs, are more or less wealthy. They have taken an interest in the shoot and wish to see it a go. In fact, they can hardly fall down on it now, for they have already announced it in the East.

Aside from the fact that the holding of a large shoot gives a city prestige, the class of men who will come to it will make it worth while. In the Northwest alone are men who have spent thousands of dollars and months of time breaking the blue rocks in preparation for a trap shoot. In this state and the East are hundreds of good shots, continually looking for good competitions. These are men who would never think of attending the fair except in pursuit of their favorite hobby. And when they come they will spend plenty of money.

The Multnomah Rod and Gun Club held a meeting recently to make the preliminary arrangements for the shoot. It was found necessary first to obtain money sufficient to make purses that would draw, and it was agreed that the fair board should first be approached to learn what it was willing to do. If the money is raised all that is necessary is to give the date, bruit it aboard with the prizes stated, and the shooters will go there by the hundreds.

CLEAR LAKE FISHING.

Black bass angling is excellent in Clear Lake at present The bass have increased to such an extent in the lake that they are making appreciable inroads on the carp.

PRESS COMMENT ON GAME LAW CHANGES.

Changes are proposed in game and fish laws that will appear to the people as a monopoly in the interest af professionahle sportsmen. It is proposed to make the sale of any game illegal, but to permit its killing. True, the hag is restricted more than under the present law, but it is exclusive and the puhlic is shut out. We thlnk a far wiser measure and more agreeahle to puhlic sentiment would be a law prohihiting all killing of game and taking of trout for a term of years, treating everybody alike. If this closed term he for five years, the conditions at its end would fix the limitations upon the taking of game. Such a season of uninterrupted increase of game would greatly increase our game hirds and animals, and give the gun and gunners a rest.

We know of no way in which a law permitting killing of game, and denying its enjoyment to the general puhlic, can he made to seem right or he made popular. Exclusive privileges are detested in every country where they exist. No doubt something is to be said in their favor hy those who propose the change, and they should make themselves heard, if they have aught to say that will bring to their aid the puhlic opinion which will he found necessary to pass the law they propose.

It is believed that under the present law much slaughtered game is spoiled unused. When a hunter kills three deer, as he is now permitted to do, part of the venison may spoil. If he were permitted to expose and sell it in the market it would be saved and consumed by those who desire that food and are now denied the right to buy it. This would not he pot hunting, and use of the meat would not increase the slaughter. We believe the people think the present law is sufficiently exclusive, and that if there is to be any change it should he to close the season for five years.—*The Call.*

William E. Gerber of Sacramento, one of the State Fish and Game Commissioners, will oppose the State Sportsmen's Club in its efforts to have the next Legislature pass a law prohihiting the sale of wild duck in the open market. Such a law would be obnoxious to the general public and could not be enforced he said. If adopted it would hring into disrepute existing laws for the protection of game and fish and in that way work great harm.

Mr Gerber is in favor of limiting the number of wild ducks a sportsman can kill or have in his possession in one day to twenty five instead of fifty, as at present (in Sonoma county the bag has been limited to twenty-five), hut believes commission houses, vegetable stores, restaurants and hotels should not be limited as to number. He favors a longer open season for hlack hass and would limit the number of trout an angler can catch or have in his possession in one day to fifty, provided that none of them is less than five inches long. He also favors a reduction of the number of deer a man can kill in one season from three to two.

He says the next Legislature will he asked to pass a law prohibiting Chinese from exporting shrimps and fish, which they dry, to the Orient.

"It is proper for California to protect her game and fish," continued Mr. Gerber; "but there is no necessity of prohibiting the sale of wild duck in the markets. They are a migratory hird and are far from being in danger of extermination. It will he a serious mistake for the State Sportsmen's Club to try and have such a law passed. Let its members follow a less selfish course if they want the public to respect game laws that are reasonable. Let them reduce the number they can kill in any one day to twenty-five and live up to it.

"I favored taking quail out of the market and limiting a daily bag to twenty-five as the law now stands because that hird was heing exterminated. Why, I knew two men in the twenty miles hetween Folsom and Shingle Springs to kill in one season 1200 dozen of quail. That was one of many instances. Down in San Diego they complain they are overrun with quail. Well and good. The Commission will soon hegln trapping them down there and turn them loose in this section of the State where they are not numerous. When quail get plentiful I will favor their sale in the market again."

At present there is an ordinance in Sonoma county which prohihits the sale of duck in the local markets and a largely signed protest against the law has heen filed with the Supervisors. The petition will be given a public hearing at the December meeting.—*Colusa Herald.*

There is a run now on of salmon and steelbead in the Paper Mill tide waters. The har at the mouth of the Russian river has been closed for a fortnight or more; a freshet is needed to let the fish swim up stream. Striped hass catches have been good in San Antone Creek and also at Lake Merritt recently.

The generally despised carp has a champion now and then and in this respect the following method of cooking a carp is given by an old fisherman and he claims that it is next to impossible to distinguish it from a hlack bass when cooked according to these directions:

Secure a carp weighing from seven to eight pounds. The smaller ones are objectionable. Cut off the scales with a sharp knife instead of scraping them off, as is the common custom. Open the carp along the hack as you would in preparing a mackerel. If the backbone is to be removed, cut on both sides.

Place the carp in moderately salt water and let it remain for two hours. Then wash thoroughly and if the fish is to he served on the table, cut crosswise in slices three or four inches long.

Lay the fish in a pan and fill same with dressing, chicken dressing with the addition of some onion and a slice of pork hetween preferable. Place in a moderately hot oven where it must be allowed to remain until well done, about two hours.

Before serving it should be put in a hot oven for about fifteen minutes and then served with tomato sauce.

The Growth of the Dog.

Mr. C. G. Davies has a most interesting and instructive article on "The Growth of the Dog" in a recent numbea of *Our Dogs*. After dealing with somewhat technical matter in regard to healthy organs and the preliminary conditions for useful breeding, he goes on to say in the second part of his article that it is unnecessary here to enter into elaborate details of the daily growth of the fœtus. Suffice it to say that at the twenty-fifth day each one will measure little more than half an inch in length and will appear so much flexed that the whole dorsal side assumes a convex curvature and the head and tail nearly meet. The limhs will he represented by bud-like growtbs, and a rudimentary ear and eye will be plainly distinguishable.

From the fifth week onwards, the hitch will require an increasing amount of highly nourishing food. In order to avoid causing her discomfort from detention it is well from this time to feed on the "little and often" principle. Fast exercise, such as running with hicycle or strap, should not he allowed; but the more slow work the bitch can do the more likely will she he able to escape trouhle later. At this time each fœtus is increasing rapidly in weight as well as size hy the growth of the internal organs, and they probahly cause the greatest strain of the whole period on the bitch.

At hirth each puppy is expelled wrapped in the outer tunic from which the mother quickly frees it. Her next operation is to sever the umbilical cord and remove the yolk sac which in the dog persists till birth. A large portion of the maternal part, commonly known as the after-birth, is carried away with the placenta; some of it, however, still remains attached to the muscular wall of the uterus.

There is little douht that wild animals are seldom subject to those complications incident to parturition, with which the fancier is only too familiar. In a state of domestication the animal, even if it has not entirely lost the instinct to do so, is unable to regulate its life to its needs, with the result that insufficient exercise may result in lack of muscular power in the uterus and other evils of a similar nature. As it is not within the province of this article, however, to treat of the whelping hitch and the various complications which may occur at that time, we must leave the matter, with a recommendation to the fancier to treat his animals on common-sense lines, and when in douht as to the advisability of any course of procedure, to take the wild proto-type of the dog as his model.

The pups when horn are lean and hard to the feel, and although both deaf and blind, the absence of these senses is apparently recompensed for hy the unusually powerful olfactory organs. This is hardly to be wondered at, for the sense is this most active one in the dog, and he goes through life guided by "smell" rather than hy sight or sound.

During the first few hours the shape of the puppies can be fully appreciated hy their owner; hut at the end of forty-eight hours all this is altered, and the lean, sinuous, wriggling creatures have changed into plump, complacent animals, with all the angles well filled with fat. The bones of a puppy at hirth are simply cartilage and incapable of supporting weight. As the hones harden or ossify, so do they become capahle of supporting the hody and protecting the internal organs, and the puppy becomes active and fit for an ever-increasing amount of exertion.

The growth of an individual depends chiefly upon the multiplication of the cells of the body. Each cell contains a nucleus and divides probahly like a primitive cell. A limit of growth is imposed by a limitation in the processes hy which the cells are increased, hoth as regards the numher of cells produced and the rate at which they are formed. Heredity probahly fixes this limitation. In the puppy cell multiplication proceeds so rapidly as to exceed waste, and therefore causes the animal to increase in size or "grow." It can he readily understood that a large quantity of nourishing food is required by the animal all the time it is huilding up, cell by cell, the complex machinery of its hody. It can only be understood why, if the puppy is suffering from any drain on its system, such as those caused by internal or external parasites which draw awsy a portion of the nourishment, that growth or cell multiplication partially or totally ceases. Observation leads us to helieve, however, that a check from some such cause, if not of too severe a nature, made he made up for on removal of the cause, and that we shall only have a "backward" puppy. A longer time is required hy a large animal than a small one in which to grow; and we are all aware that a St. Bernard takes double the time a Terrier does to "furnish."

At three weeks old the puppies commence to crawl about and their natural nutriment may he supplemented by a little artificial nourishment, such as finely chopped tripe, than which nothing can be hetter. At nine days old their eyes have commenced to open, hut they will be weak for some days longer, and even at three weeks of age the whelps will be unable to face a strong light. At this time the milk teeth are heginning to make their appearance. Teeth begin to develop long before hirth, and are regarded as more or less specialized placoid scales. Like every part of the living organism, they are huilt up of cells. The permanent teeth are formed below the milk teeth, and as the former increase in size they press upon the roots of the milk set, causing absorption of the roots and the final falling out of the milk teeth. Animals which have a well-developed set of milk teeth are generally considered to be in a higher state of development than those which have milk teeth absent or rudimentary. In the dog the two molars in the upper jaw and the three in the lower are not developed in the milk teeth, hut only come with the permanent set.

As our puppies will he daily getting stronger and more active, a hrief description of the growth of bone may be of interest. Osseous tissue consists essentially of a collagenous animal matter impregnated with calcic salts. This can be proved by immersing a bone in dilute hydrochloric acid for some time, when it will be found that the calcareous salts or limey matter are dissolved out, leaving a soft, flexible substance, which has the exact form of the bone, hut is much lighter. This on being hoiled will yield much gelatine, snd hut little residue will he left.

As already remarked, in the very young puppy the future bones are modelled, so to speak, in pure cartilage. When the process of bone formation commences slight opaque spots, due to the deposit of calcareous salts, and called "centres of ossification," appear in the substance of the cartilage. In a long bone there are usually three such spots, one in the center of the shaft and one at each end. From these three centers the deposit spreads until it eventually meets and closes up everywhere except at the extreme ends of the bone where the bone continues to grow, and remains throughout life as articular cartilage.

Calcified cartilage is not true bone, however, and further changes have to take place to convert it into osseous tissue, the details of which it is unnecessary to enter into here. Suffice it to say that the whole process occupies probahly from one to two years in the dog, and that until it is completed the bones are not "set," nor has the dog ceased to develop. One would hardly suspect from the appearance of a hone that throughout the greater part of life, or at any rate early life, the formation of new bone is constantly taking place and the surface of the old being shed, in an analogous manner to the constant shedding and renewal of the cells of the body. That this is so has been proved hy feeding certain animals on a substance which permanently dyes their bones. The longer the time which elapsed since such food was given, the more completely will the colored bone be replaced and covered up by colorless bone.

That the giving of bone meal or similar substances to young animals with the idea of increasing their "bone" can be successful we do not for a moment helieve. Of course every animal must have an opportunity of procuring a sufficient amount of the raw material out of which to form bone; but this sufficiency will be present in ordinary food and water. It is not likely that any quantity ahove this will be converted into hone, as the process must be regulated, as is every other process of cell division, by heredity, and the overplus of material will simply clog the system.

A meat and oatmeal diet (particularly tripe and liver) will contain everything that a puppy needs to build up the wonderful mechanism of its hody without the addition of crude lime or similar raw materials.

DOINGS IN DOGDOM.

NEWFOUNDLAND DOGS.

The Simon-pure Newfoundland, in the country from which it took its name, is about as scarce as hen's teeth; in fact, we doubt if the breed is found at all in old-time purity or resemhlance. The hest snd purest Newfouudlands, at the present day on this continent we firmly helieve, writes H. W. Lacy, to he some dogs we saw in St. John, New Brunswick, and naturally it is entirely within the hounds of probability that these are descendants of stock hrought from Newfoundland. According to a dispatch from Washington, D. C., "the demand for Newfoundland dogs has heen so great of late that a dealer in this city declares the supply has been exhausted; that he is unable to ohtain a single thoroughbred specimen. He wrote a short time ago to the American Consul at St. Johns, N. F., asking at what price he could obtain thoroughhred dogs there. The consul replied that he had made an investigation and found that Newfoundland pups could be bought at $10 a piece. The dealer prepared to give an order for ten young dogs Before sending, however, he received information from the consul that further investigation demonstrated the fact that there was not, as far as could he ascertained, a thoroughhred Newfoundland dog in the whole island, all having been crossed with honnds and other dogs. The consul stated that he learned that the only person known to possess a pure hreed of Newfoundland dogs was a man in Pennsylvania. The dealer wrote to the latter, only to be told that the demand for his dogs was much greater than he could supply, and that orders had been placed which precluded any more for several years. 'It is well known,' said the dealer, 'that the smooth hreed of Newfoundland is extinct, but that the other varieties are so nearly so as to render the obtaining of one practically an impossibility has come upon me in the nature of a surprise. The smooth Newfoundland had a rather small head and was white in color with hlack spots. The breed desired now, which I have been endeavoring to obtain, is the very large sort, with broad muzzle, head raised, noble expression, waved or curly hair and bushy, curled tail; black and white in color. A smaller, almost hlack breed is also desired, though to a less extent, and is ahout as difficult to obtain.'" The dealer's descriptions entitle him to the credit of possessing the ordinary run of knowledge on the breed that these men usually have, hut the fact remains that if anyone would like to go into a big breed that would be at once remunerative and afford a lot of good fancier work in bringing it to the front again, the Newfoundland is the hreed. As a hreed, it has deteriorated in England, hut there are still good specimens to be had if price is no object.

SPARE THE ROD.

Don't beat your dog; whip him with a light switch, and be sure he knows what the chastisement is for. If he is fully aware of what he is heing punished for, which is sure to he the case if you render the switching soon enough after his misconduct, he will mend his ways and obey you; hut if he thinks you are whipping him just because you enjoy the proce ding he will fear you and act worse than ever. Several and

Pointers are more willing to do right than the most obedient kind in the world, and you have only to take care that they thoroughly understand you to get the best of service out of them. If the dog does not know what you mean it is your fault, not his. He cannot understand you if you will not understand him.

PHILADELPHIA SHOW.

The 44th annual show of the Philadelphia Dog Show Association began on the 22d inst. and closed last Saturday evening—a four days' successful exhibition. The show was a four point show with 1051 canine and 678 dogs as against 849 entries the year previous.

The judges were: Mr. E. N. Barker of New York: Greyhounds, Collies, Poodles, Airedales, Bassethounds, and Black and Tan Terriers. Mr. C. G. Hopton of New York: Deerhounds, Russian Wolfhounds, Foxhounds, Pointers, Old English Sheepdogs, Dalmatians, Dachshunde, Scottish Terriers, Yorkshire Terriers, Pugs and miscellaneous. Mr. H. W. Lacey of Boston, Mass.: Mastiffs, Bloodhounds, St. Bernards, Great Danes, Beagles, Irish Setters, Pomeranians, English Toy Spaniels, Japanese Spaniels and Toy Poodles. Mr. James Mortimer, of Hempstead, L. I.: All Setters, Chow-Chows, Bulldogs, Sporting Spaniels, French Bulldogs, Bull Terriers, Fox Terriers, Welsh Terriers and Whippets. Mr. Walter E. Stone of Boston: Boston Terriers.

In the large breeds, with the exception of Great Danes, there was a rather slack entry. English Setters were strong classes—the best in the East, so were Irish Setters and Gordons, and made up a fine local entry. Pointers were rather well represented and made a good showing.

Airedailes, as usual, in the Philadelphia show were an exhibit of the best in the country. The local entry was strong and several new dogs of much merit were seen. G. S. Thomas' Endcliffe Royalist went through four classes and winners. R. H. Johnson's Red Sunlight, in bitches, went through to open, and then followed York Kennels' York Sceptre in open and winners. Bull Terriers were good. Irish Terriers were also good, several new "Micks" being put in, the local entry of puppies was strong. Endcliffe Kennels and Borthwick Kennels were one, two in winners for both sexes. Bostons were excellent, what there was of them. In Scotties and Welsh Terriers the entry included the best to be found in the county. Whippets were a strong entry, and Toys were choice.

Collies were a feature of the show. The J. P. Morgan entries, both sexes, taking winners and principal awards. Southport Strategy and Parbold Parity taking the premier honors. Glen Tana Bounder was third limit and res open, very good wins in the company he was in.

Glen Tana Talent, first hitch puppies and special for best puppy was a clever win for the Spokane fancier, Mr. Griffith. Talent went second novice reserve limit and open—a race that argues well for her future showing.

French Bulldogs were strong in quality and in classes. Cockers and Sporting Spaniels were well represented in merit and numbers, the principal kennels in the East being at the front in these breeds.

Fox Terriers brought out a bunch of the talent. Wandee Kennels' Wandee Knight (Ch Sabine Result-Wandee Seabreeze) under Stanley Lomas'—in a sprint from puppies to winners was one of the features of the show. This is a great win for the local kennels—a puppy bred here and sent East to a big show where he "walloped" dogs from the five leading Fox Terrier kennels in the United States and Canada. In puppy bitches Wandee Kennels took what was in sight. Wandee Violet first limit gave way to Sabine Victory in open and winners.

In wire-hairs, Ch. W. Coastguard first open and winners led over the colors of the Rutherford kennels. In limit bitches W. Manlla preceded several of the erstwhile Selwonk cracks. In open bitches, Mrs. H. R. Barry's Hot Stuff was too warm for W. Lucretia; hut this little interruption to the Wandee annexation of ribbons was changed by Manlla's first over H. Stuff in winners. Taking it all in all it was a "big day" for the Menlo Park kennels.

The "variety" classes were evidently liked by the exhibitors for they were well filled, 150 entries about; all of these, excepting the novices, were represented by toppers. The championship class was one to be remembered, 21 teams being entered in that class.

The judging went along without a hitch and the arrangements for the show this year were admirable. The entries and dogs as given out by Secretary Price were as follows:

Brace and team class, entries 56, Bloodhounds 5, dogs 3, St. Bernards 10-0, Great Danes 29-16, Deerhounds 5-4, Russian Wolfhounds 22-14, Greyhounds 13-11, Foxhounds 6-5, Beagles 49-41, Pointers 27-21, English Setters 43-32, Irish Setters 22-13, Gordon Setters 15-13, Collies 64-39, Collies (smooth) 2-2, Old English Sheep Dogs 15-9, Dalmatians 29-22, Chow Chows 15-8, Poodles 16-12, Bulldogs 46-31, Clumber Spaniels 12-8, Field Spaniels 10-9, Cocker Spaniels 55-35, French Bulldogs 41-33, Airedale Terriers 57-37, Bull Terriers 39-25, Boston Terriers 41-27, Bassetts 1-1, Dachshunde 20-18, Fox Terriers (smooth) 56-27, Fox Terriers (wire haired) 55-26, Irish Terriers 26-20, Scottish Terriers 22-17, Welsh Terriers 5-5, Black and Tan Terriers 8-6, Whippets 22-13, Yorkshire Terriers 5-5, Pugs 4-3, Pomeranians 13-8, Toy Spaniels 61-48, Toy Poodles 2-2, Miscellaneous 3-3. Total entries 1051; total dogs 678.

COAST COLLIES WON.

Mr. Thomas S. Griffith wrote us too late for publication last week: "Just received wire from Ben Lewis at Philadelphia Show, that Glen Tana Talent, a bitch puppy owned by me, sired by Glen Tana Bounder, dam Glen Tana Laura Lea (the winner here at Seattle, also dam of Balmoral Duchess, the best bitch in U. S.) won first in puppy class. That under was only beaten by Morgan's entry, so he must have been placed over a lot of crack Collies."

AN ART WORK IN SETTERS.

Mr. John W. Considine of Seattle will have a large portrait of Dan Thiers and Jessie Rodfield painted and has placed the commission for the work of art with Professor Esmond Osthaus. The pictures of these two famous English Setters, needless to say, will not only be true to life, but will also be environed by a typical hunting scene.

A good way to deal with a dog that is suffering with tapeworms is to fix a particular morning upon which it is intended to give him a dose of vermifuge. The night before let him go to bed supperless and in the place of his supper give him a dose of sweet oil, from a teaspoonful to a quarter of a pint, according to the size of the dog. The sweet oil is to be given him overnight. The next morning, first thing, give the animal a capsule or two of extract of male fern (any good druggist will regulate the dose according to the size of the dog). This is one of the best and most effective remedies for tapeworm known and can be depended upon when everything else fails. Follow this dose in half an hour by a brisk aperient of castor oil and as soon as the dog has taken the castor oil feed him a good hot broth, as, not having had any food for some time, he ought to eat it readily. This warm broth will assist action, and there should be good results in about one hour if the dog be allowed to run about. Do not fast the dog any longer than the period mentioned, as it is quite long enough, and any longer period may result in the dose being ineffective.

There has been some talk of getting up an angling contest between the roach fishers of England and France and we have heard it stated that this would be rather a soft thing for the British anglers. We are by no means confident of this, as some of the Paris fishermen are extremely expert, as anyone who has seen them wielding their huge rods can judge. A contest which took place the other day at Chatelleraut, on the Vienne, will give our readers some idea of the enthusiasm of French anglers. On the day appointed the Mayor of Chatellerault, heading a procession consisting of a band, the Corporation, and various societies with hanners flying, marched to the station to meet a train from Paris bearing nearly 2000 anglers laden with appliances for catching fish. At the public square lots were drawn for places, and the line of anglers extended for about four miles. The contest was started and terminated by means of bugles and when time was called it was found that some 80 pounds of fish had been captured. The best catches were a carp and a bream of about 13 ounces each, and numerous eels of half a pound. It is estimated that over 10,000 people watched the match, and the proceedings terminated with a grand banquet and a dance.

The Late Francis G. Du Pont.

Mr. Francis G. Du Pont, a well known member of the great powder company, passed away at his residence near Wilmington, Del., on November 7th. His demise was due to a stroke of paralysis, having been stricken down the previous Saturday whilst sitting at his writing desk in his home.

He was the inventor of a number of processes and also machinery for making powder and was one of the best known members of the gigantic powder concern. He was a man of genial disposition and enjoyed the esteem of a large circle of business associates as well as social acquaintances. He was much interested in the affairs and work of the Episcopal Church and was the Senior Warden of St. John's Episcopal Church in Wilmington. He had also been the secretary and treasurer of the Church Club of Delaware since its organization and held various other responsible positions in the diocese. Of late Mr. Du Pont had not been actively engaged in the management of the immense powder plant, but retained his interests. He was fifty-three years of age and leaves a wife and eight children surviving him.

Arizona Sportsman's Association.

The tournament of the Arizona Sportsman's Association was held at Tucson on November 24th, 25th and 26th, 1904, and proved to be a thoroughly successful and enjoyable event in the history of Arizona inanimate target shooting. Among the notable non-resident shooters were Messrs R. C. Reed of Selby & Co., W. H. Seaver of the Winchester Repeating Arms Company, H. Justins of the U. M. C. and Remington Arms Companies, C. Julian of San Diego, H. Money of New York, W. J. Rand and W. J. Peck of El Paso and many other high high-class shooters—lack of space preventing individual mention. The utmost good feeling, sportsman-like conduct and absence of friction marked the entire meeting, and the Arizona Sportsman's Association is to be complimented.

Mr. R. C. Reed in the three days' shoot was high average with 92.8 kills of 425 targets shot at. This exceptionally fine showing was made with his old, reliable Remington shotgun.

During the first day, among the professional shooters, Mr. Reed made the score of 136 out of 140 birds shot at. Mr. Aitken of the amateur class, following closely with 135 out of 140 birds, using U. M. C. ammunition, again demonstrating the reliability of the U. M. C. shells. The Gwynn trophy event was won by the Phoenix team consisting of Messrs. Aitken, Tanner and Harrison—Aitken and Harrison using U. M. C. ammunition. The Copper Queen trophy was won by Mr. Pickett with 25 straight kills—a remarkably fine showing.

On the second day, the Palace event was won by Messrs. Marin and Tanner, who divided the purse (Marin using U. M. C. shells.) The four-man team contest for the Association's diamond medal was won by the Phoenix shooters, Messrs. Morroll, Tanner, Aitken and Harrison (Aitken and Harrison using U. M. C. ammunition.) In the Merchandise shoot, Aitken, Tanner and Rand tied for the first prize, which was won in the shoot-off by Mr. Aitken, with a score of 19 out of 20 (Mr. Aitken using U. M. C. ammunition.) The McVeigh handicap on the third day was won by George Julian of Tucson, using U. M. C. shells. Messrs. Steinfeld and Ives won the two-man team race.

At this meet of the Arizona Sportsman's Association, there were 34 contestants, nine used the Remington shotgun, thus again demonstrating the shooting qualities and reliability of this arm.

The final day's shoot of the Arizona Sportsman's Association was held Nov. 27, 1904, at Tucson, and to vary the program, live bird shooting was indulged in.

First race, 25 birds, $25 entrance, three moneys. Three high guns, Aitken, Tarner and Graham, all of whom used "U. M. C." ammunition again emphasizing the reliability and perfection of "U. M. C." shells.

Second race, 10 birds, $2 50, three moneys. High guns, Purcell, Valentine and Julian and McMahon dividing third money—all using "U. M. C." ammunition

There were 23 contestants, 15 of whom used the "U. M. C." shells. Too much credit cannot be given the managers of the tournament, Mr. K. L. Hart, George Julian, W. H. Julian and J. Ronstadt for the completeness of arrangement for the comfort of the shooters, all of whom were loud in their praises of these gentlemen.

Winchester on Top Again.

As usual, shooters of Winchester goods carried off the honors at the Twelfth Annual Tournament of the Arizona Sportsman's Association, which was held at Tucson, Arizona, November 24th, 25th and 26th. Of the thirty-four shooters that faced the traps at this tournament, twenty-seven shot the Winchester make of shells, as follows: Nineteen used the "Leader" shell, and eight the "Repeater" shell. In addition ten participants shot the Winchester "pump" guns. The high amateur average of the tournament, 90⅘% was made by W. D. Tanner of Phoenix, with a Winchester "pump" gun and the "Leader" shell. The longest straight run, 68, was made by W. H. Seaver of San Francisco, with a Winchester "pump" gun and the "Leader" shell. The second longest straight run, 63, was made by W. D. Tanner, shooting the same combination. The high score in the Gwynn team trophy event, shot for on the first day of the tournament, was made by the team composed of R. C. Reed of San Francisco, Harold Money of New Haven, Conn. and W. H. Seaver of San Francisco. Score of the team 83 out of 90. Messrs. Money and Seaver shot Winchester "pump" guns and the "Leader" shells, while Mr. Reed used a Remington gun and the "Leader" shell in this event.

The Copper Queen trophy, shot for the same day, was captured by Thos. M. Pickett of Prescott, on the score of 25 straight, with a Parker gun and the "Leader" shell. Mr. Pickett made the only straight score in this event. The miss-and-out event that closed the program of the opening day was won by K. L. Hart of Tucson with 29 straight with a Remington gun and Winchester "Repeater" shells. The Palace event, shot for on the second day, was tied for by M. E. Morin of Prescott and W. D. Tanner of Phoenix, on straight scores of 25 each. Both Mr. Morin and Mr. Tanner used Winchester "pump" guns and the "Leader" shells. The high score in the Individual championship diamond medal event, 48 out of the possible 50, was made by W. H. Seaver of San Francisco with a Winchester "pump" gun and the "Leader" shell. Mr. Seaver not being eligible to win this medal it went to W. D. Tanner of Phoenix, who made the splendid score of 46 out of a possible 50. As stated before Mr. Tanner used a Winchester "pump" gun and the "Leader" shell. Mr. Tanner also won the miss-and-out event that closed the program of the second day with the score of 30 straight. The Double Stamp event, shot for on the closing day of the tournament, was captured by I. Ives of Bisbee with a Smith gun and the "Leader" shells. The McVeigh handicap medal, shot for on the same day, was captured by George Julian of Tucson with a Winchester "pump" gun and Winchester "Repeater" shells. The two-man team trophy was won by I. Ives of Bisbee and Harold Steinfeld of Tucson, on the combined score of 45 out of the possible 50. Mr. Ives used a Smith gun, Mr. Steinfeld a Remington. Both shot Winchester shells. The miss-and-out event that closed the tournament program was won by W. D. Tanner of Phoenix, with the score of 23 and with a Winchester "pump" gun and "Leader" shells.

Some More Parker Records.

Fred Coleman still holds his own with all comers. At Plumsteadville, Pa., Oct. 25 he scored 170 out of a possible 175. 40 straight from the 16 yard mark and 135 out of the 140 at 20 yards rise, with quite a good stiff breeze blowing. Mr. Coleman in his shoots sticks to the "Old Reliable" Parker.

Frank H. Snow, Brooklyn, O. at Hamilton, O., on October 18 and 19 won high average breaking 360 out of 370 for two days shooting. At Freemont, O., on October 21 Mr. Snow and his "Old Reliable" Parker broke 149 out of 155 singles and 14 out of 20 pairs, making a total of 163 out of 175 for the day. All of these records speak volumes for the "Old Reliable" Parker to which therefore you should pin your faith if you would win at the trap or in the field.

One of 1000.

Among the many testimonials received by the Ithaca Gun Company is the following from P. N. Clute, manager L. Erhardt Co., Sporting Goods, Atchison, Kan., who states: "Have had several opportunities to use the No. 4 ejector gun, and it is as good a shooter as it is fine in looks. Am a new hand at the game, have been shooting but a month, and yesterday broke 19 out of 20 targets. It is the finest gun of any make in this vicinity."

Care of Manes and Tails.

A correspondent wants to know how he may keep his horses' manes and tails in shape, how he may make them grow and how he may make them look their best, says the *Breeders' Gozette*. To begin with much depends on the mane and tail. There are some hirsute things of the kind that do not, and never can be made to, adorn their possessor. For instance, a rat tailed horse can never be forced to sport a nice full tail unless one is pinned or strapped to the crupper. Similarly a horse that has a naturally ragged mane, twisted and irregular in its habit and direction of growth, will never look very neat about this part of his neck. However, cleanliness is the first thing to be looked after. If dirt is suffered to accumulate at the roots of the long hair the horse will rub and destroy it. Therefore good honest soap and water is a mighty aid to keeping manes and tails looking well. A little tar sheep-dip solution used periodically at the roots of the long hair will stimulate growth measurably and kill or repel vermin that may have found or seek a lodgment. When a horse is rubbing his tail, which he always is when anything is wrong, the first thing to be done is to discover the cause. Then apply plentifully soap and water and the solution described. One part of the dip in 50 of warm water is right as to strength. Then the mane and tail should be kept clean by the use of comb and brush and more or less frequent washing. The long hair should be dried as well as possible after each scouring and when the dip solution is applied there is no need to slop it over so that it runs down and away from the skin where it is needed. It should be rubbed in briskly for a few moments. The mane and tail should always be handled gently. It is very easy to tear out great quantities of the long hair with a common currycomb, and in that very way much damage is done. A currycomb should never be used on mane or tail. Use the comb specially designed for the purpose. The tail should never be plaited to make it look crinkly. To plait it is to break off the hair and in time spoil the looks of the tail. If the mane does not lie just right it may be trained to do so by arranging as wanted and then weighting with strips of lead. Too thick and bushy a mane is not desirable.

A Bad Mix-Up.

As a result of a decision of the judges at the recent meeting at Valley Track, Cleveland, R. J. Gaffney of Bradford, Pa., who owns the pacer The Judge 2:11¾ by Bellini, the final settlement of the free-for-all pace will be left to the board of appeals of the American Trotting Association, Mr. Gaffney having entered a protest against awarding first money to Little Squaw, claiming that The Judge is entitled to it. The circumstances which caused Mr. Gaffney to take this action are: Chestnut Star won the first heat of the race and Belle Mac the second. In the third heat Belle Mac, in trying to take the pole on the first turn, cut in so quickly in front of Chestnut Bird and Little Squaw that those two horses collided, both sulkies being smashed. Judge was following so closely that his driver was forced to pull him almost to a standstill to avoid getting mixed up in the wreck, but finally got around them and finished the mile second to Belle Mac, those two being the only ones to finish the heat. The judges declared the heat to be no heat, but after The Judge had won the next two heats, Mr. Gaffney claimed the purse, which claim was not allowed, and in the next three heats, which were paced at the order of the judges, Little Squaw won and was declared winner of the race. Mr. Gaffney claims, and with reason, that the judges had no right to penalize The Judge when he was not a party in any way to the accident, and that according to rule Belle Mac, who caused the accident, should have been ruled out of the race at the conclusion of the third heat and entered protest accordingly to the secretary of the American Trotting Association.

Horse Pastures.

It sometimes occurs that on some farms breeders are obliged to pasture their animals on marsh lands, says a horseman. Grasses produced on swamp land do not possess the nutritive properties of forage grown on upland pastures, and young animals grazing on low lands should have a daily feed of grain to maintain thrifty condition. Even in Kentucky, on the nutritious blue grass pastures, the most progressive farmers achieve the best results in the growth of young stock by supplementing the grass ration with a feed of oats and bran or corn and bran daily. Flies are more aggressive on marsh lands than on high pastures, and the general condition of rapid development of young stock is unfortunate on low pastures. Unless the foals are fed daily rations of grain when restricted to wet pasture lands, they will make indifferent growth and come to winter quarters in poor condition. In horses in particular it pays to feed liberally to develop extra bone and muscle to give the animal stamina, symmetry and endurance.—*Indiana Farmer.*

Cavalry Horses.

The United States army regulations relating to chargers and cavalry horses read as follows: "The cavalry horse must be sound and well bred; gentle under the saddle; free from vicious habits; with free and prompt action at the walk, trot and gallop; without blemish or defect; of a kind disposition; with easy mouth and gait; and otherwise to conform to the following description: A gelding of uniform and hardy color; in good condition; from 15½ to 16 hands high; weight not less than 950 nor more than 1150 pounds; from four to eight years old; head and ears small; forehead broad; eyes large and prominent; vision perfect in every respect; shoulders long and sloping well back; chest full, broad and deep; barrel large and increasing from girth toward flank; withers elevated; back short and straight; loins and haunches broad and muscular; hocks well bent and under the horse; pasterns slanting, and feet small and sound. An officer's mount may be a gelding, stallion or mare. Docked tails not authorized."

American Carriage Horses.

To aid in the establishment of a breed of American carriage horses the Government has appropriated a sum of money which will be expended under the direction of experts headed by Prof. Carlyle of the Colorado Agricultural College. In speaking of the plan proposed, which is to start with the American trotter for a foundation, Prof. Carlyle says:

"This country spent a million dollars last year on imported coach horses. What became of them? They do not show up much at the fairs and shows, and they seem to cut very little figure in the horse markets of the country. We propose to build up the American carriage horse by careful selection from standard-bred light harness horses. We would get quicker results that way, for cross-breeding is altogether too uncertain. The average American trotter is not thick enough, not round bodied enough, is too straight necked and lacking in style, but by picking 15.2 to 16 hand mares and the best stallions we can get, these points ought to be remedied without trouble. We think the climate, altitude and feed of Colorado will develop better feet, higher courage and sounder lung capacity. We are told that by discarding the established types of coachers it will take us much longer to develop what we desire; but if we succeed in making, as we expect to do, an American carriage horse that will be recognized the world around, we can afford to be deliberate and sure in the preliminary stages of the work."

CHICAGO, ILL., April 3, 1891.

Dr. S. A. Tuttle, Boston, Mass.

Dear Sir:—Having tested your Elixir for the different purposes for which you recommend it, would say: We use it on all horses in our department, and I must state that I have not found one instance where I have not received more benefits than advertised. We adopted it in our whole department. Men as well as horses are using it, and I cannot speak in terms of too high praise of it as I never saw its equal. Yours very truly,

DR. EUGENE SULLIVAN,
In charge of the horses in the Chicago Fire Dept.

The racing men ought to try the Hart Apartments this winter; 3 and 4 rooms, private baths, telephone, steam heat, first class. 750 Ellis street. *tf

Good Stock for Mexico.

The estate of W. H. Howard shipped to Manzanillo, Mexico a few days ago five pure bred Shorthorns from the Quinto Herd, four bulls and one heifer. One of the bulls was King Spicy 73d, fourth premium Shorthorn bull calf at Sacramento this year. A picture of Quinto Herd bull calves was gotten out as a supplement to *Butchers and Stock Growers Journal* and it attracted particular and well deserved attention amongst stockmen. The animals in the picture took premiums in the bull calf class in 1, 2, 3 and 4 order this year, a repetition of last year's performance. We are glad to know that such good stock is going to Mexico as representative of what California is breeding.

Recently in Kentucky it was necessary to abandon a parade owing to the impossibility of obtaining suitable mounts, which is regarded as a remarkable incident in a state famous for its fine horses. Good horses are reported so scarce in Maryland that much difficulty was encountered in obtaining appropriate mounts for the officers of the State militia in the recent army maneuvers on the Manassas battle field. A United States consul in South Africa not long ago said the demand for good horses in that section was so active that Americans can make money by sending over some good stock. The prices he quoted were double those prevailing in this country. The automobile and other machines driven by gasoline and electricity have come to stay, but the horse has not yet been forced out of the market. There is a certain interest attaching to a beautiful, serviceable horse that cannot be felt in a machine. The horse has not yet had his day.

—o—

Scrub cattle are often if not usually the result of skimped feeding as calves or yearlings. To secure best results beef cattle must be kept in the best possible condition from the day they are dropped. By this course they will actually have consumed less feed when ready for market. When cattle are fed in the open have the corrals thoroughly drained naturally or otherwise, but if there must be mud in some part of the corral have it about the feed racks and leave the drier parts clear for the stock to lie down. Have good, clean water accessible at all times and do not compel the stock to drink mud. Have reliable and competent feeders, even if they cost a good deal more than scrub help. It does not pay to have cattle starved one day and surfeited the next, with the accompanying waste of feed.

—o—

The California Promotion Committee has received a letter from F. L. Houghton of Brattleboro, Vt., secretary of the Holstein-Friesian Association, saying that the association will hold its convention next year in this city. The committee invited the association to meet here some weeks ago. The association is composed of Holstein Friesian breeders throughout the United States. The members are all skilled in discerning the fine points in fancy Holstein-Friesian stock

PACING 2:11¼-4 **RITA H.** TROTTING 2:14 1-4

FOR SALE.

RITA H. is by McKinney 2:11 1-4, dam Smut by Prompter.

She is a dark brown mare, stands nearly 16 hands high and weighs in racing trim 1050 lbs. In 1903 she started eight times on the Washington and Oregon Circuit, won her first seven starts and only lost four heats during the entire circuit, getting a pacing record of 2:11¼. In 1904 she was converted to the trotting gait and proved herself a consistent performer, winning most of her races in fast time and getting a trotting record of 2:14¼. She is six years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Her owner has driven her in 2:12½ (pacing) in the Los Angeles Driving Club races, she having won all but one in which she started. This mare is all right and there is not a thing the matter with her, but my business demands are such that I cannot afford to devote any time to racing. For prices and further particulars address

BYRON ERKENBRECHER,
301 Currier Bldg, Los Angeles, Cal.

WANTED TO LEASE.

A McKINNEY STALLION FOR PUBLIC use, on shares or otherwise. Must be a pure gaited trotter and out of a good individual mare. This is a rare opportunity for a horse of merit to make a reputation. Address M. L. L., care of BREEDER AND SPORTSMAN.

The Humboldt Herd.

[Suisun Republican, Nov. 26]

The herd of high-bred cattle recently purchased at Lovelock, Nevada, by Senator B. F. Rush and William Pierce, an account of which was published at the time in the *Republican*, will soon be placed in permanent quarters.

The place selected is the stock ranch comprising the "John Vest" and "Green and Frisbie" tracts of about 1130 acres of land about one mile east of Suisun. The new owners have secured a lease for a long term of years and intend to convert this into one of the model cattle-breeding farms of California. Large barns will be constructed and many other improvements added, with a view to obtaining the greatest possible convenience and comfort in conducting the business.

At least 150 acres of land will be seeded to alfalfa, which is recognized to be a most suitable feed for cattle. Much of the upland is adapted for the growth alfalfa. Water for the irrigation of the same can be obtained at a depth of from 12 to 18 feet from the surface, and cheap power for pumping the same can be obtained from the electric line which passes in close proximity to the farm.

To start with, the herd, which has been named the Humboldt Herd, will consist of 250 head of registered shorthorn Durham cattle. These were purchased from Joseph Marzen of Lovelock, Nevada, who spent over thirty years in developing the herd until it has reached a stage of perfection that has made the cattle famous all over the United States. Mr. Marzen has advertised the herd extensively and it has been awarded blue ribbons at fairs and cattle shows not only on the Pacific Coast but in the Eastern states as well.

It will therefore be seen that this community has gained much by the introduction of this herd into our midst, as the business heretofore carried to Lovelock by Mr. Marzen and this herd will be transferred to Suisun and vicinity, as Messrs. Rush and Pierce purchased not only the stock but the good will of the business formerly conducted by Mr. Marzen.

Messrs. Pierce and Rush have secured the services of R. M. Dunlap, formerly of Galesburg, Illinois, to manage their breeding farm. Mr. Dunlap is no stranger to the leading stockmen of the Pacific Coast as he has had charge of several different herds in California and has been very successful in developing inferior and unknown herds into leading and widely known herds. Mr. Dunlap is recognized not only as an expert but an authority on high-bred cattle, and has had charge of some of the most noted herds in the United States, and the owners of the "Humboldt Herd" are therefore fortunate in having secured his services.

Messrs. Rush and Pierce will follow Mr. Marzen's custom by renewing the breed each year. Mr. Rush and Mr. Dunlap started for Chicago Tuesday evening to attend the Fifth Annual Session of the International Livestock Exposition, opening on November 26, at the close of which the usual stock sale will take place. It is Mr. Rush's intention to take advantage of the opportunity offered by the sales to purchase a carload of high grade cattle to add to the "Humboldt Herd."

Both Messrs. Rush and Pierce are enterprising business men and able and competent to carry out successfully the venture they have undertaken, namely, to develop and raise the standard of cattle breeding industry in Solano county. This enterprising movement on their part will be watched with great interest by stock raisers of Solano county. The establishment here of this famous herd of cattle means a more complete development of the cattle industry of this section.

The small cattle raiser, who now has [illegible] income of a few dollars per head, by the introduction of pure blood herds, avail himself of the opportunity of getting some of the business that naturally will be attracted to Suisun by this transfer and multiply his income many times over.

By the increase of their incomes under the present conditions of feeding, they will be brought to realize the importance of this branch of the livestock industry and by their increased profits will be further able to improve their present properties by planting alfalfa, and in this way will still further add to their yearly income.

How many dairymen really know what each cow costs to keep? Some dairymen assert that it costs them 20 cents a day, while others place the figure higher then this. A Wisconsin man has a record showing the feed cost at $30.50 a head for the lowest and $40.65 for the highest, while a Michigan herd averaged $35.91 a head for feed costs. An experiment station spent $48.94 for the lowest up to $66.95 for the highest. The producer of milk can not know whether he is making or losing money on his milk unless he knows what each cow costs as well as what each produces. Pencil work on costs of production is always in order on the dairy farm.

—o—

Dairy butter is now manufactured in Holland from Philippine cocoanuts, and is shipped to all parts of the world. This statement is made in a bulletin just published by the Philippine bureau of agriculture, which has been making a special study of the cocoanut industry in the islands. The cocoanut furnishes two distinct commercial products—the dried meat of the nut, or copra, which is worked up into Dutch "butter," soaps and other commodities, and the outer fibrous husk. It has been only within the last few years that food products have been manufactured from copra, although soap has been made from it for decades. Several large factories in France are now engaged in making "vegetaline," "cocoaline," and other products belonging to this infant industry. The Hollanders have succeeded in preparing from these manufactures a respectable looking and tasting butter. At first it was necessary to disguise the product by subjecting it to trituration with milk or cream, but so perfect is the present method of emulsion that the plain and unadulterated fats can be prepared and sold as butter without detection.

—o—

If a man would succeed in the dairy business he must read and keep posted on matters connected with his business. There are thousands of active, energetic dairymen that are constantly discovering new methods and advancing new, bright ideas. Experiment stations are busy solving the problems that surround the dairy farmer. The dairyman who would keep up must read, think and plan. He should strive to keep in the front rank, remembering that "he who follows is always a little behind."—*Wisconsin Agriculturist.*

SAVE-THE-HORSE

Registered Trade Mark

SPAVIN CURE

$5.00 per bottle. Written guarantee with every bottle, as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Positively and Permanently Cures

Bone and Bog Spavin, Ringbone (except low ringbone), Curb, Thoroughpin, Splint, Capped Hock, Shoe Boil, Wind Puff, broken down, sprained, injured and ruptured Tendons. The fire iron is uncertain, and invariably only aggravates disease or injury; blistering is less effective—both necessitate laying horse up. Mercurial and poisonous compounds produce irreparable injury. 'Save-the Horse" eliminates all these factors. Cures without scar, blemish or loss of hair. Horse can be worked as usual. Copy of guarantee, valuable booklet on diseases and injuries affecting horses, and copies of personal letters from bankers, noted trainers, manufacturers and business men of prominence the world over, telling of the wonderful cures it made for them, sent upon application. We advise frankly of possibility of remedy in any specific case. Give explicit particulars; state age, location of swellings, lameness, and the way the horse holds and carries the leg. $5.00 per bottle at all druggists and dealers, or express paid. TROY CHEMICAL CO., Manufacturers, Binghamton, N. Y. (formerly of Troy, N. Y.)

D. E. NEWELL, Pacific Coast Agt., 519 Mission St., San Francisco.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

Poultry Points.

The flesh of fowls fattened on soft food is not as firm as that fattened on dry, hard food.

There may he times when sulphur is a good feed, hut the fowls should he kept dry after feeding it.

If litter is kept in the poultry house too long it hecomes dusty. The litter should he removed frequently

Wheat is one of the hest all purpose foods. It may he fed cooked or raw, whole or ground, summer or winter.

Dry food is the most nealthful for poultry, whether large or small. They need only one meal of soft food a day.

If a chicken gets very sick the best remedy is the ax. It may have a contagious disease, and may communicate it to others.

It takes bigb fences to confine Leghorns and Hamburgs if they are in small yards or are moved from one pen to another.

Fowls in their natural condition are hungry. If they come to their food reluctantly something is wrong with the food or with the fowls.

It can be put like this: Good hens, bad care, poor results; poor hens, good care, bad results; good hens, good care, good results.

It is not best to act upon the suggestion of every item seen in a poultry column. What works well for one may not be the thing at all for another. Good common sense needs to he used very generously.

Little patience and consideration is due the creep-easy chicken man who laziiy hangs his off leg across the rail fence and whittles his wife's potato masher up while he vociferously declares that it is all nonsense to be showing chickens at fairs and shows because all judges are bought before they get to the show.

Chickens can he driven from place to place in large numbers if care is taken. They must not he frightened by loud talk or waving of arms or the slashing of switches. It is easier to drive a large number of chickens than one or two, for something seems to inspire confidence in numbers among chickens as well as among people.

Be careful not to permit the fine cockerels to get to fighting while they are growing up on the range. Sometimes in a fierce battle a single tip will be jerked from a comb and the loss of this tip may mean the loss of the first prize in a national exhibition, the effect of which would he the loss of at least $100 to the hird itself, to say nothing ahout the loss to the general business of the poultry hreeder.

There are many persons who are experts in presenting the heauties and benefits of the poultry business as a glittering, generality, but they fail to comprehend the necessity of giving the closest kind of attention to details, and no person has any business in the poultry business who cannot get down to little things, for it is a business of essentially little things and these little things must he attended to if the poultryman would succeed.

Trouble is sure to ensue upon the advent of lice on feeding stock. When the cattle hegin to ruh on the posts or fences examine them closely and destroy the lice hy spraying with a strong solution of tar product dip, or lessen the food and give some salts in the drinking water if the irritation is found to he due to eczema, which frequently attacks feeding cattle, especially those kept closely confined. Either lice or eczema may cause serious loss of flesh or may retard the gaining process.

——— o ———

In feeding foods containing a large proportion of starch, when fed raw, the larger number of cells are not hroken, and do no good; if thoroughly cooked and starch cells are hroken by the steam and all are utilized as food. Therefore, it pays to cook potatoes, wheat and almost all small starchy grains.

$100 REWARD

for any case of colic, curb, splints, contracted or knotted cords, recent shoe boils, splints or callous that cannot be permanently and positively cured, if directions are followed, hy

TUTTLE'S ELIXIR.

It relieves and cures **Spavins, Ring Bone, Cockle Joints, Scratches, Creese Heel, Founder, Sore Backs and Shoulders, Bruises, Wire Cuts, Collar** and **Saddle Galls, Pneumonia, Distemper, Chafed Places**, etc. Used and endorsed by Adams Express Co., Chicago Fire Department and others. **Tuttle's American Worm Powders** never fail. **Tuttle's Family Elixir** stops the pains and aches of mankind instantly. Our 100-page book, "Veterinary Experience" free.

THOMAS H. WILLIAMS, President.
PERCY W. TREAT, Secretary.

FOR SALE.

ONE OF THE GRANDEST LOOKING AND finest bred young Stallions in California. He is 2 coming 3 years; chestnut with star, and one pastern white; good mane and tail; stands 15¼ hands high: all sound, not a blemish; well broken; never worked for speed a trotter. Sired by Nearest 2:22 brother to John A. McKerron 2:04½. First dam Princess Airlie by Prince Airlie; second dam Minnie Princess, dam of Leonora 2:25 by Nutwood 2:18¾; third dam Belle by Paul's Abdallah; fourth dam Kate Crockett by Langford by Belmont; fifth dam Fanny by American Boy Jr Prince Airlie by Guy Wilkes 2:15¼: first dam Chantilly (4-year-old trial 2:19½, dam of Chanty (2) 2:24, Cascade 2:14¾) by Nutwood 2:18¾; second dam Crepon (dam of Lovelace 2:20, Betsy Britton 2:20¾, Brilliantine 2:29¼) by Princeps; third dam Crape Lisse (dam of King Rene Jr. 2:17, Balzarine 2:27) by George Wilkes 2:22; fourth dam Tarlton mare, dam of Tarlton 2:30 Only reasons for selling is that I have another colt bred the same way and am overstocked. Address

T. W. BARSTOW, San Jose, Cal.

FOR SALE.

A HANDSOME 4-YEAR-OLD BAY FILLY; pacer; stands 16.2¼ hands; sired by McKinney, dam Mission Bell by St Nicholas. Full sister to Mechanic. A smooth-gaited filly, goes without straps or boots, and with less than a month's handling has paced a half in 1:11. Is sure to make a fast pacer. Address or apply to JOHN ROWAN, 1347 East South Street, Stockton, Cal

Two Prince Airlie Stallions For Sale.

MILBRAE 2:16 1-2 by Prince Airlie 28045 by Guy Wilkes 2:15¼, sire of Fred Kohl 2:07¾, Hulda 2:08½, Seymour Wilkes 2:08¼; 1st dam Fearless by Fallis 4781 (rec. 2:23), sire of John R. Baldwin 2:17¼, Fallacy 2:17½, Falrose 2:19, and dam of Janice 2:08¼; 2d dam Jean Perault by Signal 3327. MILBRAE has been in training just one year, getting a trotting record of 2:16½ (trial 2:13) with first half in 1:05, a quarter in :31¼. This is no measure of his speed. He is a seal brown, 16 hands, weighs 1200 pounds, 6 years old.

MENLO BOY 37401 by Prince Airlie 28045 by Guy Wilkes 2:15¼: 1st dam Signal by Del Sur 1098, grandam Lady Signal by Signal 3327. With very little work he has trotted in 2:29½, quarters in :35. He is a brown with white pasterns, 16.1 hands, weighs about 1170, and 5 years old.

For further information apply to

P. H. McEVOY, Menlo Park, Cal

THE AMERICAN THOROUGHBRED AND BREEDERS' HANDBOOK.

It is now nearly thirteen years since Col. Sanders D Bruce published his book on "The Thoroughbred Horse," the editorial portion of which was cut bodily with a pair of scissors from the columns of the *Turf, Field and Farm*, of which he was part owner. I claim only one advantage for my book over his—that it is better edited. It will be properly classified under eight heads, with the English horse in a chapter by himself, the American horse in his own stall and his Australian congener in his own paddock. I shall receive orders for the insertion of stallions at their owners' request at a reasonable charge of which breeders will be advised by circulars. The price of the book, which will contain some 310 pages, will be as follows:

BOUND IN LEATHER, per Copy......$7
BOUND IN CLOTH, per Copy 5

The need of such a text-book will be conceded by every intelligent breeder, for it will be thoroughly up-to-date in every particular; and the reader will not have to look all through the book to find any given horse as I shall see that it is properly indexed One copy of the book to be given gratis to each advertiser and no payment asked till the book is received. All orders for the book or for insertion of stallions' pedigrees to be addressed to

MEN — WOMEN — CHILDREN.
WEAK KIDNEYS CURED FOREVER.

If you have a pain or dull ache in the back it is unmistakable evidence of kidney trouble. It is a warning to tell you trouble is ahead unless you remedy the cause immediately.

Lame back is only one symptom of kidney trouble. Other symptoms are, being obliged to pass water often during the day and to get up many times during the night, inability to hold your urine, smarting or irritation, passing brick-dust or sediment in the urine, catarrh of the bladder, uric acid, constant headache, dizziness, sleeplessness, nervousness, irregular heart beating, rheumatism, bloating, irritability, worn-out feeling, lack of ambition and sallow complexion.

Hooper's Parsley Kidney Pills are proving to be the most wonderful cure ever gotten out for weak and diseased Kidneys. If you have tried the many so-called "cures"—if you have become disgusted with them and stopped using them, try one package of Hooper's Parsley Kidney Pills and you will immediately begin to feel better. Hooper's Pills are a cure. They will stop the trouble just where it is and prevent that awful and dreaded Brights Disease. Don't buy any but Hoopers. The British Pharmacal Co., Milwaukee, Wis., Distributors.

Price 50 cents a box.

HIGH GRADE AMMUNITION

U. M. C. POPULARITY NEVER WANES

RESULTS: MOST SATISFACTORY

YOU WANTED BADLY

to bring home as large a bag of ducks from the marsh as your neighbor, but you forgot

THE MAIN FACTOR OF SUCCESS

which rested in the brand of ammunition you used. There is no need of talking about other brands bringing equal results when all successful sportsmen agree that

U. M. C. AMMUNITION HAS NO EQUAL

and that the best results come from its constant use, either in the field or over the traps. Better try it!!!

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

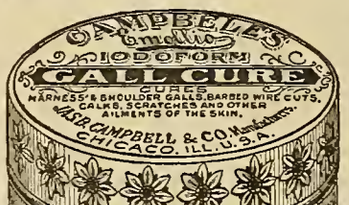
Colts that start at two years old are not barred from starting again in the three-year-old divisions.

Address correspondence to the Secretary.

E. P. HEALD, President. F. W. KELLEY, Secretary, 36 Geary Street, San Francisco.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE



For GALL BACKS and SHOULDERS, CRUPPE SORES and SADDLE GALLS there is non superior.

The horse CAN BE WORKED AS USUAL.

For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.

It is very adhesive and easily applied to a watery as well as a dry sore.

Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1900 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.

It is a quick and sure cure for those troublesome skin cracks under the fetlock which injure and often lay up race horses.

All Trainers Should Have It in Their Stables

PRICE:—3 OZ. BOX, 25c.; 1 LB. BOX, $1.00.

BREEDERS AND IMPORTERS OF

PERCHERONS, SHIRES, BELGIAN AND FRENCH COACH HORSES

Have a Branch Barn at

127 St. John Street, San Jose, Cal.

High-class stock always on band. It will pay to call and inspect stock if you are in need of a good stallion C. O. STANTON, San Jose Manager.

Take It In Time

If you have the remedy on hand, and are ready to act promptly, you will find that there is nothing in the form of Spavins, Splints, Curbs, Windpuffs and Bunches which will not yield promptly and permanently to

Quinn's Ointment

It has saved thousands of good horses from the peddler's cart and the broken-down horse market. Mr. C. B. Dickens, of Minneapolis, Minn., who conducts one of the largest livery stables in the Northwest, writes as follows: I have been using Quinn's Ointment for some time and with the greatest success. I take pleasure in recommending it to my friends. No horseman should be without it in his stable. For curbs, splints, spavins, windpuffs and all bunches it has no equal."

Price $1.00 per bottle. Sold by all druggists or sent by mail. Write us for circulars, testimonials, etc. Sent free for the asking.

W. B. Eddy & Co., Whitehall, N. Y.

San Francisco, Saturday, December 10, 1904.

THE CHRISTMAS NUMBER of this journal, to he issued Decemher 24th, will he profusely illustrated. It will contain a beautiful photo-engraving of the greatest of all trotting mares, Sweet Marie 2:04¾, printed as a supplement on heavy-plate paper, suitable for framing. The cover will he an original design in colors from the hrush of the hest of horse artists, Mr. George Ford Morris of Chicago. There will he many statistical tahles and original articles in this number, which will make it very valuahle for reference. The price of the paper will not he increased hut it will he sold at 10 cents as usual.

DRAFT HORSES hring good prices in this city at the present time as was demonstrated at a sale of fifty head at Fred H. Chase & Co's salesyard corner of Van Ness Avenue and Market street last Tuesday evening. Fifty head were sold, a few of which were pure hreds, hut nearly all were grades. No less than fourteen were two-year-olds and there were a half dozen three-year-olds. The highest price was $240 paid for a six-year-old grey Percheron mare, yet the average of the sale was close to $150 per head. One two-year-old Percheron filly hrought $220. As all these animals were sold without pedigrees, and were in nearly every instance only halter broken the prices obtained show that the market for draft stock is good. It will he hetter in the future as there has heen very little hreeding of draft stock on this Coast for several years past and the demand is so far ahead of the supply that it will take several years hefore hreeders will he able to produce enough heavy horses for the market.

DON'T FORGET that the last payment (excepting the starting payment) is due January 2, 1905, on the foals eligihle to start in either of the divisions of Breeders Futurity Stake No. 2, which are to he trotted and paced next year hy the three-year-olds. Rememher that there is a race for pacers and another for trotters, $1000 is the sum guaranteed the pacers and $2000 the trotters. If you have a colt or filly eligihle to either of these stakes, he sure and make this payment. If you know the youngster is fast you will not need to he reminded of the payment in all prohahility, hut if he has not yet shown any great speed you will he tempted to forfeit. Don't do it, however. The payment is only $10 and all the fast ones may meet with accidents or have something happen to them. The fellow who keeps paid up on a slow colt may win, hut the fellow who forfeits is out of it and has no chance. So make this payment whether your colt is fast or not.

A GENEROUS GIFT was recently made to the town of San Rafael in Marin county, this State, hy Mr. John F. Boyd, the well-known capitalist and mining man, who is the owner of the celehrated Oakwood Park Stock Farm in Contra Costa county. Mr. Boyd has long been a resident of San Rafael and his gift to that heautiful little city is a twenty-acre tract of land valued at $25,000, which he gives for a puhlic park, something that San Rafael has needed for some time. The only condition attached to the gift is that the San Rafael trustees employ a man to look after and keep the park in good condition.

Wichita Officials Expelled.

CHICAGO, Decemher 8.—George R. Ketcham of Toledo was found not guilty of estahlishing a fraudulent record for his trotting stallion Cresceus at the Wichita, Kan. track on Octoher 19, 1903, after a hearing of the case tonight before the hoard of appeals of the American Trotting Association. The hoard declared that the evidence fell short of sufficiency in estahlishing criminal participation in the claimed fraudulent agreement for an illegitimate record so far as Mr Ketcham was concerned

"The story detailed hy Starter Jordan of the Wichita track, who declared to the hoard that Mr. Ketchum had arranged with him to fix the time of Cresceus so that the world's mile record would be hroken," the decision declares, "is not without considerahle corrohoration in the matters of minor detail. We must, however, view the case hefore us wholly from the evidence we have that the chief factor has certainly convicted himself of falsehood, and especially in view of the sweeping and unequivocal denial of direct or indirect participation made hy Mr. Ketcham, we must determine that the evidence fails to estahlish his connection with the fraud and intrigue lying at the foundation of this attempted record."

While freeing Mr. Ketcham from the charge, the hoard found the officials of the Southern Kansas Fair Association, on whose track the race was trotted, guilty of connivance to estahlish a fraudulent record, and expelled from the American Trotting Association President C. H. Irwin and all the other officials connected with the Wichita track at that time.

The persons expelled hy the hoard hesides Mr. Irwin were S. B. Amidon, judge; A. C. Jordan, Fred Stearnes and H. T. Eames, all of whom were found hy the hoard to have participated in the announcement and estahlishment of the fraudulent record of the horse Cresceus. The expulsion of these officials also means that the world's record for trotting stallions of 1:59¾, claimed to have heen made by Cresceus, is not allowed hy the hoard. In the decision on the case the hoard says in part:

"Leaving out of consideration entirely the last affidavit made hy Mr. Jordan, detailing what he now claims to he the truth of the entire transaction, so far at least as the statements made therein affect any person other than himself, and relying alone on the condtradictory statements under oath made hy Messrs Amidon, Stearnes, Jordan, Eames and Irwin, not only as to the time made and the details of the performance, hut also and particularly as to the manifest effort shown to estahlish what must have heen known hy Messrs. Irwin and Amidon as an absolutely irregular and unlawful meeting for the record purpose, we are forced to the unavoidahle conclusion that each of the persons named has within hut a little more than a year made ahsolutely irreconcilable and contradictory statements of the facts necessary to the regularity of the meeting, and even the approximate correctness of the time made From the several affidavits the conclusion is irresistihle that not only was the meeting irregular, hut the attempt to give the horse such a record was a gross fraud upon the puhlic and a willful violation of the rules of the American Trotting Association.

"All controversy over the regularity of the performance and the correctness of the time claimed is forever set at rest hy Mr. Ketcham's authorized statement, through his attorney, made today hefore the hoard, in which he equivocally states that he is satisfied from the evidence hefore the hoard that the horse Cresceus did not make the mile in 1:59¾ at Wichita, Kan., Octoher 19, 1903, and that he is not entitled to the credit for the performance of any record arising therefrom; that the announcement of such time then and there made was fraudulently done and was false; that Cresceus is not entitled to the record, and Mr. Ketcham does not want it under existing circumstances."

A New Training Ground.

Plans are taking shape for the construction of a mile race track with a two-mile straightaway adjunct course at Redwood City. It hecame known last week that the recent honding of the Horace Hawes tract of land, consisting of 460 acres, hy Will L. Ashe in Redwood City is the preliminary step toward creating a training place for the horses of wealthy men, where the owners of fancy stock can huild their own stables adjacent to the track, in which they will have a joint interest.

Ashe states that the plans for the track are already under way and include, heside the race track and the two-mile course, a two-mile track for the use of automohilists, a lake for swimming, hoating and fishing, and the construction of a clubhouse and cottages for the use of those who desire to make their homes there during the summer months, or to spend Saturdays and Sundays there while enjoying the sport that is expected to he provided. It was also learned that a proposition has heen suhmitted to the management of the Palace Hotel to erect a resort on the tract convenient to the racing courses and the lake, where guests of the local hostelry may visit during their stay in San Francisco.

P. H. McEvoy of Menlo Park is offering two handsome Prince Airlie stallions for sale—Milbrae (trotting record 2:16½) and Menlo Boy 3741. For particulars see advertisement. *tf

Dr. Neal's Impressions of Sidney Dillon.

Dr. J. W. Neal, editor of the *Western Horseman*, puhlished at Indianapolis, went to New York at the request of Hon. Sterling R. Holt and purchased Sidney Dillon. The following is an account of the purchase and his impressions of the stallion taken from the last issue of his popular journal:

"Sidney Dillon, the Kohinoor of the speed sire offering, and, for that matter, of the speed sires of the age in which we live, sire of the peerless trotting queen, Lou Dillon 1:58½, Dolly Dillon 2:06¾ and Stanley Dillon 2:07¾, hy all odds the greatest trio of trotters ever to the credit of any speed sire, young or old, was the hargain of the sale, the price he hrought, $9000, heing a shock to his sellers douhtless never hefore received hy any seller of a great horse. I went to the sale hearing a commission from Hon. Sterling R. Holt, proprietor of Maywood Stock Farm, this city, whose husiness engagements at home prevented his attending the sale, to huy the king of extreme speed sires if I found the horse right and the price in reach, hut I freely confess that I had little hope of securing the grand prize of the offering. I knew that he was worth more money than I had the nerve to pay, especially with another man's money, yet my great desire to have him land where he could do the most good—in the Middle West, in Indiana—stimulated the hope in me that the sudden notion to go around the corner to 'see a man' might account for the absence of some of the 'fat purse' fellows at the critical moment. Something happened, or didn't happen, and the short line with the small hut ready hait landed the hig game. Very soon after Sidney Dillon was 'knocked off' some fellow remarked: 'Say, they just stole him!' Another said, 'No, it's more Indiana luck,' hut a third quickly added: 'You are wrong, too. It is Indiana pluck and perpetual readiness!' Anyway, Sidney Dillon was soon on his way to Indiana, where he landed, fresh as a rose, Friday afternoon."

Sidney Dillon is clearly the most remarkahle horse with which I have ever had any acquaintance. I say "acquaintance" hecause no other word will do quite so well, for no cultured gentleman, nor lady, hears "acquaintance" hetter. I have never seen a hetter mannered horse, nor one with so much sense and character. I came home on the same train with him, and so companionahle did I find him that without realizing it I rode in the express car with him most all night, never once thinking of the herth for which I had paid up in a Pullman. We had led him from the Garden to the express station, some thirty blocks, through the hustle and hustle of a great city, with a light halter, and not once did he fail to pick his way as carefully, coolly and courageously as any man. Leading him, surrounded hy everything confusing and frightful to practically all horses, was hut the task of leading the average horse into his home box. Turned loose in his car he rode like a "first class" passenger, and "with his eyes" and manners seemed ever ready for a neighhorly conversation. To go close to him meant that his demonstrations of affection would he lavished upon you in ways truly human. I have often seen sensihle and affectionate horses, hut not one like Sidney Dillon. Arriving at Indianapolis, he was unloaded right in the Union Station, where, on nearly a dozen tracks, trains and engines were passing and repassing, puffing and screeching, hut to the end of a halter he carefully and courageously worked out his way hetween and around them, as though he felt responsihle for the safety of the attendant at his rein. It is no exaggeration to say that Sidney Dillon is as remarkahle in his physical and mental makeup as he is as an extreme trotting speed sire. He is an extraordinary horse individually, heing a very rich golden chestnut, full and powerfully made, has great quality and wonderful density of texture, hoth of flesh and hone. It is a mistaken idea that he is a small horse, for no small horse weighs eleven hundred pounds after days of shipping ahout, and that is exactly what he weighed a few hours after landing in Indianapolis. Superintendent Frank Turner, of Santa Rosa Farm, assured me that the stallion's normal weight for some years has heen just 1150 pounds, and I am sure this does not mean a "small horse." Sidney Dillon has the "pacing walk," hut in harness is a pure-gaited, naturally fast trotter. Superintendent Turner tells me that he was worked some for speed in his four and five-year old forms, and that he trotted a mile in 2:21¼, the last quarter in 32¼ seconds.

D L. Crane of Los Angeles has recently heen appointed instructor in horse shoeing and hlacksmithing at the Whittier State School. Mr. Crane has heen an occasional contrihutor to the columns of the BREEDER AND SPORTSMAN for several years, and has sent u many interesting letters pertaining to harness horse matters in the southern part of the State.

Jackson's Napa Soda does not tangle the feet.

JOTTINGS.

STRANGE TO RELATE, some of the editors of agricultural pap rs in different parts of the country have indulged during the past week in a lot of misplaced sympathy for the harness horse breeders of the United States. In nearly every instance these editors have taken their cue from the first day of the Old Glory sale at New York and some have gone so far as to say that the sale proved "a withering frost." The utter absurdity of this statement will be realized when it is stated that the aggregate sum of the sales just closed is the largest for four years, and that it has been beaten but once since 1896 and that was in 1901, when the great breeding establishments of Marcus Daly and William E. Spiers were dispersed on account of the death of the owners. As proof of this statement the figures of the Old Glory sales since 1898 are here given:

1899, 810 head	$315,110
1900, 702 head	352,180
1901, 920 head	499,355
1902, 949 head	382,165
1903, 944 head	333,940
1904, 987 head	447,775

There is no other breed of animals that could be disposed of in such numbers and at such figures. A general sale of thoroughbred horses from all parts of the country would not begin to realize such a sum or such an average for 987 head as was received at the Old Glory sale of 1904. On the last day of the sale consignments were mostly from small breeding farms and by sires that have little or no reputation, and thus brought the average down. Otherwise it would have been nearly $600 per head, a very large figure for any sale. After the sale a number of buyers refused profits that were offered. Among them were D. S. McDonald who purchased Jack Axworthy for $3300 and refused $5000 for him soon after. Edward Rice bought John M. for $4400 and declined a cash offer of $7000 and another of $7500 the very next day. On the opening day prices were low and it seems that the newspaper writers who do not keep posted on the trotting horse market, and who probably thought the Old Glory only lasted one day, imagined that trotting horse values were gone to the dogs. The fact is that there has never been a time when harness horses had a better value than at the present time. There is no boom in trotting or pacing horses, and sales are made on a basis of actual instead of speculative or boom values. Earning capacity on the track or in the stud are the basis on which prices are fixed, and that these prices average about $500 for a thousand head is pretty conclusive evidence that the harness horse breeders are not in want of sympathy.

Now that Mr. Billings owns Major Delmar, there will be no further discussion as to which trotter holds the champion record. Lou Dillon's wind shield record of 1:58½ was never approached by Major Delmar nearer than a second and a quarter, but there was considerable fuss kicked up over her mile in 2:01 without the wind shield, two outside timers claiming that she did not trot that fast. However, now that both horses are owned by one man, and he one of the most honorable of sportsmen, the public will be able to tell which is the greater of the two when they have had a few races together. It is said to be Mr. Billings' intention to trot them in a series of races and while the same interest cannot be aroused as would result if they were owned by different parties, still the question of the relative speed of each will be more accurately determined under Mr Billings' management of both, as he will not start them unless both are in condition to make their very best effort. It is quite a distinction as well as a great honor to own the champion trotter of the world, but when the same person owns the only other trotter that has shown speed enough to be looked upon as an actual rival, his cup of satisfaction must be pretty nearly filled.

Sam Freeman, who writes so entertainingly every week for the *Trotter and Pacer*, tells the following story about the sale of Monte Carlo 2:07¼, after that horse had passed through the auction ring of the Old Glory. "One of the most important of the private sales was the transfer of the trotter Monte Carlo, which Samuel McMillan bought in the auction for William Bradbury, the New York contractor, to F. H. Kump, a wealthy retired brewer of Kansas City, Mo, through Dick Benson, the well-known trainer. Mr. Kump made the journey from Missouri to the sale for the express purpose of buying the fast mare Nora McKinney, which William Simpson got for $11,000 and bid up to $10,600 for her, dropping out only for the fact that he did not have enough currency with him; otherwise, it is said, he would have gone to $15,000 for [illegible] account of waiting for the mare, he did not bid on Monte Carlo, but as soon as Nora was knocked down to Mr. Simpson he requested Mr. Benson to go to Mr. Bradley and see what he would take for the great gelding. Mr. Bradley said he did not care to sell Monte, but the lowest figure be would consider was $8000. 'The horse is mine,' replied Mr. Benson, and the exchange was quickly sealed. Mr. Bradley had already made arrangements to send Monte to Alta McDonald to train and Alta was considerably disappointed in not getting the horse, as be thinks with great reason that he could have done mighty well with him in his class next season. He went to Kump and Mr. Benson afterward, and expressing his disappointment at the turn affairs bad taken, offered $10,000 for the fast son of Mendocino, which was refused. Mr. Kump, who is an enthusiastic road driver, will use Monte exclusively for the road. He will not even start him in the matinees, as he is at present the only fast one owned by Mr. Kump, who has owned and driven many good ones in his day. He paid J. I. Case $6500 for the mare Bronze back in 1880–81, and $8500 for Lillian at the same time. The former had defeated the famous Jay-Eye-See, and was considered one of the fastest in the country at that time. He will now be able to trim anything on the road with Monte Carlo."

Old Glory Sale.

That a thousand horses were sold at the Old Glory sale in nine days at an average of $500 per head is pretty good evidence that the trotting bred horse is in active demand. Two or three stallions were sold at ridiculously low figures, but taken as a whole the sale was a big success. The report of the sales of the first four days appeared in these columns last week and this week we give the results of the sales during the remaining five days, that have the most interest to the Pacific Coast readers:

Little Jay (2:15 matinee record) b g (5) by Leonatus–Cheroot by Jay Gould; A. T. Essery, New York City; $1500.

Adrexa, b m (6) by Advertiser–Dextress by Dexter Prince; D. G. McDonald, Pittsburg, Penn.; $320.

The Barbarian, b g (7) by Athanio–Pansy by Almont; A. J Furhusb, Boston, Mass.; $325.

Bush 2:09½, blk m (18) by Alcyone–Lady Garfield by Young Jupiter; Charles Birch, Capoke, N. Y.; $350.

Narida, b m (12) by Palo Alto–Loulaneer by Electioneer; Phipps Montgomery, New Haven, Conn.; $360.

Joe Watts 2:10¾, ch g (10) by Electioneer–May Neale by Vatican; A. J. Furhush, Bosson, Mass.; $510.

Star Pugh 2:09½, ch g (8) by Tom Pugh–Maggie Casey by Charles Casey; C. S. Rice, New York City; $460.

Alabama Coon 2:09¾, b g (10) by Orphan Boy–Lula Mack by Johnny Mack; E. Denault, Providence, R. I.; $385.

Pedlar 2:18½, b h (17) by Electioneer–Penelope by Mohawk Chief; Joseph Keiser, New York City; $335.

Locanda 2:03¾ b b (7) by Allerton–Kathrina by Alcyone; W. J. Snyder, New York City; $5300.

Roy B 2:09¼, b g (9) by Ham Nut–mare said to be by Tom Hal; F. R. Bain, Poughkeepsie, N. Y.; $1250.

Enid W., br m (6) by Wildnut–Ladywell by Electioneer; Jesse Elder, Utica, N. Y.; $335.

Larabie Bel 2:22, br m (5) by Larabie the Great–Adebel by Advertiser; Leopold Meyer, Newark, N. J.; $585.

Ed Winter 2:12¾, b h (9) by Jay Bird–Lady Ham by Hambrino; William Bradley, New York City; $2100.

Wallace McKinney, b c (yearling) by McKinney–Leonor by Dashwood; C. W. Marks, Washington Court House, Ohio; $1550.

Leonor 2:24, b m (20) by Dashwood–Durferine by Echo; Ramapo Stock Farm, Spring Valley, N. Y.; $750.

Cheery McKinney, br c (weanling) by McKinney–Charming Bunker by Bobby McGregor; D. W. Maloney, White Plains, N. Y.; $900.

Henry Winters, b c by Ed Winters–Charming Bunker by Bobby McGregor; Johnson Brothers, London, Ont.; $1275.

Charming Bunker, b m (6) by Bobby McGregor–Welcome Bunker by Mambrino; William Simpson, New York City; $2000.

Belle McKinney, b f (weanling) by McKinney–Bell Red by Red Wilkes; W. B. Dickerson, New York City; $1000.

Red Belle 2:19¼, b m (13) by Red Wilkes–Emma G. by Elmont; D C. McDonald, Pittsburg, Penn.; $1000.

Henry McKinney, b c (yearling) by McKinney–Miss Fantastic by Electric Bell; J. H. Supplee, Rosemont, Penn.; $1825.

Anita McKinney, b f (weanling) by McKinney–Anita by Baron Wilkes; H. B. Crawford, Montclair, N. J.; $550.

Norval McKinney, b c (weanling) by McKinley–Norvena by Norval; J. L. Rockfelt, Washington Court House, Ohio; $700.

Lola McKinney, b f (yearling) by McKinney–Our Lady by Nearest; J. H. Supplee, Rosemont, Penn.; $825.

Advarian, br m (6) by Advertiser–Clarion by Ansel; J. H. Shults, New York City; $400.

Odette, blk m (5) by Advertiser–Manette by Nutwood; A. L. Thomas, Benson, Neb.; $550.

Azote's Races in 1894 and 1895.

ROCKLIN, CAL., Dec. 1, 1904.

MR. EDITOR—In your issue of December 10th, please give number of races trotted by Azote in 1894, number won and where he finished in number lost, and gross winnings. Also same for 1895.

SUBSCRIBER.

According to the Year Book Azote started seventeen times in 1894, and his positions in the summaries, together with his gross winnings in each race were as follows: At Saginaw, 6–1–1–1, $400; Detroit, 1–1–1, $1000; Cleveland, 1–1–1, $1000; Buffalo, 1–1–1, $2500; 1–1–1, $1000; Terre Haute, 1–2–2–1–2, second money, $625; 3–2–4–5, third money, $750; Terre Haute, fall meeting, 2–1–1–1, $750; Chillicothe, 1–1–1, $1000, Galesburg, 2–4–3, third money, $150; Lexington, 1–1–1, $2500; Nashville, 2–2–3, second money, $750; Philadelphia, 1–1–1, $750; Louisville 3–3–2, second money, $250. Total for fourteen actual races, $13,425. Azote also started twice that year with Answer in double team races, winning one in which the purse was $135, and losing the other in which the purse is not given in the Year Book. He also started in a free-for-all at Los Angeles against Klamath and Nightingale and won, but the amount of the purse is not given.

In 1895 the Year Book credits him with twelve starts, as follows: La Crosse, 1–1–1, $500; Cleveland, 1–1–1, $1500; Richmond, Ky., 1–1–1, $500; Rochester, 1–1–1, $500: New York, 1–1–1, $2500; St. Joseph, 1–1–1, $750. Total in six races, $6250. Azote also started three times against time. At Galesburg he started to beat 2:05½ and won, getting his record of 2:04¾. At Springfield he started to beat 2:03¾ but 2:07½ was the best he could do. At Omaha he started against his record but lost, the mile being in 2:05¾. He also trotted a match with Fantasy and won, but the Year Book does not give the size of the stake, and he also started in two hippodrome performances at Sacramento and Fresno, no purse being mentioned in the Year Book account.

News From the North.

[Portland Rural Spirit.]

The fastest two-year old filly out this year was bred and raised in Oregon.

N. K. Wast has bought the full brother to Satin Royal 2:19¼, a year younger, from Charles Cleveland.

Sam Casto is holding the fort at Lone Oak track this winter with a good string of well-bred youngsters, mostly Zombro's.

John Sawyer says he has a sure-enough Lou Dillon in his two-year-old filly by Zombro 2:11 out of Mary A 2:30 by Altamont.

H. H. Helman, the most successful trainer and driver on the Northwest Circuit, is located at Irvington track.

Miss D. B. Howard won the Kerr cup on Jim Budd in a cross-country ride last Thursday, given by the Portland Hunt Club. This is the second timo she has won this trophy, which, under the rule, makes it her own.

J. A. Jones, who bred and raised the two-year-old filly Bellemont 2:20½ by Zombro out of Daisy Q. Hill, has a yearling out of the same mare by Captain Jones that he considers a much better colt than Bellemont, the fastest trotting filly out this year.

One of the best things in Senator Helman's stable this winter is the McKinney mare Zipsey, that trotted miles in 2:20 this year with but little work. She was not started because her owner did not wish to mark her.

John Pender, the veteran horseman has moved to Portland from the State Fair grounds, bringing with him the good three-year-old trotter Crelya Jones and the yearling Vernon Jones, both by his favorite of all stallions, Captain Jones. He also had the broodmare Anigitta 2:21 (pacing) that is due to foal in the spring to Lecco 2:09¾.

Wylie A. Moores, secretary of the Oregon State Fair, was down from Salem this week and reports the hot-air circuit in the capital city is opening up to big crowds. Wylie is making a race for city recorder. It is a two-in-three event. He won the first heat in a jog, and he expects to distance all competitors next Monday in the final race.

Now that weanling colts are being cared for in the stable it is quite easy to handle them a little every day. Five minutes is sufficient to get them accustomed to this attention. If each foot is picked up gently the colt will soon become accustomed to such attentions and his education for the harness will be materially advanced thereby. Colts handled in this way take to the harness or saddle very kindly.

Notes and News.

Better get an advertisement in our Christmas number if you want everybody to see it.

Monte Carlo 2:07¼, which sold under the hammer at $4500, was later sold to a Kansas City gentleman at an advance of $2500.

Horses to the number of 31,650 and valued at $2,308,-383, were exported from this country to Europe during the first eight months of 1904.

Diablo 2:09¼ will make the season of 1905 at Woodland in charge of C. D. Crookham. The fee will be $40 for the season with $60 to insure a foal.

A. L. Thomas has sold Alta Axworthy 2:10½ to Walter Winans, of Brighton, England, for $13,000, and the American turf loses one of its brightest stars.

$5000 was the price paid last month to Mr. J. C. Adams of Phoenix, Arizona, by Mr. William Simpson of New York for Lady Rivers, the dam of Sweet Marie.

Ashland Wilkes 2:17¼ has passed the century mark as a sire of 2:30 performers, having 101 standard performers to his credit, of which eight have records of 2:10 or better.

Contralto 2:10 recently won a rich purse for trotters at Rovigo, Italy, beating Hornelia Wilkes 2:16¼, B. B. P 2:09¾, Maggie Mills 2:16¼ and Henrietta 2:12¼ in 2:16¼ and 2:15.

Associations that will give meetings in California next season should claim their dates now. Nothing is lost by claiming dates, as it shows that the association claiming them must be reckoned with.

The McKinneys topped the Old Glory sale for best average. Fourteen sons and daughters of that stallion went throub the ring and brought a total of $23,010 an average of $1643.60 per head.

William Simpson, the new owner of McKinney is advertising him extensively, which is the proper thing to do. Mr. Simpson knows that advertising pays. He will probably have to turn mares away even at $300.

Lou Dillon will reach San Jose to-day or to-morrow. She will be glad to get hack to her native heath, the land of sunshine, fruit and flowers. Budd Doble has a stall fixed up in elegant shape for her during her stay in California.

Third payment of $25 each is due on entries made in the Occident Stake of 1905 which is to be trotted next year. We advise every person having an entry in this stake to make this payment if his colt is alive and well at the time.

One of the roan leaders of Mrs. J. B. M. Grosvenor's blue ribbon four-in-hand, that won at the New York Horse Show, is the well known trotter Altoka 2:16½ by Allerton 2:09¼. This horse was a prominent winner in the Grand Circuit.

Among other purchases made by M. W. Savage at the New York sale was the veteran pacing mare, Effie Powers 2:08¼ and Twinkle 2:25¼ (dam of Gordon Prince 2:05½), both of which will undoubtedly be mated with Dan Patch 1:56.

The successful Ohio sire Elyria 2:25¼ died of heart disease at P. O. Shank's farm, Litchfield, O., last week, at the age of twenty-five years. Elyria is credited with eighty-one performers, most of which took their records over the Ohio half-mile tracks.

The Kentucky Trotting Horse Breeders' Association's track at Lexington has been plowed up to the depth of six inches, and will be allowed to remain in that condition till next spring, when it will he harrowed and rolled till it is in the best condition possible.

An effort is being made by Montana breeders to induce the associations holding meetings in that State to offer stakes for three-year-old trotters. Nothing creates an interest in hreeding like colt stakes, and hey invariably lead to improvement in horse values.

Geo. W. Archer, the Allerton stallion that Hon. Peter Breen of Butte, Montana, purchased from W. E. Shoo of Oakland, two years ago, is being well patronized by Montana breeders and will have a list of 2:30 performers as soon as the youngsters are old enough to train.

California stallion owners should send us the names of all new performers of 1904 hy their horses for the new 2:30 list which will appear in our Christmas issue. The list will be made as complete as possible, but owners can help materially as they generally keep track of the get of their stallions.

The champion three-year-old of the season of 1904 on the Austrian trotting turf was Benedict, son of Wilburn M., who won 40,750 bronen, or over $10,000. His best record was at the rate of 1:28 4-5 per kilometer, or about 2:22 per mile. His sire, Wilburn M., is by Wilton 2:19¼ out of Rose Leyburn 2:15¼, pacing, hy Onward 2:25¼, and had an American record of 2:27, hut trotted in 2:10¼ in Austria. Benedict's dam is the American-bred Tilly Brown by Banker, son of Rysdyk's Hambletonian.

Owing to the death of Mr. George L. Warlow's foal hy Athablo out of Lady Harding, entered in Breeders Futurity No. 4, he has transferred his nomination to Mr. W. H. Graham of Reedly who has substituted the hay filly Dooksie McMillian by Athahlo, dam Lectie by Eclectic, grandam by Dexter Prince.

George Spear, trainer for E. E. Smathers, re-purchased the chestnut pacer Sphinx S. 2:05¼, at an advance of $100 after the horse had heen struck off for $1600 to Herman Jacobs at the Garden sale last week. It is said that Mr. Smathers has won $40,000 in pools on Sphnix S. in the last three years.

J. B. Nightingale of Cordelia has purchased M. L. Lusk's nomination of his mare Melrose (who failed to have a foal) in Futurity No. 4, and has substituted the hay or brown filly sired by Polestar, son of McKinney and Mountain Hare, dam Lady Bird by Winwood, second dam Mollie Webster by Capt. Webster.

Sterling R. Holt, Maywood Farm, Indianapolis, purchased the famous hroodmare, Earalma (dam of Boralma 2:07; Pan Michael 2:05, etc.), by Earl 2474; dam Amal by Clay 4770, for $1850 at the Old Glory sale and she will join the great band of broodmares at Maywood Farm, where she will be bred to Sidney Dillon

A long-bearded braggart was boasting in the Madison Square Garden of his prowess as a "bronco huster" when one of the grooms broke in with: "Why we've got cab horses here in New York that would throw a guy like you so high that the birds would build nests in your whiskers before you came down."

The Canadian champion pacer, Gallagher 2:03½, got mixed in a railroad wreck a few days ago within a few miles of Hamilton, Ont., and was lucky to escape without serious injury as his car was reduced to kindling wood and his caretaker was badly injured. A few cuts and bruises were the extent of the fast sidewheeler's injuries.

The Occident Stake of 1907 is advertised to close January 1st. This is one of the richest stakes on the Coast and should have a large entry list. The affairs of the association will be in better shape than ever after the Legislature straightens out its affairs. The money paid in on the stake will he placed in a special fund to be used for no other purpose.

The Phoenix, Arizona, Driving Club will give a horse show in connection with the holiday races which are to be held December 29th, 30th and 31st. Prizes will be offered for all classes of horses, and a good big entry list is assured. The following gentlemen are named as a committee to classify the exhibits: H. I. Latham, V. L. Clark, Walter Bennett, Walter Talbot; Henry George, G. W. Benton and Ezra W. Thayer.

After securing Monte Carlo 2:07¼ for $4500 at the New York sale, William Bradley of New York resold the fast gelding to F. H. Klump of Kansas City, Mo., for $8000. Another animal to be resold at a profit was Billy Buch 2:07¼, the largest money winner on the Grand Circuit in 1903. He was knocked down for $1075 and sold at an advance to Dave G. McDonald of Pittsburg, and will be seen at the matinees next season.

The Professional Drivers' Beneficial Association of America held their annual meeting at the Cadillac Hotel, New York City, on Friday, Nov. 25. The annual election resulted as follows: President, Harry W. Davis, Camden, N. J.; Vice-President, Scott Hudson, Lexington, Ky.; Second Vice-President, Dr. Geo. H. Bailey, Portland, Me.; Secretary, J. B. Miller, Camden, N. J. Fifteen directors, including the most prominent horsemen of the country, were chosen.

Grace Bond 2:09¼, (3) is still the property of her old owners, although passing through the sale for $13,000. Mr. William Simpson, the owner of McKinney 2:11¼, went up to $12,500 on the filly. Mr. Simpson hought several McKinneys and should have an excellent stable another season. Nora McKinney went to Mr. Simpson for $11,000, rather more than was expected, hut not beyond the mare's earning capacity. Trainer W. J. Andrews considers her a prospective champion.

Arthur J. Caton, of Chicago, who a few years ago conducted one of America's most noted stock farms at Caton Farm, Joliet, Ill, where many great trotters were hred, died very suddenly at the Waldorf-Astoria hotel in New York, November 18th, from an affection of the heart hrought on by liver trouble, from which he has been a sufferer for several years. At the time of his death, Mr. Caton and his wife were on a visit to the metropolis, where they went to attend the National Horse Show.

It is seldom that a colt which stands at the head of his class as a three-year-old succeeds in gaining and keeping that position as a four-year-old. D. C. Palmeter's good colt Barongale proved equal to the task, however. He closed the season of 1903 with a trotting record of 2:15¼, which was the fastest record made by any trotting colt that season. This year he has reduced his record to 2:11¼ in a race that he won which was a faster heat than any other four-year-old stallion has won the past season.

John W. Springer, ex-president of the National Live Stock Association, is at the head of a project to establish near Denver what is believed to he the largest colony in America for the breeding of fine horses. Each breeder will be a specialist in his line. The colony will include nearly 10,000 acres of land, and within the boundaries will be raised American coach horses, Belgian heavy draft horses, heavy harness cobs, thoroughbred Kentucky saddlers and trotters. Speaking of the scheme, Springer said: "I believe hetter horses can be raised in Colorado and cheaper than anywhere else in America."

"Richard F. Carmen of Long Island, N. Y., has wagered that one of his imported hackneys is capable of trotting forty miles in four and one-half hours."—*Chicago Horseman.* There are horses in every livery stable in California whose owners will wager dollars to apples that they can trot forty miles in four hours and a half and pull a road wagon with two men in it.

Allentown, Pa., has one of the best half-mile tracks in the world and always obtains the hest attractions in the racing way to serve up to its fair-going patrons. Here are some figures which are vouched for as correct concerning the hnsiness of this fair: Total receipts at fair of 1904, $42,727 93; net profit for season, $20,000; total assets of fair association, including stocks, bonds, real estates and so on, $250,000; total cash surplus, $30,000. The society has no dehts of any kind, is not by law allowed to declare any dividends or give any thing away to its members, and the question now before the directors is what shall be done with the assets and cash on hand?

Mr. Henry B. Gentry, the well known horseman and former owner of McKinney 2:11½, fell through a hay wagon frame at his farm, south of Bloomington, Ind., week hefore last, hreaking both bones of one of his legs below the knee. He was directing the work of getting a shipment of horses to the Fasig-Tipton sale in New York at the time the accident happened. He was removed to his home in Bloomington, and reports from his bedside this week say that he is resting easily and doing as well as could he expected under the circumstances. He had just completed arrangements to spend the winter in California. His many friends and acquaintances in the trotting world will wish him a speedy recovery.—*Western Horseman.*

Mr. J. W. Zibbell has just completed the erection of a new huilding on 11th avenue, this city, just north of the Chutes, and only about two hlocks from one of the main entrances to Golden Gate Park. Mr. Zibbell will have room for over twenty horses and will take horses to train for the road or track. His son, Willard Zibbell, is associated with him and they will use the park roads and speedway for driving on. As soon as the winter is over either Mr. Zibbell or his son will take the horses that will be raced to some one of the training tracks, but the 11th Avenue Stables will be kept open as usual. The Zibbells are good trainers and good caretakers and their new location is one of the most convenient in San Francisco for owners who desire to see their horses often.

There are many things beside pleasure in the experience of a State Fair Director. A default judgment in favor of the California State Bank and against six defendants who were Directors of the State Agricultural Society was entered by Judge Hughes in the Superior Court of Sacramento county last week. The Court finds that there is due and unpaid upon a promissory note of the defendants the sum of $7927.65 and that the plaintiff recover from the defendants, A. B. Spreckels, J. W. Wilson, A. W. Barrett, Frederick Cox, F. W. Covey and Grove L. Johnson, the sum for which judgment is entered. The note, it is understood, was advanced by the defendants to carry on the affairs of the society, with the expectation that they would be reimhursed by the State appropriation.

The breeding of army horses in old Mexico will be undertaken in the State of Colima by Dr. A. J. Oscher, of the Paso Del Rio Industrial Co. For this purpose he has bought of A. W. Hawley, of Iowa, the Black Squirrel stallion Squirrel 1449, which is one of the best bred horses in the American Saddle Horse Register, coming on the dam's side from the Peavine strain, which has allied itself most kindly with the hlood of that great sire, Black Squirrel Squirrel is a hay horse, now about eight years old, and his use on well-selected Mexican mares will douhtless go far to prove the validity of the contention that the American saddle horse is by odds the best sire to use in the production of remounts. It is well known that the Government price for remounts is not sufficiently high to warrant specific effort at their production on valuable land and with high-priced mares, but conditions in Mexico should favor such an enterprise, and the blood of the two Kentucky strains united in Squirrel should certainly give satisfactory results.

Hi Hogohoom has a string of seven horses at Woodland that has as much class as any string of equal numher in the State, and all are in good shape. The string is headed hy that fast trotter and good sire, Iran Alto 2:12¼, register numher 24,586, son of the great racehorse Palo Alto 2:08¾ and the great broodmare Elaine 2:20, dam of Norlaine, that held the world's yearling championship, Palatine 2:28, Altoaine 2:29½ and Anselma 2:29¼. Elaine is also the dam of Elsie, the great broodmare that has produced five in the list. The second dam of Palo Alto is the famous hroodmare, Green Mountain Maid, that produced Electioneer and nine standard trotters. Iran Alto will make the season of 1905 at Woodland. Mr. Hogoboom also has a half-dozen young trotters he is just beginning work on. The colt Palo King is a fine looker. He is by the McKinney horse Marengo King and out of a mare by Palo Alto. Two good-looking fillies by Nutwood Wilkes are Miss Expressive, whose dam is the mare Expressive 2:12½ hy Electioneer, one of the greatest three-year olds that ever raced on the Grand Circuit. Miss Expressive is a grand looking filly with plenty of bone and suhstance, and is showing trot although she is only just hridle wise. The other filly is out of Liska, dam of Lisonjero 2:08¼ and two or three more with fast records. Both these fillies are owned hy Mr. Henry Cowell of this city. The colt by L. W. Russell out of the great broodmare Elsie, dam of five in the list, is a big, strong looking yearling and Hi says he is a sure trotter. The stallion Arthur W. 2:11½ is also in Mr. Hogoboom's charge, and will be well patronized by Yolo county breeders. His get are large and fine lookers and have lots of natural speed.

If You Can't Boost- -Don't Knock.

That the trotting game needs more than any other one thing just at present is boosting. To one familiar with the knocks it has been receiving for the past four years its survival proves conclusively that it is a very great sport indeed.

The efficiency of the knock depends largely upon its source and here we are confronted with the strange truth that the men who owe the business their daily bread are the most diligent in trying to tear it down. During the latter part of the racing season about 30 per cent of the drivers declared loud, long and strenuously that the game was of no account and that it was their last season with the trotters, a great fortune and a glorious future awaited them as trainers of thoroughbreds. No one can deny them the right to quit the trotters if they so desire—but they don't quit. The same men are always quitting, but spring always finds them in the sulky again. If they would cease knocking and spend a fraction of their time in boosting they and all others connected with harness racing would receive material benefit therefrom.

Men with many thousands of dollars invested in business enterprises scarcely get as much out of life as the average Grand Circuit trainer. The latter often live like millionaires, stopping at the best hotels, and disregarding expenses in the matter of luxuries of all kinds. Any class of people in a business without profit would take steps to retrench along such lines, so the best proof that the trainers make a reasonable profit from their profession is the fact that they do and will live high year after year.

I started out to say that harness racing must be a very great sport to stand the knocking it has received and is daily receiving. A whispered rumor is sufficient to cause a run on the bank; one unsettled loss has been known to put an insurance company out of business; a few bad shows have put theaters into the second class, but with a large per cent of the men who receive the most benefit from it, working beneath its foundation with pick and shovel, armed with giant powder and time fuse, the harness sport continues to get along despite it all.

There was never a time when a really high class trotter or pacer was worth more than at the present. And there will always be a reasonable profit for the men who raise them and the men who develop them. If the knockers would carry out their oft-repeated threats to join the runners the game would somehow manage to get along, and what was left of it would be surrounded by a pure air of content such as it has not known these many years. A poor or indifferent trainer of trotters is not likely to make a successful running horse trainer It takes skill, brains and persistence to succeed there as elsewhere, and as the knockers usually carry the "Indian Sign" of failure they are likely to play their same parts until the end of the last chapter.

The incentive which prompts the majority of men who own campaigning horses is one of pleasure rather than profit. Horse racing of any sort is or should be a sport, rather than a business. We hear the fabulous tales of wealth acquired by this or that man on the running turf and of the enormous winnings of this or that particular stable, but cold figures, based on the expensive establishment back of such stables, prove conclusively that the profits are an iridescent dream. It is claimed that the late W. C. Whitney's thoroughbred interests cost $500,000 annually over and above the profits made from his breeding and racing stable. A few men have made great fortunes on the racing turf, but they belong to the "Plunger" element, of whom it is so justly said, "the money is only loaned," for in the end it all goes back to its original sources.

Being a sport and a means of pleasure we should try to entertain rather than disgust the devotees of harness racing. No man is more unwelcome and disagreeable than he who at every opportunity bores us with his rheumatics or dyspepsia. We hate to see him coming, we dodge him if we can, and we are always glad to see him leave. The rheumatics and dyspepties of the harness turf are its knockers—though their classification as such may be an unpleasant truth.—"*Marque*" *in Horse Review.*

At the annual meeting of the League of Amateur Driving Clubs held in New York on Nov. 22nd, the following list of officers were elected for the ensuing year: President, H. K. Devereux, Cleveland, O.; Vice-President, J. D. Callery, Pittsburg, Pa.; Secretary-Treasurer, T. L. Quimby, Boston, Mass. Directors: H. K. Devereux, Cleveland, O.; J. D. Callery, Pittsburg, Pa.; C. K. G. Billings, Memphis, Tenn.; C. C. Lloyd, New York, N. Y.; Horace White, Syracuse, N. Y.; Elbridge Haneey, Chicago, Ill.; Max Morehouse, Columbus, O.; T. L. Quimby, Boston, Mass. Executive committee: H. H. Devereux, Cleveland, O.; J. D Callery, Pittsburg, Pa.; C. K. G. Billings, Memphis, Tenn.; Horace White, Syracuse, N. Y.; T. L. Quimby, Boston, Mass. A rule was adopted to [illegible] races competing in inter-city matinees by [illegible] record, whether turf or matinee.

The Yankee Horse.

New England put its stamp upon horses, even more than upon men, and it is probably the best place in the world to raise them, writes Henry C Merwin in the October *Outing*. The one thing that it cannot be expected to produce in the equine line is size. Large horses will, of course, be grown now and then in New England, but it is doubtful if any family or breed of large horses could ever be established there. The tendency of the climate, unless counteracted by such warm stabling and blanketing as would impair stamina, is to produce a small, compact animal. Horses yield with astonishing quickness to the influence of climate, soil and treatment. The foals of plains horses, when taken East and stabled grow up much taller than their sires and dams. A horse foaled in Australia, the sire and dam having been imported from England, can be distinguished at a glance from one foaled in England. Moreover, it is easy to reduce the size of horses, because they were originally no bigger than large dogs, and it is only by long continued efforts that their size has been increased. In the seventeenth century a pony fourteen hands high was considered a rather tall horse. In 1868 the legislature of Massachusetts passed an act providing that entire horses under fourteen hands should not be permitted to run at large in pastures or common lands. It is reckoned that the average size of the English thoroughbred has increased a whole hand (four inches) in the last century. The bracing atmosphere, the long, cold winters, the deep snows of northern New England contribute to produce a small, tough, hardy, muscular animal, with an abundance of nervous energy—the Morgan horse. Moreover, the early Morgans shared the privations and labors of a pioneer community. They belonged to poor men who were carving farms out of the primeval forest; and consequently they worked hard, were roughly stabled, and received small grooming or blanketing. These severities tended to make the little horses tough and strong; and, in addition, they were nourished on such hay and grain as only primeval soil will produce. There are no oats like those which sprout among the huge roots and blackened stumps of land but lately cleared; there are no pastures like those mountain slopes upon which the ploughshare has never run. It a question worth considering, whether some part of the strength and fecundity for which the early settlers of New England are noted should not be ascribed to the fact that they drew their sustenance from virgin soil. In a climate like that of Kentucky the Morgans would still have been good horses, but they would have been good in a somewhat different way. They would have been larger, and probably faster at the trot and at the gallop; they might have had longer necks and a general appearance of greater breeding. But they would not have possessed quite the snap, the vim, the dash and style for which they are famous, nor would they have walked so fast or stepped so high.

Dixon Driving Park.

A dispatch from Dixon states that T. C. Horigan of that place has bought over 200 of the 280 shares of the capital stock of the Dixon Driving Park Association. He will gather in the remaining shares at an early date, and disincorporate, and then have absolute control of the park and the race track.

The property consists of twenty-three acres of the choicest land just outside of the town limits, together with one of the fastest and best half-mile race tracks on the Coast, with a fine lot of stalls, grandstand and large pavilion, which is used for picnic and dancing.

The enclosure inside the track will be laid down to alfalfa and a pumping plant will be erected for irrigation.

All the stalls will probably soon be occupied and the Dixon Driving Park will become familiar ground to the horsemen of Solano county and elsewhere.

The track will be kept in shape for training at all seasons of the year, and as there are many trotting horses bred in that section it will doubtless be one of the most popular training tracks in the Sacramento valley. The May Day races, which have been a regular feature at the Dixon track for years will be given on a larger scale than ever.

Andy Welch told a representative of the *American Sportsman* at Memphis that the last meeting at Oakley Park, Cincinnati, was not only a great success from a racing rating, but from a financial standpoint. The gate receipts for the meeting aggregated within $5000 of the largest receipts of any of the Grand Circuit meetings in Cleveland. Mr. Welch says the receipts will be much larger in the future, as the street railroad will run a double track directly to the rear of the grandstand, which will avoid the one-third of mile walk across the infield. Next year the Ohio Stake Race will be increased to $10,000.

The Dam of Jack Axworthy.

Of all the trotters which appeared last summer there was not one better gaited than Jack Axworthy, a two-year-old which stepped to a record of 2:15¼ at the Lexington meeting, in a race where he defeated, with seeming ease, the crack youngster, Bon Voyage, which had just won the two year-old Futurity, and also annexed a stake for trotters of that age at the Cincinnati meeting.

In the male line the pedigree of Jack Axworthy is well known. His sire, Axworthy, which took a record of 2:15¼ at three years, being a son of Axtell 2:12 as a three-year-old, and at that time a world's champion. The dam of Jack Axworthy is My Trinket, and she was by Stamboul 2:07½, and out of Trinket 2:14. Trinket was a remarkable mare. She was the first four-year-old trotter to beat 2:20, her record at that age being 2:19¾. Bred by Major H. C. McDowell, she gave a great deal of fame to her sire, Princeps, a horse which had a good deal of vogue in those days.

When her four-year old work made her famous, Trinket was an attraction on Northern race tracks, and one result of her great mile was the making of a race between her and Maud S., which took place at the old Garfield Park track in Chicago. Trinket was unsteady and was distanced. Then the mare was sold and fell into the hands of John Turner, a horseman of rare ability. He drove Trinket to a record of 2:14, and it was with that mark that she retired from the turf and was put to breeding. She was mated with a number of stallions, but her foal by Stamboul was the only one which had speed worth mentioning. It was called My Trinket, and although not given a record could beat 2:20 and show a much faster rate than that for a short distance. Then My Trinket was bred to Axworthy, and the sensational two-year-old trotter of the season just closed was the result.

In the meantime Trinket, thought to be too old to breed, was sold at auction for a small sum and astonished horsemen by showing that at the age of 22 she had a good part of her old time speed left, as she trotted a mile in 2:20½ at that age. People who saw Jack Axworthy trot in 2:15¼ at Lexington with apparent ease knew they were looking at one of the greatest young trotters ever foaled, but only a few were acquainted with his blood lines and realized that the blood of three world's champion trotters in their day—Axtell, Trinket and Stamboul—flowed in his veins. Jack Axworthy brought $3300 at the Old Glory sale and was purchased by David G. McDonald of Pittsburg, Pa.

Zebrulas for Army Use.

The visitor to the exhibits of German East Africa at the World's Fair were surprised to see in the photographs of military maneuvres taken at the principal cities of the colony, that all the officers and troopers are mounted on striped horses. On reflection one decides that these must be zebras, and is surprised to find that so wild and shy an animal has been successfully reduced to a state of docile subservience to human utilities. Neither supposition, however, is correct; but rather the two are equally true and equally false. The animals in question are "zebrulas," which are a hybird between the horse and the zebra.

The first experiments in the crossing of the horse and the zebra were made about nine years ago. The German army in Africa had suffered great inconvenience from inability to acclimate the horse and mule in that part of the world and secure them from the ravages of the deadly tsetse fly, which had destroyed tens of thousands of mules since the first attempts at the introduction of the latter. The imperial government of Germany then established a breeding station in its African colony. At this station zebrulas are being bred as rapidly as possible, and already they are regularly used in the mountain batteries of the colonial service. They are being introduced, for mounting officers and men, and for draught purpose, in the other branches of the service as fast as they become available in sufficient number.

"The day is coming," says John Splan, the famous reinsman, "when a trotter or pacer will have to stand on a record made in a race against other horses. The constant disputes over the corrections of time made by champion record-breakers has something to do with the waning popularity of such speed exhibitions, and then, again, the public with the turf, as with the stage, are tiring of the one-star programmes. A real contest between two or more great horses is what today draws out the public, and it looks to me like the era of contests against time is nearing an end, and another year or two will witness the passing of the hippodrome sort of sport on the trotting turf."

The racing men ought to try the Hart Apartments this winter; 3 and 4 rooms, private baths, telephone, steam heat, first class. 750 Ellis street. *tf

THOROUGHBREDS.

Theodore Winters will always he one of the most prominent figures in the history of California racing. A great lover of the thoroughhred and one of the hest judges of a horse that ever lived, he is a giant among the Pacific Coast hreeders of thoroughhreds. When he went to Kentucky in 1864 and paid $15,001 for Norfolk he astonished the horse world, hut the deal made many thousands for Mr. Winters, and added much to the value of the thoroughhreds of this coast. Mr. Winters has hred many winners, as many as any man in the husiness out here, and some of his hreeding have heen unheatahle during their careers on the turf. At Fred H. Chase & Co.'s salesyard in this city on Monday evening, Decemher 19th, twelve yearlings, two-yeer-olds and three-year-olds from Mr. Winters' Nevada farm will he sold at auction. There are colts and fillies hy those great stallions El Rio Rey and Rey del Sierras and out of such hroodmares as Nellie Post, Ogzilla, Diahlita, Louise M., Ogalina, Fonsitta, Sylvia and others. These mares are all winners or the dams of winners, and their produce are the ones to huy if you wish to win purses and stakes. Chase & Co. have issued catalogues containing full nedigrees and all particulars ahout this stock and will he pleased to mail them on application. The huyer who gets one of these colts or fillies is just as liahle to get a first-class race horse as he would he if he attended a sale where a thousand were to he offered. There are only twelve of these hut they all look well and have class in hreeding and appearance.

The Tennessee Derhy for 1905 will have a gross value of ahout $12,000, and will he worth $10,000 net to the winner. The Tennessee Oaks will have a gross value of ahout $5000. Declarations on hoth these rich events are due January 2d and those having entries should make a note of this fact. 118 original entries were made in the Derhy of which 25 were declared out May 2d. There were 84 entries in the Oaks and of these 12 declared out on May 2d. Both these stakes will he renewed for 1906, and with the stakes for the 1905 meeting will he announced later in these columns.

Breeders and owners are asked to peruse the advertisement of the Westchester Racing Association, which appears in our columns, and in which the stakes to close Thursday next, Decemher 15th, are stated. For the spring meeting of 1905, three stakes are offered for two-year-olds, foals of 1903. The Juvenile, $2,500 added at five furlongs; the Fashion, for fillies, two-year-olds, $2000 added, at four and a half furlongs and the Eclipse, $5000 added, five and a half furlongs.

For the spring meeting of 1906, the Withers, $5000 added, for three-year-olds, foals of 1903, one mile; the Ladies, $4000 added, for fillies, three-year-olds, foals of 1903, one mile; the 40th Belmont, for three-year-olds, foals of 1903, closed for foals of 1903 with 160 entries. To close for yearlings, foals of 1903, December 15, 1904. The Westchester Association to add a sum sufficient to make the value of the race $25,000. The winner receives $21,000, the second $2000, the third $1000, and the nominator of the winner $1000. Plate of the value of $1000 is also added to the stake. Mile and three furlongs.

The Ninth National Stallion race is for foals of 1904, the progeny of stallions duly nominated to he entered and named by midnight of Thursday, Decemher 15, 1904. The Westchester Association to add $5000 and 50 per cent of the stallion entrances to the stake, to he run for hy then two-year-olds, during the spring meeting of 1906. The distance is five furlongs.

For the spring and autumn meetings of 1907, the 41st Belmont and the Ninth Matron Stakes are offered. The 41st Belmont, for then three year-olds, will close for foals of 1904, Decemher 15, 1904, and for yearlings (foals of 1904) September 15, 1905. The Westchester Association to add a sum sufficient to make the value of the stake $25,000. Plate of the value of $1000 is added hy Mr. August Belmont. Mile and three furlongs.

The Ninth Matron, with $10,000 added, for mares covered in 1904, foals of 1905, to he run for then two-year-olds at the autumn meeting of 1907. The event to he run in two races, one for colts and geldings, the other for fillies, distance five furlongs. Subscriptions for mares to close at $20 each, or only $10 each if the money accompany the entry.

The list of leading sires of the year in America up to the present time shows that Meddler has a hig lead with $219,605 to the credit of his get, Ben Brush is second with $156,550, Hamhurg third with $115,145, Ben Strome fourth with $114,464, Kingston fifth with $98,229. Hastings sixth with $94,278 and Goldfinch seventh with $91,646. No other stallion is credited with as much as $90,000 won hy his produce, hut there are thirteen others whose get have won $50,000 or upwards.

A dispatch from New Orleans dated Decemher 7th says: "It is to be war hetween the New Orleans Jockey Cluh and the Western Jockey Cluh. This ie the decision which officers of the former cluh have reached. The fight against the Western association is to he led hy Corrigan, who already has a number of scores to settle with the association. He has decided to go into this thing with heart and soul, and not only will he have the power of the New Orleans Jockey Cluh hack of him, hut racing men here helieve that he will throw all the other tracks in which he is interested into the fight and they are saying that the days of the Western Jockey Cluh are numhered. Tonight it was announced that the New Orleans Jockey Cluh, within a few days, would make application for membership in the Western Jockey Cluh. It is a foregone conclusion that this request will he turned down. Officers of the New Orleans cluh will then ask again for an equitahle division of dates. This request will also he refused, according to the admission of Sam Heaslip, the president. Suit will then be filed in the Federal courts here to force the Western Jockey Cluh to show reason why the new cluh here was not given a divison of dates and asking for a forfeiture of the charter of that association, under the claim that its provisions have heen violated. The fight promises to become one of the warmest in the turf history of the West."

A Chicago telegram adds: "The name of Edward Corrigan's hacker has heen disclosed. The millionaire who offered the "Master of Hawthorne" a fortune to start war with the Western Jockey Cluh has been discovered. He is none other than H. E. Huntington of New York and San Francisco, the nephew of the late Collis P. Huntington. That Huntington and Corrigan will lead a gigantic crusade against the Western Jockey Cluh there is now no douht."

It may he stated on excellent authority that Imp. Meddler, the thoroughhred stallion who stands this year at the head of the list of the twenty leading sires of America and whose get have won during the year nearly $220,000, will be sent hack to Europe. When Meddler was sold at the recent dispersal sale of the Whitney Stud in New York for $51,000, Mr. Mattbew Corhett was the ostensihle purchaser. It was known at the time that he was acting for another party, though he denied this. A few days later definite announcement was made that Mr. Corhett represented Mr. Clarence H. Mackay and Meddler wae sent to the latter's Silver Brook Stud in New Jersey. An offer of $76,000 was made for the horse hy M. Edmond Blanc, the French turfman, who paid $187,000 for the great English Flying Fox. This was declined and it was expected that Meddler would he mated to the splendid hand of mares at Mr. Mackay's New Jersey establishment. It has developed, however, that Corhett was acting for Richard Croker and that Meddler will be sent hack to England to he placed in Mr. Croker's stud there.

The Family Cluh handicap which is to he run today at Emeryville has the following entries: Military Man, Mansard, G. W. Trahern, Toledo, Veterano, Ishlana, Oro Viva, Telephone, Leila, Elliott, Claude, Stroller, Ananias, Fossil, Divina, San Nicholas, Barkleyite, Bombardier, Whoa Bill, Vesuvian, Gold Money, Arcade, Nigrette, Gateway, Modicum, Honiton. A very handsome silver cup of generous size which is to go to the winner of this race has heen on exhihition this week in Shreve's window. It was contributed hy The Family Cluh, for which the handicap was named.

Captain Thomas B. Merry writes us that his hook, *The American Thoroughbred*, will he out ahout January 1st. The hook is all set up and some of the forms worked off, hut there has been a delay in procuring the engravings, but all the presswork is promised hy December 25th and then the hook will go to the hinders. Everyone interested in the hreeding of thoroughhred horses should secure a copy of this work of Captain Merry's as it will contain valuahle statistics and facts that have never hitherto heen published, and that are of great value to every hreeder.

Thanks to the generosity of the various eastern racing associations the value of steeplechase stakee and purses has largely increased, and this should bring many good horses out next season. A good horse, well engaged in steeplechase stakes was a profitable asset in 1904. Good and Plenty and Foxhunter' Mr. Hitchcock's two cracks, for example, won more than $35,000 and there were a half score others who figure hetween $5000 and $7000. With every association increasing the value of their cross-country stakes proportionally to the stakes on the flat, and with two new fields open—Aqueduct and Pimlico—not to overlook the rich new snorting stake, the Whitney Memorial, opened at Belmont Park, the coming year should he the most hrilliant in the history of the sport hetween the flags. What subscriptions have heen taken for the Whitney Memorial have not yet heen made public, hut it is almost certain that every man who owns a steeplechaser will he represented. The value of the stake, wholly aside from the sentiment and the glory in the winning will bring many subscriptions.

Africander is now the property of Mr. James B. Haggin, who hred him and sold him as a yearling. He was purchased November 26th hy Mr. Haggin for a price said to he $15,000, and he has heen shipped to the millionaire's Elmendorf Stud at Lexington, Ky. It has heen known for some months that Mr. Haggin desired to secure the hest son of his stallion imp. Star Ruhy, and negotiations are said to have heen pending for some time past. In these negotiations Mr. Haggin was represented hy Sydney Paget and A. J. Joyner. They were closed the date given by the purchase from Sim Deimel.

"Virginia" Carroll is reported to he dying in a New Orleans hospital. He is one of the peculiar characters of the turf and has heen in trouhle on various tracks owing to his ungovernable temper. Off the hlock he is an agreeahle man to talk to hut when wielding the chalk and chamois his hitter tongue and abusive manner make him feared and hated. Carroll's reputation for repartee is the hasis of many good stories of racing men. One of the hest of these is the story of a "ruhe" who stood in front of Carroll's hook for ten minutes trying to make up his mind to het a dollar on a 6 to 1 ehot. Finally he pointed to the name of the horse with his umhrella and said, "Bet you one on Sister Lillian." "You'er on," said Carroll grahbing the umhrella and throwing it into the hox. Then he called out the het for the ticket, "6 umhrellas to 1 umhrella, Sister Lillian."

"Fred" Taral, the American jockey, arrived at New York from Europe last week. He said he had had a successful season on the Austrian and German turf. He added: "I stand second on the list of winning jockeys over there. The top man had ninety mounts more than I, and won only eight more races. I have been riding for Baron Ulchritz, with Baron Springer having second choice of my services. Vienna has the finest tracks in the world—two miles, with great, wide turns and a mile straight-away on the grass. I shall go hack in Fehruary and shall he accompanied hy my son John, who is fourteen years old, weighs sixty-eight pounds, and who can handle a thoroughhred almost as well as his father."

Dick Welles may have made his last appearance on the turf. J. B. Respess says he will hreed ten of his own mares to Dick Welles next spring, and permit the same numher of outside mares to he mated to him. Respess admitted he would endeavor afterward to train the mighty son of King Eric again, hut he confessed he had grave douhts of his wonderful colt standing severe training. Welles has not faced the starter since the fall meeting at Latonia in 1903. Respess is making his Ohio farm a pretentious hreeding plant. He has two other stallions in service, Maceo, Belle's Commoner, and upwards of thirty mares. Respess hopes to he able after two or three years to have a stable of racers all of his own hreeding. He says puhlic opinion is against him in his efforts to establish a successful hreeding farm in the Buckeye state, hut he is going to test the experiment, and if in two or three years he finds no good results he will transplant his estahlishment to the hlue grass and hegin anew.

Five hundred thoroughhreds were sold by the Fasig-Tipton Company at their Fall Sale at Lexington last week, and the average was $200 per head. The hightest price of the sale was $2150 paid hy Charles W. Moore for Jessant, a four-year-old hay mare by Ladas, out of Orle hy Bend Or, she from Bonny Jean (an Oaks winner) hy Macaroni. The stallion Gone Coon was purchased hy W. L. Powers for $1500; Kilkerran went to Talbot Bros., Paris, Ky., for $550. Ahheywood was knocked down to Raymond Dale at $200. Col. E. F. Clay hought Bridgewater for $1600, and Cateshy Woodford got St. Evox for $200. Hernando went to Milton Young at $1600. Dr. Rice went to W. L Powers at $500. H. N. Davis got Standing for $1000.

Napa Stock Farm has secured first call on the services of John Bullman who rode the farm's crack filly Arishe in her races last season. Bill Carroll has in training a dozen or more yearlings hred at the Napa estahlishment of A. B. Spreckels and like all the youngsters from that farm they are a grand looking lot. Supt. Geo. Berry says this year's crop is the hest the farm has yet produced.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Coming Events.

Rod.

April 1-Sept. 10. Oct. 16-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed

Sept. 1-May 1—Open season for shrimp.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Sept. 10-Oct. 16—Close season for catching salmon.

Oct. 16-Nov. 15—Close season for taking salmon above tidewater.

Nov. 15-Sept. 10—Season open for taking salmon above tidewater.

Gun.

July 1-Feb. 15—Dove season open.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Nov. 1-July 15—Deer season closed.

Bench Shows.

Dec. 6, 7—Bay State Co-operative Bench Show Association. Brocton, Mass. Tom B. Middlebrooke, Clerk.

1905.

Jan. 19 20—Bay State Co-operative Bench Show Association. Lynn, Mass. Tom B. Middlebrooke, Clerk.

Jan. 24, 26 Rhode Island Kennel Club. Providence, R. I. H. M. French, Secretary.

Jan. 25, 28—National Fanciers and Breeders Association. 5th annual show. Chicago. W. K. L. rules. T. A. Howard, Superintendent, Chicago, Ills.

Feb. 13, 16—Westminster Kennel Club. New York City. Robt. V. McKim, Secretary.

Feb. 21, 24—New England Kennel Club. Boston, Mass. Wm. B. Emery, Secretary.

March 1, 4—Long Island Kennel Club. Brooklyn, N. Y. Jos. M. Dale, Secretary.

March 8, 11—Duquesne Kennel Club of Western Pennsylvania. Pittsburg, Pa. Fred'k S. Stedman, Secretary.

April 19, 22—Atlantic City Kennel Club. Atlantic City, N. J. Thos. H. Terry, Secretary.

Field Trials.

Dec. 3—Continental Field Trial Club 10th annual trials. Thomasville, N. C. John White, Secretary, Hempstead, L. I.

Dec. 12—Alabama Field Trial Club Huntsville, Ala. J. M. Kirkpatrick, Secretary, Huntsville, Ala.

Dec. 12—Pointer Club of America. 5th annual trials. C. F. Lewis, Secretary. Barber, N. C.

Dec. 17—Eastern Field Trial Club. Waynesboro, Ga. Simon C. Bradley, Secretary-Treasurer, Greenfield Hills, Conn.

1905

— —American Field Futurity Stake. For Pointers and Setters whelped on or after January 1, 1904, whose dams have been duly qualified. Am. Field Publishing Co., Chicago.

Jan. 9—Pacific Coast Field Trials Club. Bakersfield, Cal. Albert Betz, Secretary, 201 Parrott Bldg., San Francisco, Cal.

Jan 9—Texas Field Trials Club. 3rd annual trials. Near San Antonio, Tex. T. A. Feriet, Secretary, San Antonio, Tex.

Jan. 10—Georgia Field Trial Association. Albany, Ga. P. M. Essig, Secretary, Atlanta, Ga.

Jan. 16—United States Field Trials Club. Grand Junction, Tenn. W. B Stafford, Secretary-Treasurer, Trenton, Tenn.

GOSSIP FOR SPORTSMEN.

HUNTING AND ITS MORALITY.

This is the open season for game and the frosty mornings are calling the eager sportsmen to the marsh, the brown fields and the sear hill woodlands. To one who has ever experienced the keen zest of the chase or the music of the cracking guns, it is a call which bears an indefinable charm. Your true sportsman is a fellow of infinite longing. On the approach of the winter season he rubs up his old gun with the same exhilarated joy that a boy drags out from the garret the winter toys which have been stowed away over season. He has the "fever" and nothing but a day's tramp after the game will satisfy the deep longings of his soul.

What is the secret of it? Where is the mainspring of the hunter's joy? Whore is the charm? Can the sportsman satisfactorily explain in just what the pleasure of it lies? Is it the old instinct of the savage triheeman asserting itself in the civilized man? Is it the hunting man of the stone age still alive in this age of electricity? After all, is the secret found in the mere joy of killing? Is the sportsman of the twentieth century a savage whose real joy is the mere slaughter of God's creatures?

That always interesting coterie of persons--the men and women who from time to time contribute their thoughts to the *New York Sun*—in the course of a year cover a wide range of topics in their communications to the editor of that journal. The present subject has not escaped, and lately there have been several letters dealing with the psychology—shall we call it?—of the hunt. One of these sets forth the personal experience of the writer. He says:

"To the Editor of *The Sun*—Sir: I am glad somebody has had the courage to publicly declare that he is disgusted with murdering the wild things of the woods.

"I came to the same conclusion as your correspondent 'G. H. C.' some years ago, and some of those who used to hunt with me have given it up also. The strict protection of game during a long period makes the thing more pitiful to my notion. Quail, partridge, rabbit, deer, all get so used to seeing men during the closed season that they become quite tame, and on the day the law is up an army of men and dogs appear and kill off about half of the whole wild population of field and forest before they take alarm and make an attempt to protect themselves.

"I have watched the death struggle of a few of these beautiful wild things. No more for mine."

The writer is evidently a person sensitive to suffering and the sight of the death agony even in a bird or a rabbit has overweighed with him any sensation of pleasure he may have experienced in bringing his quarry to earth.

There is always a danger of sensitiveness degenerating into squeamishness. There is always a chance of proper sentiment being turned into silly sentimentality. Reverence for honored things may sometimes be carried to ridiculous extents, as in the late case of the Boston "patriots" who protested against the flag of the United States being used as a cover design for one of the popular magazines. Fine feeling may devolve into fine folly.

Is the correspondent of *The Sun* guilty of a like error? It is certainly true that he has presented the uglier and the rarer experience of the man who is out "gunning" for birds. In the vast majority of cases the sportsman does not witness the "death struggle" at all. Save now and then the bird is stone dead when he reaches it. In the rarer instances when he comes upon his game before life is totally extinct, there is no doubt that consciousness, as we would say in the case of a human being, has passed away. Occasionally there is a bird with a broken wing which has to be put out of its suffering. But in the great majority of shots the bird falls limp, death coming in the twinkling of an eye. There is no suffering, no "death struggle."

Another phase of the humane individuals' cult is this—the principal argument used by the extremists for gentle treatment of wild creatures is based on the placing of wild game on the same plane of physical conditions, nervous system, sensitiveness to pain, fear of death and emotional expression that the human family is endowed with. This assumption is without doubt to an exceeding degree lacking intelligent foundation in fact and a sentimental conclusion that is apt to carry unthinking but well meaning people to such extremes that in their endeavors to ameliorate the conditions of wild game they frequently cause damage and do injustice to others that overbalances to an incalculable extent the comparatively medium amount of so-called pain and suffering they endeavor to restrain.

But aside from this. Is it likely that the act of shooting a bird—a game bird which is to go upon the table—is wrong in the sight of its Creator? Is it against the natural order of things? Is it something that was not intended by Him who made the birds and the beasts of the field? Every being, every live thing, we are told, is placed here for a purpose; each has its useful end to serve. Is it possible that when the bird or the rabbit or any other animal is used to furnish food for man it is doing other than fulfilling its destiny? There is other blood-letting than that by the sportsman. There is other pain than that suffered by the huntsman's prey. Our domesticated animals, our pigs and cows and sheep are bred to die, to furnish food for man. The "death struggle" is just as sharp in the case of these. But die they must and no man raises his hand in protest; no man thinks that it is wrong or cruel—or at least the great majority of us do not. It is all in the plan of living. We cannot come to think that the slaughter of the lamb, which goes to its death visibly reluctant and bleating, it is said, is in any greater degree in consonance with the Divine purpose than is the shooting of the bird by the huntsman. It is very probable, it seems, that they both have no more than served the ends of their creation.

HOW TO BUY A GUN.

On going into a sporting goods store, where there are perhaps scores of all kinds of guns in stock, the ordinary man, whose build and eyesight are of the usual kind, can generally select the guns, with the assistance of an expert salesman, that are likely to fit him, as distinguished from those that never would. By flinging a dozen or so up to his shoulder and aiming with each of them at any mark on the level with his eyes, he can easily ascertain if his aim is correctly obtained the moment the gun touches his shoulder. If it should be, the gun is not a badly fitting one, though a better fitting one may possibly be obtained, either by further trouble in selection or by slightly altering the stock, which the gunsmith generally connected with store can easily accomplish. We need not explain how this is to be done. It is the dealer's or the gunmaker's province to carry out his instructions in that respect, where he agrees with his customer that alteration to some extent is required. A gunstock can be altered slightly in shape almost as easily as a walking-stick. It should be stated, however, that very few gunmakers can tell exactly what alteration a shooter requires in his gunstock merely by observing, however closely, how the gun is handled in the gunshop. If possible, an opportunity should be taken of going with gun and gunmaker to a shooting ground for an hour's practice at clay pigeons, so that any pecularities in the customer's style of shooting may be noted by his gunmaker in order that they may be provided for by the latter in the final shaping of the stock. A tall, long-armed and long-necked man will be found to shoot best with a long, well-bent stock. A short man wants a straighter stock, while by the breadth of chest is decided the amount of 'cast-off" required, always keeping in mind the fact that the less "cast-off" the gun has when completed the better it should shoot and the better it certainly looks.

The tendency nowadays is to avoid much "cast-off" and to have the stock as straight as can be compatible with ease in shooting, and the prevention of all need for the shooter to screw round his face to bring the barrels right in line with his eyes. There are other subsidiary points that a gunmaker has to see to in fitting a gunstock, but we need not trouble our readers with them, as they are mainly technical. The difficulty really lies in getting a gunmaker to pay as much attention to the fitting of a low-priced as he would to that of a high-priced weapon. He may grudge the expenditure of valuable time spent on fitting the former class of gun, which he usually expects to sell without incurring much trouble, for there is usually no charge made to a shooter for fitting him with his gun whether its price be high or low, though of course there is a limit to the pains one can expect a seller of a gun at a low price to take over completing the transaction, as there would be no doubt in re-adjusting a suit of ready-made clothes sold at the very lowest cash price over the counter. But nevertheless if a shooter wants satisfaction in using a new gun he should always have it fitted to his shoulder by his gunmaker. Without that he can seldom do good work with it in the field even after by dint of long practice, he has accustomed himself to its points of misfit, which for some time are certain to make the gun jump to an undue extent, the left barrel usually going higher than the right, and so on. On the other hand, if the gun fits accurately, it seems much easier to aim with, and feel lighter in the grasp altogether than one that does not do so. In fact, years of practice with a badly-fitting gun may not get a man out of shooting badly with it, and that is the risk one runs in purchasing any gun without a proper trial, which no good gunmaker ever refuses to give to his customer whom he knows, or recognizes, as trustworthy in business affairs. Where a gun, then, is ordered by letter and no opportunity of fitting is given, it is a wise precaution to stipulate for a week's trial of the gun, even where the usual statement of the shooter's height, length of arm, and chest measurement across the shoulders has been supplied, with the view of enabling the gunmaker to judge whether any particular gun in stock is likely to fit his customer.

The success of such leading gunmakers as Hunter Arms Company, Remington Arms Company, Parker Bros., Ithaca Gun Company, Clabrough, Golcher & Company and the Winchester Repeating Arms Company is the result of attention to these details and scientific application of the gunsmiths's art to individual demands.

DISPOSAL OF KILLED WILD DUCKS.

The petition before the Sonoma county Board of Supervisors asking for a change in the ordinance relating to the season for killing ducks, the bag limit, and the disposition of bags made by hunters deserves careful consideration, says the *Santa Rosa Republican*. It is right for the law to protect our game birds and prevent extermination by wanton slaughter. It is right, too, that the season be carefully limited. But, from the point of view of the general public, it seems scarcely fair to take from the majority of people within the county the privilege of purchasing ducks in the open market. Very naturally the sportsman who spends his money and time to bag a mess of ducks holds he should have a few extra privileges. When one thinks about it, however, it hardly seems right that people who have neither the time, the skill nor the inclination to hunt and spend tiresome hours in the marshes, should be deprived of a little table luxury like duck, of which there is surely no scarcity in these parts. It is to be hoped, therefore, that some favorable action will be taken by the Supervisors looking toward lifting the ban from those unfortunately not included in the envied category of sportsmen.

FROGS FOR BLACK BASS.

Sporting goods stores in the big cities now carry frogs as a regular article of commerce. There are frogs of all sorts, for the gatherer is catholic in his tastes, and will clap his net over a tree frog or meadow frog as readily as over the marsh frog, which he finds in low, grassy ground or on the edge of a lake, stream or stagnant ponds.

The angler going out for a day's or a week's fishing will commonly take his frogs with him, and he should know how to select them, for upon his choice of bait will depend largely his success as a fisherman.

The inexperienced man wants as much frog as he can get for his money—all sizes of them sell at so much a dozen—so he will take the biggest in the box, which is a mistake.

In choosing frogs, the angler should remember that the smaller the better. This is true even of frogs not larger than the first joint of a man's thumb. Some anglers contend that these are too small to attract sufficient attention and that the bass cannot see them a sufficient distance away; but a bass in common bass water will see a frog of that size at a distance of twenty feet, and hit at it, too, if it is hungry.

The small frog casts better, going out well with the line and striking the water with little splash to alarm the fish, and, what is more important, the bass takes it in with one gulp, permitting an almost instant reefing in of the line and a strike by the hook instead of swimming and toying with it for ten yards to realease it altogether, if the point of the hook is discovered The small frog from an inch to two inches long hooked through the lips just behind a small spoon makes the most fatal of all baits in July and August.

In keeping frogs on long railway journeys and for days after the fishing ground is reached, many men make the mistake of giving too much moisture. It is true that marsh frogs live in water but they do not seem to need it in captivity.

Frogs do not need food in captivity; at least not within such time as an angler has use for them. They will live comfortably enough without food for two weeks and at the end of that time he apparently as strong and fat as when captured.

On a good lake or stream, one man will use three dozen frogs in a day unless he fastens them to the hook with a rubber band. A frog that has died in the box is just as good as a live one for casting purposes if used immediately and should not be thrown away.

CAMPERS DESTROY GAME AND FISH.

One of the greatest enemies of game is the summer camper. As a rule it is considered necessary to keep at least one gun in camp, and very often it is put to nefarious use. There are many citizens, otherwise law-abiding, who show no compunctions in violating the fish and game laws. To those unacquainted with the ethics of sportsmanship, the killing of quails and other game out of season induces no qualms of conscience, and when such persons are in the field all creatures are considered legitimate targets for their aim. If it were possible to erect notices in the vicinity of each camp, warning campers to observe the game laws or suffer the extreme penalty for an infraction thereof, some of the thoughtless persons who have been accustomed to partaking of quail on toast in the months of July and August might be induced to give more than passing notice to the warning, and finally develop into law-abiding citizens. Many campers seem to consider that the illegal killing of game does not constitute a crime unless they are caught in the act, and actually boast of their nefarious slaughter. An experience in court would probably prevent further violations of the laws on their part, but unluckily for the best interests of our game, these individuals are brought to grief far too seldom.

The cable tells that the world's record grouse bag was made August 24 at Broomhead, near Sheffield, England, by Rymington Wilson and eight other guns. The hunters bagged 2748 birds—these birds were nearly all sent to city game dealers.

A solution of the problem of supplying the cities of the country with a substitute for grouse and prairie chickens which has become impossible through the activity of the game wardens in the states where such birds are found, is the following. The ordinary guinea fowl when half grown is almost an exact replica of the real game bird at its best. A New York farmer has been selling them to some of the big eastern caterers at $1 apiece, finding a ready market for all he could supply. The patrons of the high-priced hotels ordered grouse and forthwith the cooks sent the guinea hens to the spit, but the result was the same for the consumers expressed satisfaction with the toothsomeness of the diet, and they were none the wiser. The New York demand is said to be much greater than the supply of such birds.

Broken Bones.

The most serious accident which can occur to a sporting dog, except getting into the line of fire of a careless shooter, is one resulting in broken bones. True, such serious accidents are, in the case of field dogs, of rare occurrence, and also difficult of explanation as far as the cause goes, for except it be a case of a fall from precipitous ground, or from being run over, it is but very seldom that the actual misfortune is witnessed by the dog's owner or keeper, and one can but surmise as to how it was actually caused. In most instances it is the leg which suffers, but the ribs, the tail, or the head, also occasionally come to grief.

To understand what broken bones mean in a dog, it must be remembered that fractures may be simple, compound, or comminuted. Of these the two latter rarely, if ever, offer any chance of being cured, as the soft fleshy parts and muscles lying around the bone are involved, but simple fractures, in nearly all instances, lend themselves to successful treatment, provided the dog injured enjoy otherwise good health.

Simple fractures usually occur in the legs, shoulders or thighs of the dog, and are constituted in the simple snapping of a bone. When they occur in the leg they are easily distinguished and located. The dog will at some times exhibit considerable evidence of pain, at others, but little sign of suffering or even of uneasiness, in the injured limb is forthcoming. In broken leg-bones, however, the pendant position of the limb will be pretty clear evidence of the injury suffered, while local swelling, twitchings, and the grating sound of the injured parts, known as crepitus, will be further proof of the damage sustained.

It is therefore very easy to determine a fracture of the leg-bone, whilst, when the injury is in the shoulder, in the back or neck, the refusal of the dog to move and an almost complete lack of sensitiveness marks such injury; loss of consciousness, damage to the bones of the head. The constitutional symptoms are quickness of breathing and increase of temperature.

Unskilled persons dealing with fractured bones in the dog must perforce possess some knowledge of canine anatomy, but this need not be very extensive, and can be gathered from illustrations of the structure of the dog. When the fracture is very simple and no displacement of the bones has taken place, a mere crack in the bone in fact, it is not very difficult to bring together the two ends of the broken bone into proper position. Some force may be required to be exerted, but it must be employed with care and moderation, and with knowledge of the anatomy of the part to be operated upon. It is necessary, having set the broken limb, to assure oneself that the adjustment of the fractured bones is correct, and to provide means for their retention in their proper place.

The most easily applied and most effective bandage for this purpose is the starch bandage, which is simplicity itself. The rolls of bandage should be thoroughly soaked in starch prepared exactly as for laundry use, and then applied to the injured leg. Commence binding from the toe upward, working carefully until well above the fracture, and seeing that the broken bone is in its proper and natural position. The bandages must be applied even and firmly, and when the operation is complete light splints applied until the starch bandage is thoroughly dry. It will then have formed a close, stiff sheath to the wounded member, and the splints being thoroughly soaked with the starch, then bind them on from the toe to well above the fracture.

By the end of five or six weeks the broken bone will then be thoroughly healed, and the bandages removed by carefully unrolling them or by cutting them off, damping the strips meantime with tepid water to dissolve the starch. Then wash the bandaged parts thoroughly and apply a little vaseline. Treated in this manner, a sporting dog should suffer no permanent injury from a simple fracture of the leg bone.

Kennel Suggestions.

The idea that any old stuff is good enough for a dog should be relegated to the realms of those old aphorism—going to the dogs—the death of a dog—try it on the dog—and so on. Although the proposition that "Great Dane" advances in the *Illustrated Kennel News* sounds singular—that broadly speaking the best families of various breeds have been raised to their present state of superiority by continued attention to feeding and breeding, and that it cannot be said either of these agencies has played the more important role in amelioration, since both are equally necessary to produce and maintain improvement—it would seem to be true. This writer maintains that digestion and assimilation, like other functions, are hereditary, more or less, and that the finest strains of dogs have enjoyed a generous feed bowl of elements so necessary to their fullest development they have acquired a digestive apparatus that demands ample and well balanced feeding. One occasionally sees a well bred animal in an unthrifty condition where ordinary individuals do tolerably well, and careless owners are apt to attribute such condition on the part of the well bred dog to being a bad doer, without giving a thought to the fact that it inherits from its line of well bred ancestors an assimilative system calling for good and plentiful diet, and that it cannot therefore be expected to thrive on a diet barely sufficing for dogs of strains or families hereditarily inured to indifferent feeding.

There is a good deal of truth in this as observation will readily prove, the mongrel of the street being able to thrive on food and little of it, that would disarrange the internals of the highly bred dog. This subject of feeding dogs has been little considered further than that dogs must have something or other every day, but if we will think a moment and consider the vast influence which proper feeding has upon cattle and poultry, there is ample reason to believe that proper food and lots of it, clean and wholesome, has its bearing upon the refinement of the stock.

It has been proved that when animals that have been accustomed to good food or come of a strain of well fed stock, are subjected to inferior feeding both in quality and quantity, succeeding generations will deteriorate until the once superior strain reaches the level of the common stock ordinarily kept under such conditions, for the development of an animal is limited by its environments, and common every day stock represents the highest development under common everyday management. Improved breeding involves improved methods of feeding, hence the up-to-date dog biscuit representing the results of generations of experiments, is as far ahead of the ordinary swill tub feed, as a thorough bred dog so called is superior to the "just dog" that runs the streets. The idea that well bred dogs therefore cost no more to feed than poor ones, is not altogether true, or that high bred dogs that are good for anything should prove superior to ordinary stock under ordinary as well as under improved life conditions is as absurd as it is misleading. While it costs proportionately more to keep well bred stock than it does to keep poor stock the profits on the former are so much more that the difference is more than counterbalanced.

Well bred dogs undoubtedly pay better and give more satisfaction than do ordinary bred ones, if proper care and feed be given, but their superiority is due to their having received superior food and management, and if they are to remain superior they must continue to enjoy these advantages. A well bred, well grown, well fed Mastiff, for instance, the product of years of liberal feeding and good management, would do but poorly if afterwards restricted to scanty and unsuitable rations and to expect her on such illiberal fare to breed puppies of the largest size and greatest vigor would be to cherish anticipations extremely unlikely to be realized

A perfectly developed, firm fleshed, healthy, active, intelligent and contented dog is the exception rather than the rule. Such an animal is not an accident. It is the product of understanding and solicitous care—the ample reward of the owner who really loves his stock and who will at any time sacrifice his own comfort for its well being. The idea in all this rests principally in the fact that the dog's environment and condition today is to a great extent purely artificial, and these life conditions therefore are under our control. We can create conditions that are conducive to good health and development, or such as may prove injurious and predispose our stock to disease. Let us therefore supply the best conditions. Let us so feed and care for our dogs as to secure to them intelligent and contented minds in healthy and well developed bodies.

The question of food is at the root of all life conditions, for without food even existence is impossible, and in proportion as our dogs are properly or improperly fed, so are their organisms fitted or unfitted to appreciate the joy of living. Feeding and breeding therefore go together. Both have shared equally in producing our present day dog, and it is only by the most judicious care in feeding, as well as in breeding, that the standard of excellence thus reached can be maintained. Without good food all improved strains of animals, no matter how well bred, deteriorate or run out, and it is only when the conditions of feeding and management remain unchanged that valued characteristics, owing their existence to these conditions, are transmitted from generation to generation. Thus the familiar adage that "the breed goes in at the mouth" is like so many old breeding maxims, not without foundation.

In all this there is food for thought as well as the dog. Light, air and good food are the foundation stones on which we shall best build a well poised, active, intelligent, robust system. One has a good example of the truth of the above contention in favor of well nourished bodies, in the condition of the youngsters who live in the tenements of a big city like New York. Thin, puny and abnormally old before their time, these badly nurtured human beings are apt example of the argument that good feeding and good breeding should go hand in hand.

Perhaps it is this inattention to the proper requirements of the feed bowl that we, as a nation have missed so many times in breeding high-class stock from the best that England produces, and that such strains usually deteriorate. If one took all the kennels in the country and examined the menus on the kennel table, we should find that cornmeal or rice enters into the regular diet every day almost in the year, resulting in the attenuation of the physical properties, skin and blood diseases and general malnutrition. Sameness of diet is also a damning influence on the highly organized dog. But it requires trouble on the part of the kennelmen to distribute a variety of food in the kennel menu and the idea is fallacious that dog biscuits, are expensive. The best, and most representative, contain a variety of valued food properties and must naturally be the most useful food in the kennel, at least we have found them so, and we have tried the whole gamut of the feed bowl. Biscuits cost a bit more perhaps at the outset, but the continued good health of the dogs where a large number are kept, more than counterbalances that and makes the biscuit the cheapest food in the end, for in the use of biscuits a lot of labor and expense in cooking and serving are avoided.—*The American Stock-Keeper.*

DOINGS IN DOGDOM.

KENNEL LAMENESS.

For obvious reasons after the shooting season is over kennel lameness may be expected to show itself among sporting dogs. Some practical hints as to the true origin of the malady, and the best method of preventing it are the following. It is usually ascribed:

To want of exercise and general inactivity following the regular season, and in a measure these causes may have something to do with it, but kennel lameness is really due to rheumatism. This may be caused by an unhealthy range of kennels, or the bad situation in which they are placed, coupled with undue exposure in inclement weather, and, as before mentioned, a lessening of that care which highly-bred and carefully-trained sporting dogs require, these being more subject to the malady than others of their kind, although all dogs are susceptible to rheumatic affection. Damp kennels or kennels built over a porous subsoil are chiefly to blame, whilst the too frequent employment of concrete as flooring—concrete made with Portland cement, that is—has a great deal to do with causing an outbreak. Concrete of this kind is rarely impervious to damp, and is not a healthy material for kennels. It should be made with hydraulic lime, not with Portland or kindred cements. Under certain conditions such concrete will absorb dampness, and exude an unhealthy moisture under others, and this sweating of the material is most inimical to a healthy state in dogs.

A MICKLE FOR A MUCKLE.

An English sporting paper revives a good old story of Mr. Merry, the owner of Thormanby, Doncaster, Marie Stuart and other famous race horses. Our contemporary says:

"Mr. James Merry in his early days was wont to amuse his leisure with all kinds of sports such as would not be permitted in these times, and amongst other animals he won and lost his money on was a famous badger who had become a terror to the fighting dogs of Bonnie Scotland.

"He was a champion, that badger, that few cared to stake their money against, but at last a couple of venturesome Edinburgh sportsmen backed a dog of theirs for a hundred against the badger.

"At the appointed time Mr. Merry proceeded by coach to Edinburgh, where the encounter was to take place, taking the badger with him in a sack, but when he arrived at his journey's end he discovered to his mortification that the badger was dead.

"However, he put as good a face on the matter as he could, and shouldering his sack set off to meet by appointment the men, with whom he had made the match, at an inn. Carefully depositing the sack under a chair he warned his companions that the brock was 'unco' savage, and then proceeded to discuss matters with them. Drinks having been ordered, some, cautious 'word fencing' began.

"'Jammie,'" said one of the dog men, 'we've just been thinkin' that, as oor dog's no that weel, it wad be better to put aff the match, and we're willin' to pay ween forfeit.

"But Mr. Merry would none of it. He boldly insisted upon the match taking place; the 'brock' was never better, etc., etc. The dog men offered a 'pony,' which was indignantly refused, but at last, after considerable bargaining, in which both parties played the game of bluff with great skill, a bargain was concluded and £50 was handed over to Mr. Merry. Delighted at getting the better of him, as they thought, they could not restrain their glee.

"'Oh Jammie, mon,'" shouted the two in chorus, "we thocht ye had been smarter than that; the dog's dead."

"'So is the 'brock,' replied the future Glasgow iron-master drily."

BOSTON TERRIER NOTES.

If the writer were asked what is the most popular dog in America today of the non-sporting breeds he could with all confidence respond "the Boston Terrier." He is practically the only general dog of American production and it goes without saying that if other varieties are to follow in the way of dog flesh that appeal to the foreigner, who is not a bigot, then indeed will Europe have to look to her laurels in producing useful dogs that from their very make, shape and manners naturally force themselves ahead in the eyes and in the homes of an intelligent public. Such an even stud that Mr. Myron W. Robinson owns, writes F. Freeman Lloyd, is proof that the Boston Terrier has reached a state wellnigh perfection and that it is a breed that must live forever.

It has been the traveling American who has introduced the Boston Terrier to other parts of the world where they knew him not; and furthermore we should remember that all nations are very fond of their representative dogs. The Englishman has his Bulldog, the Frenchman his Poodle, the German his Dachshund, the Russian his Borzoi, the Italian his little Greyhound, the Scandinavian his Elkhound, the Samoyede his Sledgedog, the Persian his Greyhound, the Chinese his Chow-chow, the Jap his Spaniel and the Thibetan his Llassa dog. The Australian has his Kelpie and the African his Kaffir cur. In short, north, south, east and west on this globe of ours where man can live there is to be found his boon companion, the dog. If we put on one side our insularity, our self-sufficiency, we will find that all these dogs originated from a parent stock and that man has sought in his dog fancying exploits and experiments what best have suited his purpose, and, figuratively speaking, he has kept those that he liked while those he has not liked he has drowned.

The varieties of dogs are those best suited for the chase when the keenness of nose is required (hounds); then we have the fleet animal that because of continual usage at coursing runs by sight alone. It is a fact that a Greyhound, that comes under the second category, can use his nose with any dog but because of the surroundings of coursing and the care that is taken that he shall not use his olfactory powers he is practically taught to forget that which Nature gave him. Then we have the guard or house dogs, the cattle and sheepdogs, the earth-going dogs or terriers, and last but by no means least the dogs that you like to see about the house whether they be in the billiard room with their master or in the boudoir of the lady or ladies of the home. From incessant inbreeding and coddling there have been bred Toy Spaniels, many of them so mal-formed that they are troubles to themselves. Their skulls have become abnormal while their little jaws have become so puny that it is often difficult for them to eat. That they appeal to thousands it is admitted. The gay period of the Cavaliers is not forgotten and it might be there is a deal of sentiment connected with these Spaniels which we think must have originally come from the East. For pages we might dilate on the many varieties of the domestic dog that came from the wolf. Different peoples and different countries certainly require different dogs, and with all deference we submit that the Boston Terrier about fills the bill as "a decent little dog about the house," or a handy little chap that can look after himself; he is a sprightly companion, can kill a rat if required and is withal handsome to look upon. As an Englishman I admire the Boston Terrier as an American product, and what is more prophesy for him an increased popularity the world over when he shall be better known.

The Boston Terrier takes his name from Boston, Mass.; he is a product of the old breed of fighting dogs that were, and doubtlessly are still to be found at The Hub. There is nothing that appeals more to the settler in a new country than the domestic animals of the old. That is the reason why today when you go to a large show you can practically anticipate the language you will hear from the variety of dog that is to be found in the neighborhood. That the Englishman introduced the Bulldogs and Terrier to New England there can be little doubt. From the stock brought or sent over to Boston within the last century has been developed the Boston Terrier and a handsome and useful dog he is, and what is more there seems to be more money in him than any other dog of his weight that lives in America today. "Why don't you go in for breeding Bostons?" a gentleman from Connecticut remarked the other day; "there's more money in them than any dog I know."

Returning to the origin of Boston Terriers a writer (Mr. Boutelle), a Now Englander it is believed, and we know a keen observer, wrote in the *American Kennel Gazette* (the American Kennel Club's official organ), a lot of interesting matter on the variety that has no more fervent admirer that Mr. Robinson whose kennels it was our privilege to hurriedly look over when the dogs were leaving for the International Exhibition at St. Louis. Mr. Boutelle writes:

"There are many people who claim to 'be in on the ground floor' in the production of the Terriers, but to Mr. John P. Barnard, Jr., of Boston, the credit is mostly, if not entirely, due. Over twenty-five years ago one of the famous back stables belonging to the John P. Barnard Syndicate was situated on Myrtle street. This was the headquarters for nearly everyone 'doggy inclined' in the city. John P., Jr., had in his employ the late Tom Thornton, acknowledged one of the leading authorities on Pit Dogs of his day. Over the office, on the second floor, Mr. Barnard had a nicely arranged kennel, and the walls were covered with prints and photos of all of the leading canines of both countries. Truly it was a treat for the eyes to look them over. In his kennel pens were thoroughbred Bulldogs and Bull Terriers of every type and color. There were always competent men in charge. Still Mr Barnard was frequently on hand at feeding time and usually superintended their grooming. He took a personal pride in the advancement of his one hobby, the 'bullet-headed' dog. That bull-headed dogs were the outcome from the crossing of the Bull on the short-muzzled fighting Terriers, there can be but little dispute."

That the Americans have improved on the old fighting type of bull-baiting and dog-fighting Bulldog there can be little doubt when we consider that the Pit is an unhealthy spot, an objectionable location, and a vicious undertaking. It can be written that the Boston Terrier is nothing more or less than a "cultured" result of the intelligence of the dog breeder, and that while he has not lost in his gameness he has become a dog more of the companionable and household kind. Go where you will today in any large city throughout the Union there will you find the Boston Terrier, the most fashionable among the fashionable people that may be seen taking their constitutionals in the Park or on the avenue. Were the dogs not so fitted for the companionship of ladies and children then surely long, long ago they would have been cast aside. It is a case of the survival of the fittest and the proof of the pudding being in the eating.

A club was formed between the late eighties or in the early nineties in the interests of the present Terriers, about which we write with a good deal of appreciation and an appreciation at that begotten of observing other dogs in other countries. If a sojourner does not assimilate his impressions with the country he is in, then surely he is not observant. The four corners of the wind call their breeds; it is believed that the Boston Terrier as he is known to me will eventually be the furore of many a land. The club formed about 1890 a year after asked the American Kennel Club if it could become a member of the parent club in kennel affairs. It wished to call itself the American Bull Terrier Club. That did not suit the taste and requirements of the A. K. C. It must be patent that the keepers of the Stud Books would not think of adding an association to its list that might conflict with other interests already in their volumes of record. Mr. A. P. Vredenburg, Secretary of the A. K. C., suggested to the applicants that the club should call its protege the Boston Terrier and not the American Bull Terrier, or round headed Bull Terrier. Boston Terriers were admitted to registration on February 27, 1903, on the understanding that only those dogs eligible for registration had approved pedigrees of three generations.

And so the Boston Terriers grew and grew. They are as popular in New York as they are in Boston. They are liked as well in the West of this continent as they are in the East. Personally I have seen them in Europe, Africa, Australia and America, and on each continent in turn.

DOG SMUGGLERS.

Within the last three months no fewer than 270 dogs have been shot by the Italian customs officers on the Swiss-Italian frontier, while in the act of smuggling tobacco, sugar and salt from Switzerland.

The fact that these articles are heavily taxed in Italy has led to a great deal of smuggling, especially of tobacco, and the Italian Government has fenced off the frontier with high strips of wire netting, of which the gates are fitted with alarm bells, while customs officers armed with rifles are on guard every hundred yards or so. It has thus become almost impossible for men to carry on smuggling without being caught, and consequently they have taught dogs to do the work.

The animal is first taken to an Italian village near the frontier, where he is petted and well fed. After some weeks of this the dog is taken to the nearest Swiss village, where he is half starved and where a man in the uniform of an Italian customs officer gives him an occasional beating. After a few days of this treatment a parcel of tobacco is fastened to the dog's collar and he is set free. He immediately makes for the frontier to reach his home on the Italian side, and when he catches sight of an Italian customs officer he remembers his beatings and does his best to avoid coming near him. The dog wanders up and down the wire fence until he comes to one of the spring gates, which he pushes open. A bell tinkles and the customs officer immediately fires at the dog; but if he misses the animal the smuggled goods cannot afterwards be impounded, for all goods that have once got over the frontier are considered as having paid duty. After a dog has been shot at two or three times, and has got away, he becomes extremely wary and will wait until the officer is at the furthest end of his "beat," and will then endeavor to pass the spring gates with as little effort as possible so as not to set the bell ringing.

Henry L. Betten will judge the trials near Bakersfield next month. The opening stake will be the Derby, the All-Age, Members and Champion stakes will follow in the order named.

The Sabine Kennels, Orange, Tex., have sold Sabino Baritone to Mr. D. C. McElvoy of St. Clair, Mich. Baritone is strong in stud. On breeding and type he should attract the attention of Fox Terrier fanciers.

The Pacific Advisory Board were to hold a meeting in this city on Thursday evening. Some interesting developments in regard to false pedigrees were expected.

The fact that there is about 1,000 Boston Terriers in New York City, and some good ones among them, too, has given promise of the early organization of a big specialty club for the breed in that city.

The rumor is current that Fox Terriers at Providence next month will be judged Major G. M. Cornochan. Mr. Cornochan judged in this city in 1902.

Kansas City fanciers are preparing for a strong show this spring. A feature of this show should be Setters and Pointers, for there is a large number of sporting dogs owned in that section. Mr. H. B. Hungerford, a well-known Collie fancier, residing at 3848 Independence Boulevard is devoting much effort to the proposed exhibition.

Mr. Stanley Lomas is comfortably located at present on Staten Island where he has the Wandee Kennels string in hand for the Eastern shows.

Rahy Gailliard, a Fox Terrier picked up in Ireland some time ago by Mr. George Raper for, it is said, $50, is a dog which is engaging the interested attention of the fancy who favor this breed most.

Duck Hunting Good.

The recent cold weather has enabled local duck hunters to enjoy better shooting than has prevailed since the opening of the season. Last Sunday on the Sonoma, Suisun, Petaluma and Alameda marshes limit bags were plentiful. Canvasback ducks were in appreciable evidence along with the other varieties.

As a refutation of the claimed decrease of migratory ducks in this State, the Sacramento and Yolo basins have been the resort for over two weeks of millions of wild ducks. The birds were, according to the statement of observers who can go back thirty or forty years, as numerous as at any season in "the old days."

The reason for this is simple enough. The floods and freshets had broken down the levees, flooding thousands of acres of reclaimed lands, creating hundreds of islands and innumerable ponds and vast overflowed stretches, a condition for feeding and refuge that will attract the ducks, the absence of which conditions cause the birds to eschew an erstwhile good hunting district.

U. M. C. Again Wins.

The recent tournament of the Eugene Gun Club held at Eugene, Oregon, on Nov. 24th, was a decided success in every particular—the weather was clear and bright and the attendance large. Too much praise can not be given the committee having the shoot in hand, as nothing was left undone by those gentlemen to make the event one to be remembered, a fact which was greatly appreciated by the contestants as well as visitors during the day. The grounds are splendidly located and with the excellent weather in addition to the faultless arrangements for the day's pleasure, a happier lot of shooters never congregated to test the skill of their marksmanship with a gun. There was a predominance of U. M. C.'s "Magic," "Monarch" and "Majestic" shells used. Maurice Abrahams of Portland, Or., won high average making 92% using U. M. C. shells, followed by J. E Vaughn of Los Angeles with 90%. R. C. Shelton was third high average with U. M. C. shells making 87%, and Geo. T. Hall of Eugene made fourth high average shooting a Remington shotgun.

Averages Reported.

Capron, Ill., October 26th, J. R. Graham of Ingleside, Ill., first amateur average, shooting "Schultze."

Rockford, Ill., November 12th, J. R. Graham of Ingleside, Ill., besides winning first general and first amateur averages, won the Diamond Badge Contest, 49 out of 50, and finished the program with a run of last 78 straight, shooting "Du Pont."

Milford, Ill., November 15th, F. H. Lord, first general average, 118 out of 140, shooting "Schultze." Art McKinnis of Otterbein, Ind., shooting "Du Pont" and J. G. Miller of Oxford, Ind., shooting "Infallible," tied for first amateur and second general averages, 117 out of 140. R. D. Keane of Watseka, Ill., second amateur and third general average, 103 out of 140, shooting "Infallible."

Ottawa, Ont., November 17th, Ed. G. White of Ottawa, first general average, shooting "Du Pont." Geo. Easdale, of Ottawa, second amateur average, shooting "New Schultze."

Tampa, Fla., November 17th and 18th, D. H. McCullough of Charlotte, N. C., on the 18th won the Peters Cartridge Company's trophy with 49 out of 50, shooting "Infallible." He also won third amateur average, 345 out of 400.

Middletown, N. Y., November 18th, J. S. Fanning first general average, 139 out of 155, shooting "Infallible." L. H. Schortemeier of New York City, first amateur average and third general average, 133 out of 155, shooting "E. C." Frank E. Butler, second general average, 137 out of 155, shooting "Schultze."

Tampa, Fla., November 17, 18 and 19, Lon Fisher of Hebron, Ohio, first general average and first amateur average, 373 out of 400, shooting "Du Pont." Walter Huff, second general average, 373 out of 400, shooting "Du Pont." H. D. Ereeman of Atlanta, Ga., third general and second amateur average, 354 out of 400, shooting "Du Pont." In the special 100-target race on the 17th, Mr. Fisher won the trophy paesented by the Tampa Rod and Gun Club with a score of 95. On the 18th inst. H. D. Freeman tied with Mr. Fisher in the 50 target race for the W. R. A. Co's prize with 47 out of 50, Mr. Freeman winning on the shoot-off. On the 19th, live bird day, the silver trophy offered by the Tampa Rod and Gun Club was won by Walter Huff, with a score of 15 straight.

A Strong Point.

One thing in particular a sportsman wants when he has a good shooting gun is a gun with the stock and fore-end so made that the wood is not affected by the wet.

The new stock fastening of the Ithaca gun makes it *impossible* for the wood to swell away from the frame in damp weather. Duck shooters will much appreciate so important a feature in a gun.

The Ithaca guns are made any weight, drop or choke, without extra charge. Send to your dealer for a catalogue and ask for special prices.

THE FARM.

State Veterinarian's Report.

In bis report to the Governor, Dr Charles Keane, State Veterinarian, gives a statement of the various diseases prevalent among the stock of the State and their treatment and remedy In speaking of his call recently issued to the veterinarians of the State looking to the forming of a State association, he says:

"My object in planning this association is to organize in our work for the eradication of contagious diseases. Also to make the work systematic by formulating as near as possible uniform county laws in these matters. Many other benefits may be derived by the counties as well as the State at large by an organization of this nature. I am pleased to state that the formation of the association is meeting with tbe hearty approval of all concerned."

After outlining the fact that the cattle interests are so material and widespread over the State as to make it impossible for one man to meet all the demands made on tbe office, Dr. Keane recommends that two assistants be appointed, one to serve in the north and the other in tbe soutb of the State, and that an appropriation be made to pay their salaries and expenses. In giving his reasons, the report says:

"The large extent of territory in California and the vast amount of same which is given over to the raising of livestock, together with the widespread distribution of contagious diseases, makes it impossible for one man to properly cover the field, and in consequence considerable dissatisfaction rightfully exists among stock growers. Our large livestock interests and the public health demand all the protection the State can give. Under the present conditions the State Veterinarian is called to one section of the State in his line of duty, and while there numerous others are besieging his office for aid in other remote sections. By the time he is able to attend to these later, calls, the stockman has suffered severe loss, and to a certain extent he justly complains of our tardiness. In the employment of two assistants, as suggested, one in the north and the other in the south, whenever the State Veterinarian is unable to answer an urgent call he can send an assistant, who would subsequently make his report to the officer in charge of this work. The remuneration of these assistant veterinarians could be made per diem salary for work actually performed and his actual traveling expenses."

The report recommends that the State law be amended to require all live-stock entering the State for feeding or grazing purposes be accompanied by a certificate of health from an official veterinarian of that State or Territory or from an Inspector of the United States Bureau of Animal Industry.

S. B. Shilling of Mason City, Iowa, President of the National Dairy Union, had a fine herd of milking Shorthorn cows a few years ago, but he admired the beef type, as in his eyes they were a thing of beauty. Accordingly he used the best beef sires he could find with these cows, and continued to breed in this way until now he has some of the finest types of the beef form but gets little milk. One magaificent old milker, the very perfection of the old-fashioned milking Shorthorn, brought him a heifer that gave scarcely enough milk for her calf. Some of our Western farmers are in the same predicament.

—o—

There is a great deal of money to be made in not speculating on results in poultry breeding.

A Few Random Thoughts.

The greatest objection to cheap stock is that it usually makes the breeder who buys it feel the same.

Patience is a mighty good thing to have on tap at the poultry farm, but too much of it is likely to degenerate into tired feelings.

Nothing pleases one of your oldtime poultrymen so much as the inability of others to produce birds that will score like his.

Be honest, not because it is the best policy, but because it is comparatively easy when you get used to it.

If some poultrymen would spend half an hour thinking up a fresh ad. to sell stock, their space would pay better dividends.

The best time to lecture a man on the evils of poultry keeping is directly after the hens have scratched all the seeds out of his newly-made garden.

The breeder who runs things on the principle, "Do others as they would do you, only do it first," is not booked for a very long or successful business career.

Many a man gains wealth by acting contrary to the advice he gets from the majority of the breeders he happens to meet.

In figuring up what your business might have been, you will find a good deal more comfort in looking down than up.

Never become too enthusiastic in praise of your competitor. It is good Christianity, but poor business policy. People may take you at your word.

The poultryman who can fool people even a part of the time about his stock and business methods is going to be kept busy.

Another breeder has no doubts about your being a good fellow if you can remember the place where he didn't lose prizes to some other strain.

The biggest gold brick a poultryman can buy is the experience he pays for but cannot use.

When another breeder tells you that your birds are better than his, watch out. He wants something.

When a sick fowl is found it should at once be separated from the remainder of the flock. Many poultry diseases are contagious.

Every poultryman should have a little egg laying contest of his own. Use trap nests or learn in some way which are the best layers. Send the drones to market. Poor layers take up valuable room and cut down the profits.—*F. T. Johnson in Successful Poultry Journal.*

According to the *Scottish Farmer* the price of £2707 [$13,525 U. S. gold] is just reported as having been given for a Shorthorn bull in the Argentine. This was for Elvetham Conqueror, the yearling belonging to Lord Calthorpe, which was first in his class at the Royal English show this year. He was purchased by Mr. Alexander Bruce for South America, whither he was transported, and whence he has now changed hands at the figure mentioned. Elvetham Conqueror was one of the sensations of the Royal, being a beautifully wide, deep, thick roan, which commanded the attention of all critics. He is after the Bapton Manor bred bull, Bapton Glory. It may be noted that this figure surpasses the great price paid for the Newton bred bull, Newton Stone, which changed hands in the Argentine this year at £2600 [$13,000 U. S. gold].

—o—

A decision of the United States Supreme Court lately handed down still farther affects the oleomargarine industry. In effect the court says that anything added to oleomargarine for any purpose which has any affect on the color of the product renders the oleomargarine liable to the 10-cent tax per pound.

—o—

Because new recruits are constantly being added to the ranks of dairymen, the same questions are constantly recurring and need to be answered.

Turning Off Old Cows.

Those who keep many cows are sometimes at a loss to know whether it is better to turn them off for what they can get for them in the fall or to try to fatten them after they have become dry. In answering this question, *The Farmer* says, much depends on the character of the cow and something depends on the way in which the cows have been fed during the summer.

Cows that have been properly fed will not be in a very lean condition of flesh. We know of course that free milking cows will not keep in flesh like cows that milk less freely, but if cows are fed food that will produce abundant milk and that will at the same time keep up a necessary amount of flesh they will not be really lean when they come to be dried.

It may be well when cows are thus fed to turn off animals of the strictly dairy breeds as soon as they have become dry. It may be that the most money made from them will be obtained by selling them for what they will bring, even though the price should be as low as $25 per head. But this will not hold true of the dual-purpose types, nor will it hold true of Holsteins. It will usually pay to finish these animals after they have ceased to produce milk. The degree of the finish to which they should be brought will depend somewhat on the price of meat. When prices are running high it will doubtless pay to bring them to a good finish.

—o—

Diseases of Hogs.

Young animals are more subject to attacks of contagious or infectious diseases than old, says Dr. Billing of Purdue University. White scours, suppurative joint diseases and infectious sore mouths are diseases of the first few days or weeks. Thumps occur early. Cholera occurs with much greater virulence in those under six months of age than in the older. Lung worms or whooping cough occurs between two and four months. Swine plague attacks the older hogs. Trichinae likewise more often occurs in mature animals. As a rule the young are more subject to acute diseases and the old to chronic troubles.

Blessed is the man who has a good flock of mutton sheep and knows how to take care of them. They are sure money makers; just as sure as government bonds or first-class railroad bonds, and paying three or four times the interest. The farmers who through evil report and good report has held on to the sheep, not becoming scared at any temporary depression or threat of tariff removal, or anything else, has made good money right along and will make more money than ever in the future. His farm is comparitively free from weeds wherever the sheep can graze, and his land is constantly growing richer.

—o—

No man can breed beef cattle, mutton sheep or swine in the wisest way who does not attend the show and study and compare breeds and types. No man can feed and sell to the fullest degree of success, who is unfamiliar with the butcher beast, a model of fitness in the show ring, or who is a stranger mid the pens of the yards, where quality and character make values.

—o—

It is not enough to have good cows. Like well selected trees, no difference how good they are, unless planted where the conditions are right to develop their particular possibilities, they will not bear the best fruit.

—o—

It is claimed that while the first cross between two good breeds produces good results, a second cross is not profitable. Therefore, the offspring of animals crossed should not be used for breeding purposes.

The Head of the Herd.

It is an old saying that the bull is half the herd. Do we really believe it? "Plenty of men," says Professor Fraser of Illinois, "will pay $500 or $400 for a good registered cow, yet the owners did not expect to pay more than $200 for a sire to head this same herd."

Does not that fact show that but few men value the sire as highly as they do the dam? Yet she has but one calf a year, while he is the sire of many.

It often takes a statement like this to to show us what we really do believe. Yet the most famous and successful breeders have always been men who paid their highest money for sires rather than dams in nearly all breeds of domestic animals — *Holstein-Friesian Register.*

The Milk Veins.

The so-called milk veins found along the stomach of the cow should be very tortuous, says *American Cultivator.* They wind about on the belly and pass into the body through orifices in the rear of the fore flank. Their duty is to convey the venous blood to the lungs for purification; hence the larger the vein and the greater its ramifications the better indication it is that the circulation of the blood through the udder is very large, and naturally the larger the circulation of the blood the greater will be the milk production, because milk, after all, is really a production of the blood.

Many a cow is found fault with because the butter does not come, when probably the cream is not properly ripened, or the temperature is not right. When enough cream has been gathered for a churning, it should be exposed to a fairly warm temperature, and stirred occasionally until it reaches a proper stage of ripeness. Little is gained by haste in churning. Under proper conditions butter ought to come in due time.

—o—

Dehorning has evidently come to stay. The pain in the operation is doubtless over-estimated, and the risk is very small. The worry and danger to their mates, from animals having horns is much greater than the pain in taking the horns off, or in preventing their growth on the calf. There is almost a unanimous opinion in its favor.

—o—

A writer suggests that when dairymen get down to real, earnest work they will have summer silos, as well as winter silos, and when the pastures fail, they will be able to feed ensilage, and thus be comparatively independent. This probably will be better than soiling crops, as soiling crops are uncertain.

—o—

It really would be a good plan for every farmer to be acquainted with the anatomy of the animals on his place, so that when butchering time comes he would be able to make all of his cuts intelligently. There would be less waste, and he would be able to do it with greater ease to himself.

—o—

The period of lactation has something to do with the time it takes to churn. The longer period a cow has been milked the smaller are the butter fat globules, and the more slowly they gather to make butter, and the longer it may take to churn.

—o—

Co-operation among dairymen in Denmark is reported to be a grand success. In 1903, she exported 222,000,000 pounds of butter from 1,000 butter co-operative exporting societies.

—o—

When a cow kicks, and keeps on kicking, some one is at fault. She should have been so handled when she was a calf that she would have taken milking as matter of course.

Sober up on Jackson's Napa Soda.

Alfalfa for Bone and Muscle.

Accurate tests have not been made in regard to the influence of alfalfa in developing bone Wherever tests have been made in feeds rich in both protein and mineral matter, it has been shown that such feeds greatly increase the development of bone. Alfalfa is exceedingly rich in both protein and mineral matter. A ton of alfalfa hay furnishes 51 pounds of potash, 44 pounds of lime and 11 pounds of phosphoric acid, while a ton of corn supplies 8 pounds of potash, 3 pounds of lime and 14 pounds of phosphoric acid. Besides being rich in protein and mineral matter alfalfa is bulky, a very desirable quality when young animals are forced during the bone forming period. It is cooling and laxative.

Lime and phosphoric acid are the two mineral elements used in the production of bone Potash is of especial value as an agent in the rapid formation of new tissues, both bone and flesh, and alfalfa, rich in potash as well as other mineral matter, has the composition needed for the rapid formation of bone. To produce the full development of bone the work must be begun before the animal is born and the dam fed plentifully with bone producing feeds during the entire time. The composition of alfalfa fits it for this purpose, and its cooling and laxative effects and its bulky character make it still more valuable.

On many farms alfalfa hay is the only food furnished to brood sows. When spring litters come following these winters of alfalfa feeding the pigs are unusually large and strong, the protein and mineral matter having developed strong bone and large bodies. When alfalfa hay is fed summer and winter to cows the beneficial effect on size and vigor of the calves may be plainly seen. In pushing pure-bred calves for size and bone we induce them to eat all the alfalfa hay possible, as soon as they are old enough to safely handle it, because the alfalfa hay develops bone and muscle.

Hundreds of thousands of dollars have been spent for imported stallions because of their great bone development. Is it not reasonable to consider that a few generations of full alfalfa feeding, kept up the year round, will make our horses what they should be in this respect? A prominent breeder and exporter of Percheron horses says that for the past twelve years his pure-bred mares had either alfalfa pasture or hay every day. He says the American-bred colts from these alfalfa-fed mares have developed into heavier horses, larger boned than their imported parents. Twenty-five years of observation of horse breeding has shown that the greater part of the benefits that might be secured by the use of heavy-boned stallions is lost because mares and colts are not properly treated. Full feeding of alfalfa to mares and colts will enable us to secure much greater influence and improvement from these sires.—*H. M. Cottrell.*

Model Dairies.

These are model dairies where milk is produced and handled that is as clean and wholesome as milk can be made; the cows are in good condition, free from disease in any stage, and frequently examined by a skilled veterinarian, who removes from the herd any suspected animals; none but wholesome feeds are used; the stable is abundantly lighted and well ventilated, often thoroughly cleaned and kept in a correct sanitary condition; the cows are kept clean and comfortable; the attendants are healthy and cleanly; all utensils are sterilized daily; great care is taken to protect the milk from contamination; the milk is promptly cooled, and it should contain less than one-thousandth part as many bacteria as are found in much of the milk regularly sold in cities and towns.

A model dairy does not require a large outlay of capital, but it requires a keen intelligence and unremitting care in its management. Some increase in running expense is necessary, as would be expected. Such dairies are few, but their number is slowly increasing. One of the chief reasons why they do not increase more rapidly is that the public does not appreciate the advantages of their product and seems unwilling to pay a slightly advanced price for it. If the question were generally understood, there would be such a demand for high-grade milk at fair prices that model dairies would quickly come to be the rule instead of the exception. When consumers are willing to pay enough to encourage dairymen to exercise close supervision over their cows and to take all of the precaution necessary to insure milk of high quality and purity, from both chemical and bacteriological standpoints, and will insist on having such milk, then that kind will be amply supplied. It is the duty of dairymen themselves to help bring about this condition. Milk is cheaper than most other foods (even when it is sold at an advanced price made necessary by extra care in its production), and for this reason, as well as others, it is well suited to form a large part of the dietary.—U. S. Department of Agriculture.

Young Animals in Demand.

In order to supply the demands of the present day market for young animals it is necessary to employ improved blood says St. Louis *Republic*. It is impossible to make a scrub steer satisfactorily thick at the age of twenty or twenty-four months, although this may be done with any of our recognized beef breeds, even if the feeder is possessed of only average skill.

In the future we believe that the market will demand even younger animals than it does at present, and in view of this it becomes more and more necessary for men to build up their grade herds by the use of pure breeds or to raise the pure breeds out and out. The difficulty of making beef raising or pork raising pay on $100 land must be solved by raising animals that mature early and feeding them in such a way that when they are marketed they are just what the market demands.

All animals seem to be sociably inclined. They suffer from loneliness. There are instances where horses become attached to each other, and where they love the companionship of a dog, a goat, a pig or a cow. Where such is the case they should have some such companion while in the stable. Solitary confinement is a disadvantage to them.

The wise breeder is the one who is ever on the alert to learn something useful and profitable about his business.

Importance of Form in Hogs.

While symmetrical proportions in whatever animal form are pleasing to the eye, they really occupy a more important office in that they are true indication of utility. Perhaps no more apt illustration of this truth can be pointed to than an incident which occurred at the St. Louis show grounds says *Twentieth Century Farmer.* In the class for championship of fat barrows over one year, there was a fairly good showing, which included only winners of first honors in each of the different breeds. The competition was quickly narrowed down to a Poland-China, a Berkshire and a Yorkshire, the final decision in favor of the Poland-China.

Judge Ferguson, at the conclusion, gave his reasons for this disposition of the ribbon, and in these remarks were included information as to the general character of hog demanded by the packer that should be kept in view by farmer and breeder alike. He explained that the winning hog excelled in having more even side and back lines and a more uniform covering of flesh, less thickening of front shoulder, less flabbiness in belly and flank, better spring of rib, deeper ham and a makeup that made a carcass which promised to cut up to better advantage and with a lesser proportion of waste than did the others. He called attention to the importance of a straight or slightly arched back, and give his objections to a back that bumps over the loin. His one criticism was that the animal lacked in length, and this criticism was mainly in line with the ideas of breeders present.

The quick growing, early maturing hog, that which is most likely to please the eye by its smoothness and even proportions, is the one that commands the highest price at the markets.

Jackson's Napa Soda untangles the feet.

FOR SALE.

VILLON 38090, BAY COLT FOALED JUNE 19, 1903. sired by McKinney 2:11¼, dam by Nearest, brother to John A. McKerron 2:04½; 2d dam by Anteeo 2:16½; 3d dam by Venture, sire of dam of Directum 2:05¼. Also ten registered mares and fillies, mostly bred to good stallions—four to Kinney Lou 2:07¾. Correspondence solicited. This sacrifice is due to age and infirmity of owner. G. B. BLANCHARD, San Jose, Cal.

I hereby certify that I examined one bay colt, coming two years old, for G B. Blanchard, and that I find him sound and pronounce him all right. Name of colt VILLON 38090.

FRED H. CHASE & CO., Live Stock Auctioneers

1732 MARKET ST., SAN FRANCISCO,

STATE AGRICULTURAL SOCIETY

OCCIDENT STAKE OF 1907

TROTTING STAKE FOR FOALS OF 1904

To be Trotted at the California State Fair of 1907. Entries to Close January 1, 1905, with L. R. MILLER, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which $10 must accompany nomination; $15 to be paid January 1, 1906; $25 to be paid January 1, 1907, and $50 thirty days before the race. The Occident Cup, of the value of $400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern.

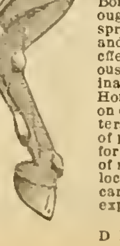
Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1907 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1905.

L. R. MILLER, Secretary. B. F. RUSH, President.

"SAVE-THE-HORSE" Registered Trade Mark SPAVIN CURE



$5.00 per bottle Written guarantee with every bottle, as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Positively and Permanently Cures Bone and Bog Spavin, Ringbone (except low ringbone), Curb, Thoroughpin, Splint, Capped Hock, Shoe Boil, Wind Puff, broken down, sprained, injured and ruptured Tendons. The fire iron is uncertain, and invariably only aggravates disease or injury; blistering is less effective—both necessitate laying horse up. Mercurial and poisonous compounds produce irreparable injury. "Save-the Horse" eliminates all these factors. Cures without scar, blemish or loss of hair. Horse can be worked as usual. Copy of guarantee, valuable booklet on diseases and injuries affecting horses, and copies of personal letters from bankers, noted trainers, manufacturers and business men of prominence the world over, telling of the wonderful cures it made for them, sent upon application. We advise frankly of possibility of remedy in any specific case. Give explicit particulars; state age, location of swellings, lameness, and the way the horse holds and carries the leg. $5 00 per bottle at all druggists and dealers, or express paid. TROY CHEMICAL CO., Manufacturers, Binghampton, N. Y. (formerly of Troy, N. Y.)

D E. NEWELL, Pacific Coast Agt, 519 Mission St., San Francisco.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puff and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O

PACING 2:11 1-4 **RITA H.** TROTTING 2:14 1-4

FOR SALE.

RITA H. is by McKinney 2:11 1-4, dam Smut by Prompter.

She is a dark brown mare, stands nearly 16 hands high and weighs in racing trim 1050 lbs. In 1903 she started eight times on the Washington and Oregon Circuit, won her first seven starts and only lost four heats during the entire circuit, getting a pacing record of 2:11¼. In 1904 she was converted to the trotting gait and proved herself a consistent performer, winning most of her races in fast time and getting a trotting record of 2:14¼. She is six years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Her owner has driven her in 2:12½ (pacing) in the Los Angeles Driving Club races, she having won all but one in which she started. This mare is all right and there is not a thing the matter with her, but my business demands are such that I cannot afford to devote any time to racing. For prices and further particulars address

BYRON ERKENBRECHER,
301 Currier Bldg, Los Angeles, Cal.

FOR SALE.

ONE OF THE BEST BRED TROTTING FILLIES on earth. Perfect in every respect. Sired by one of California's greatest sires. First, second, third and fourth dams are producers of early and extreme speed, and have twenty in the list. Combines the three great strains—Electioneer, Wilkes and Nutwood. She is the acme of scientific breeding, will make a fast trotter and worth her weight in gold for a broodmare. Fifteen great dams in her pedigree.

Also, Princess Leola, gray mare 5 years old, 15 2¼ hands, sired by Leonel 2:17¼; 1st dam Lady Dwyer by Menlo 2:21¼, son of Nutwood 2:18¾; 2d dam Silver, dam of Marin Jr. 2:13 and Hattie F. 2:18 by Silverthreads, son of The Moor; 3d dam Gertrude, dam of California Maid 2:23½ and Native Son (3) 2:29¾ by The Moor. A splendid roadster and a promising young broodmare; has had one foal; never trained.

And Juanita by Gen. Benton 1755; 1st dam Juniatta, dam of Elector 2:25 by St. Clair 656; 2d dam Maid of Clay (dam of 4 in 2:30) by Henry Clay 8, in foal to Lecco 2:09¾.

A beautiful yearling filly by L. W. Russell, and a bay weanling colt by the great Searchlight 2:03¼, a perfect counterpart of his illustrious sire. Both these youngsters are out of Juanita, and all are standard bred and eligible to registration. For further particulars address

C. C. CRIPPEN, Mayfield, Cal

Two Prince Airlie Stallions For Sale.

MILBRAE 2:16 1-2 by Prince Airlie 28045 by Guy Wilkes 2:15¼, sire of Fred Kohl 2:07¾, Hulda 2:08½, Seymour Wilkes 2:08½; 1st dam Fearless by Fallis 4781 (rec. 2:23), sire of John R. Baldwin 2:17¼, Fallacy 2:17½, Falrose 2:19, and dam of Janice 2:08¼; 2d dam Jean Perault by Signal 3327. MILBRAE has been in training just one year, getting a trotting record of 2:16½ (trial 2:13) with first half in 1:05, a quarter in :31¼. This is no measure of his speed. He is a seal brown, 16 hands, weighs 1200 pounds, 6 years old.

MENLO BOY 37401 by Prince Airlie 28045 by Guy Wilkes 2:15¼; 1st dam Signal by Del Sur 1098, grandam Lady Signal by Signal 3327. With very little work he has trotted in 2:29¼, quarters in :35. He is a brown with white pasterns, 16.1 hands, weighs about 1170, and 5 years old.

For further information apply to

P. H. McEVOY, Menlo Park, Cal

FOR SALE.

ONE OF THE GRANDEST LOOKING AND finest bred young Stallions in California. He is 2 coming 3 years; chestnut with star, and one pastern white: good mane and tall; stands 15½ hands high; all sound, not a blemish; well broken; never worked for speed: a trotter. Sired by Nearest 2:22, brother to John A. McKerron 2:04½. First dam Princess Airlie by Prince Airlie; seconn dam Minnie Princess, dam of Leonora 2:25 by Nutwood 2:18¾; third dam Belle by Paul's Abdallah; fourth dam Kate Crockett by Langford by Belmont: fifth dam Fanny by American Boy Jr. Prince Airlie by Guy Wilkes 2:15¼; first dam Chantilly (4-year-old trial 2:19¼, dam of Chanty (2) 2:24, Cascade 2:14¾) by Nutwood 2:18¾; second dam Crepon (dam of Lovelace 2:20, Betsy Britton 2:20¾, Brilliantine 2:29½) by Princeps: third dam Crape Lisse (dam of King Rene Jr. 2:17, Balzarine 2:27) by George Wilkes 2:22; fourth dam Tarlton mare, dam of Tarlton 2:30 Only reasons for selling is that I have another colt bred the same way and am overstocked. Address

T. W. BARSTOW, San Jose, Cal.

STALLIONS FOR SALE.

Dictator Wilkes, son of the great Dictator and Manola by Geo. Wilkes, second dam the great broodmare Lizzie Brinker by Drennon. DICTATOR WILKES is a dark bay horse with size, style and excellent conformation. He stands 15 3 and weighs 1100. Was never worked for speed except a little as a two-year-old, when he was very promising. He is the sire of Monroe S. 2:13¼ and other very fast trotters and pacers.

Temescal, son of Palo Alto 2:08¾ and Telie (dam of Truman 2:12 and two others in the list) by Gen. Benton. TEMESCAL is a handsome chestnut, stands 16.2, weighs 1250 pounds, has an excellent disposition and size and style. But one of his get has ever been worked, a filly out of a Dexter Prince mare, and she shows much speed and great promise.

For prices and further particulars address

lubricates the mechanism, prevents rust on the metal parts and cleans and polishes the stock. For cleaning out the residue of burnt powder, especially smokeless powder, it is unequaled.

3. W. COLE & CO., 128 Washington Life Bldg. New York City

CAN YOU ENJOY A SQUARE MEAL?

Do you sit down at the table with a fine appetite intending to enjoy your meal immensely and after a few mouthfuls give up in despair? That's a typical "well along" case of indigestion or dyspepsia. Hundreds yes, thousands are in the same boat and are willing to do almost anything to be as they used to—healthy, well and strong with a good sound stomach.

You cannot force your stomach to do work that it is unwilling to do. It has been tried time and time again, with the same results always. The stomach is a faithful organ, but when pushed beyond, and exerted to the utmost, it rebels. Some stomachs are stronger than others, but all have their limit and when the limit is reached it is unwise to attempt to force it into doing further work.

The best and nickest cure offered to that big army of sufferers is

DR. SPENCER'S ENGLISH DYSPEPSIA WAFERS.

If you haven't heard of this cure before, you have been needlessly suffering, for this medicine *will* cure you—cure you as sure as there's a sun above. Would you spend 50 cents if you thought there was some hopes. We know you would, and therefore tell you sincerely that D. S. E. W. *will* cure you.

The curing powers of these wafers are very simple to understand. They are natural in their workings and effects, taking up the work of the worn and wasted stomachs, digesting the food thoroughly and completely.

British Pharmacal Co., Milwaukee, Wis., Distributors.

A sweepstakes for two-year-olds, colts and geldings $10 to accompany nomination, and $30 additional to start. $1000 added, of which $300 to second and $100 to third, fourth to save starting money. **Four furlongs.**

THE ARDELLE STAKES—For fillies (foals of 1903). **Estimated value $2200.** $1000 added. ($10 entrance) For 1905. A sweepstakes for two-year old fillies. $10 to accompany nomination, and $30 additional to start. $1000 added, of which $200 to second and $100 to third, fourth to save starting money. **Four furlongs.**

THE MEMPHIS STAKES—For two-year-olds (foals of 1903). **Estimated value $1000.** $2000 added ($10 entrance.) For 1905. A sweepstakes for two-year-olds. $10 to accompany nomination, and $50 additional to start. $2000 added, of which $250 to second, and $150 to third, fourth to save starting money. 3 lbs. below the scale. The winner of two races other than selling of the value of $1000 each to carry 3 lbs. penalty. Non-winners of a race other than selling of the value of $500, or two races other than selling of any value, allowed 5 lbs. Maidens allowed 10 lbs. **Five furlongs.**

THE HOTEL GAYOSA STAKES—Estimated value $2000. SUBSCRIBED TO BY HOTEL GAYOSA. For foals of 1902 (three-year-olds of 1905). $1000 added. ($10 entrance.) For 1905. A sweepstakes for three-year-olds (foals of 1902) $10 to accompany nomination, $50 additional to start. The Club to add $1000, of which $200 to second, and $100 to third, the fourth to save starting money. A winner of a three-year-old stake race, when carrying their weight [colts 122, geldings 119, fillies 117], 3 lbs. penalty; of two or more 5 lbs. ALLOWANCES—Beaten non-winners in 1905 allowed 5 lbs.; if unplaced, 8 lbs; others never having won a two or three-year-old stake race (selling stakes excepted), allowed 7 lbs.; if such have never won a race of the value of $400 to the winner (selling stakes and purse races excepted), allowed 12 lbs.; beaten maidens, 20 lbs. Allowances not cumulative. **One mile.**

SCALE OF THIS RACE.	Colts	Geldings	Fillies
Those entitled to no allowance	122	119	117
Winner with weight up of one 3-year-old stake	125	122	120
Winner with weight up of two 3-year-old stakes	127	124	122
Beaten non-winners placed in 1905	117	114	112
Beaten non-winners unplaced in 1905	114	111	109
Non-winners of a 2or 3 year-old stake (selling excepted)	115	112	110
Non-winners of a race of the value of $400 " "	110	107	105
Beaten maidens	102	99	97

FOR THREE-YEAR-OLDS AND UPWARD

THE MONTGOMERY HANDICAP—Estimated value $5500. Silver cup or plate to winner. Handicap $3000 added. (Entrance free.) For 1905. A handicap sweepstakes for three-year-olds and upward. $50 each, half forfeit, or $10 if declared. $3000 added, of which $400 to second, and $250 to third, the fourth to save stake. In addition to the stake, the winner will receive a valuable silver cup or plate, donated by the Club. Weights to be announced before 9 a. m., February 1st and declarations to be made on or before February 15, 1905. All declarations void unless accompanied by the money. The winner of a race, after the weights are announced, of the value of $1000 to the winner, or two races of any value, (selling purse race excepted), 5 lbs. penalty; such penalty not to exceed scale weight if handicapped at less; those weighted at scale or more than scale weight by the handicapper will not be subject to a penalty. The scale to be Western Jockey Club Scale. This race to be run the opening day. **One mile and one-sixteenth.**

THE PEABODY HOTEL HANDICAP. Estimated value $3000. Subscribed to by Peabody Hotel. Handicap. $1500 added and the silver cup or plate (Entrance free) For 1905. A handicap sweepstakes for three-year-olds and upward, $50 each, half forfeit, or $10 if declared on or before April 3rd. All declarations void unless accompanied by the money. $1500 added, of which $250 to second, and $150 to third, fourth to save stake. In addition COL. R B. SNOWDEN will add a silver cup or plate, to go to the winner. Weights to be announced two days before the race. **One mile and one-eighth.**

THE TENNESSEE BREWING CO. STAKES—Estimated value $2500. SUBSCRIBED TO BY TENNESSEE BREWING CO. Selling stakes. $1000 added. (Entrance $10.) For 1905. A selling sweepstake for three-year-olds and upward. $10 to accompany nomination, and $50 additional to start. $1000 added, of which $300 to second, and $100 to third, fourth to save starting money. The winner to be sold at auction for $3500 if for less; 3 lbs. allowed for each $500 to $1500; then 1 lb. for each $100 less to $500. Starters and selling price to be named through the entry-box by the usual time of closing for this day's racing, and those so named are liable for starting fee. **Seven furlongs.**

THE COTTON STEEPLECHASE STAKES—Steeplechase. **Estimated value $2700.** $1500 added. (Entrance Free.) For 1905. A steeplechase handicap sweepstakes for three-year-olds and upward. $50 each, half forfeit, or $10 if declared on or before April 3rd. All declarations void unless accompanied by the money. $1500 added, of which $250 to second and $150 to third, the fourth to save stake. Weights to be announced two days before the race. Four or more horses of entirely different interest to start, or the race may be declared off. Starters to be named through the entry-box at usual time of closing the day before the race, and those named are liable for starting fee. **About two miles.**

SPECIAL NOTICE.—No entry will be received for any of these stakes except upon this condition: That all disputes, claims and objections arising out of the racing, or with respect to the interpretations of the conditions of any race, shall be decided by a majority of the Executive Committee present, or those whom they may appoint, and their decisions upon all points shall be final.

The Club also reserves the right to refuse the entries of any person, or the transfer of any entry, and without notice.

THIS RACE COURSE (MONTGOMERY PARK) is, without a doubt, one of the best in America to winter and train the thoroughbred, furnishing first class and most comfortable quarters for both man and horse. On this track the majority of the good two-year-olds of the West each season are developed. Highhall, winner of the American Derby, and Colonial Girl, winner of the World's Fair Handicap, both wintered at this track.

Entry Blanks or any information on application will be promptly furnished by the Secretary.

FRED H. CHASE & CO., Live Stock Auctioneers
1732 MARKET ST., SAN FRANCISCO.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

THE WEEKLY

BREEDER AND SPORTSMAN

F. W. KELLEY, PROPRIETOR.

Turf and Sporting Authority of the Pacific Coast.

—OFFICE—

36 GEARY STREET, SAN FRANCISCO.

P. O. BOX 2300.

TELEPHONE: Black 586.

Terms—One Year $3, Six Months $1.75, Three Months $1

STRICTLY IN ADVANCE.

Money should be sent by postal order, draft or by registered letter addressed to F. W. KELLEY, 36 Geary St., San Francisco, Cal.

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

San Francisco, Saturday, December 17, 1904.

BREEDERS FUTURITY NO. 2 which has a guaranteed value of $6000, will be worth nearer $7000 than the amount originally guaranteed, and it may exceed $7000. Nothing has done so much for the breeding interests of this Coast during the past few years, as these stakes inaugurated by the Pacific Coast Trotting Horse Breeders Association. They have enabled the breeder or owner of a good colt to get back some of the money he has paid out for service fees, feed bills, and training expenses. This year $6000 was divided up between the owners of the winners and in 1905 at least $7000 will be paid out to the owners whose colts finish among the first four in this event. There is a payment of $10 due January 2d on three-year-olds named in the stake to be decided in 1905, and as there is nothing more certain than the fact that only those colts paid up on will win, it behooves every owner to make this payment. A word to the wise is sufficient.

THE OCCIDENT STAKE of 1907 will close for entries January 1st. Breeders should not forget the many rich Occidents that have been decided and brought money and fame to the owners of the colts or fillies that won them. The California State Agricultural Society is just entering on a new lease of life and the brightest pages of its history. The old fair grounds have been sold and the Occident Stake of 1907 will be trotted over a new track that promises to be one of the finest and best appointed in the United States. We advise every owner of a trotting bred foal of 1904 to make an entry in this stake as we believe it will be a very rich one and worth training and trotting for. The winner of the Occident always has about $2000 placed to his credit on this one race, so it is worth trying for. The date of closing is January 1st. Don't forget the date.

THE LAST CHANCE to get the advertisement of your stallion in the Stallion Directory which will appear in the Christmas edition of this paper, expires next Tuesday. Copy for advertisements received that day will be in time, but those received later will be too late. We know of one owner who says that a $3 ad. in the Directory of last year brought two mares to his horse that he would not have received had the advertisement not been published. Any stallion worth breeding to is worth advertising, and the columns of the BREEDER AND SPORTSMAN offer the best place to place your horse's qualification before the public.

THE FIFTEENTH ANNUAL CONVENTION of the California State Veterinary Association was held in this city on Wednesday of this week. A clinic was held during the afternoon at which several very interesting operations were performed, and in the evening a banquet was held and several papers read. Dr. Carroll, of Chico, read a paper on the "Mallein Test for Glanders," and Dr. H. A. Spencer, of San Jose, made some very interesting remarks about "Odd Cases." The officers elected for the coming year were: R. H. Archibald, president; J. B. Bloomer, vice-president; P. H. Browning, secretary; W. F. Egan, treasurer; H. A. Spencer, E. J. Creely and David Fox, board of examiners.

THE DEMAND for draft stallions will not be supplied this year, but Singmaster & Sons of Keota, Iowa, who have imported and bred Percherons, Shires and Belgians for many years, can supply high class stallions to those who want them. Mr. C. O. Stanton has charge of their California agency which is at 127 St. John street, San Jose. It will pay to call and inspect the stock there if you need a good stallion.

JAMES BUTLER'S CASE which was to have come before the Board of Review of the National Trotting Association at New York this month, has been postponed until May next. Mr. Butler who is proprietor of East View Farm, employs Monroe Salisbury as manager of his racing stable. Mr. Salisbury has been under suspension for unpaid entrance fees for several years, and when the Butler horses reached Hartford on the Grand Circuit, Secretary Gocher would not permit them to start until Mr. Butler had paid the Salisbury suspensions, which he did under protest. The claim is that under the rule Mr. Butler's horses are not entitled to any of the $30,000 won on the circuit previous to the payment of the claim as Mr. Salisbury was in control of them. Butler has secured the services of Gen. B. F. Tracy ex-Secretary of the Navy to look after his interests in this case which is the talk of horsedom from the Atlantic to the Pacific.

CHAMPION STAKES for Ponies, which is to close for entries Saturday next, with Robert Leighton, Secretary of the California Polo and Pony Racing Association, is the most talked of event that has yet been inaugurated by this organization. It is a sweepstakes of $50 each with $100 added by the association and is for ponies 14.2 hands and under, the top weight to be 155 pounds, with an allowance of four pounds for each half inch under that height, and three pounds additional for non-winners. This stake is to be run for at the New Year's race meeting of the association Saturday, December 31st. The distance is six furlongs.

LOU DILLON, the famous champion trotter, reached San Jose last Saturday in fine shape after her trip across the continent by way of El Paso, and is now occupying the quarters fitted up for her by Budd Doble. The mare looks well and under Mr. Doble's care she will doubtless be in condition to begin record breaking when she returns East next summer.

And Now the Midwinter!

Second only in importance to the great "Old Glory" in the list of harness horse sales, is the Midwinter Auction of the Fasig-Tipton Co., known as the sale of The Four Hundred, the annual auction of America's Equine Aristocracy. This sale is the first big sale of 1905, and opens in Madison Square Garden on Monday, January 30, continuing five days. The feature of this season's event is the absolute dispersal of the celebrated Village Farm, the world's greatest trotting nursery, and this one consignment will place the sale among the greatest in history. The passing of Village Farm will mark an epoch in the breeding industry and at the same time be the cause of much regret on the part of lovers of the American trotter. In the years gone by the colors of the Hamlin family have been carried to the front by more great trotters and pacers than were ever sent out from another establishment, and the dispersal of the famous stud means that buyers will be given an opportunity to reap the benefits of more than a half-century of judicious breeding, carried on regardless of expense by that great old man, C. J. Hamlin.

To sellers of trotting stock the Midwinter sale offers unequalled advantages. The Village Farm dispersal will bring to New York every buyer, every breeder and every owner of a trotter in this country and Europe. It is a guarantee that the stock they consign to the sale will be paraded in the ring before one of the greatest aggregation of buyers ever brought together, and that animals of merit will find ready purchasers at remunerative prices. The "Old Glory" sale demonstrated conclusively that the market was never in better condition, and the January sale, coming at the time it does, offering the attractions that it does, seem bound to set a higher standard of values. If you have a horse to sell, this is the sale to consign to. But you must act at once; delay is dangerous, and catalogue space should be reserved immediately. Write today to the Fasig-Tipton Co., Madison Square Garden, New York.

Will Ride in New Carts.

T. S. Granger of Santa Cruz, F. E. Wright of Sacramento and Al Chavo of Woodland all had new McMurray carts of the 1905 model shipped to them this week by the Kenney Manufacturing Company of 531 Valencia street, San Francisco. The McMurrays are in demand by all the leading horsemen and Keeney is receiving letters about them from Victoria to San Diego.

At the auction sale of the horses of the late J. A. Brannan of Philadelphia, held in that city Nov. 14th, the four-year-old colt Grancino 2:17½, by Directum 2:05¼, was bought by Jno. Ott, of Philadelphia, for $3000. James Butler of New York, was a contending bidder up to $2875.

The Sale Confirmed.

The historic old State Fair Grounds at Sacramento will soon be converted to other uses. The Superior Court of Sacramento on Tuesday last confirmed the sale of the property to James McGillivray for $82,500, and the attorneys for the purchaser state that the full amount of the purchase price will be paid over when the deed is made out. According to the Sacramento *Union*, Mr. McGillivray represents a number of local investors whose names are not made public, and it is their intention to subdivided the property into lots and offer them for sale. This eliminates the possibility of a bid in behalf of the Western Pacific Railroad, which was supposed to be making an effort to secure the park.

In the proceedings before Judge Shields the State Agricultural Society was represented by W. H. Devlin, for Devlin & Devlin, and the purchaser by White & Miller.

Thomas Fox, Chairman of the sub-committee, authorized by the Agricultural Society to make the sale, was called as a witness. He testified that the bid in question was about $20,000 more than had been expected and that he had procured the written consent of a majority of the board to a sale at the figure named.

The court ordered a number of claims paid, after confirming the sale. Among these was a claim of $29,686.08 due the National Bank of D. O. Mills & Co. of Sacramento, which was money advanced in past years for carrying on the fair. There is now $45,000 in the State Treasury which will be paid over to the State Agricultural Society, and with the balance of the money in hand after all debts of the association are paid, a tract of land will be purchased near Sacramento and new fair grounds built thereon that will be a credit to the State. In this connection the following bit of gossip in regard to the election of a Secretary, taken from the *Union* will be read with interest:

When the State Board of Agricultural Directors hold their meeting at the pavilion Saturday afternoon, December 17th, it is possible that Albert Lindley will be elected to the position of Secretary of the body. At all events he will not refuse the position if it is offered him and it is known that he has been in San Francisco for the last week, and, it is stated, to obtain the coveted position.

In speaking of the matter yesterday a citizen who is supposed to be conversant with the wants of the society said: "Should Mr. Lindley be appointed to the office of Secretary it will be done as a matter of expediency and for the benefit of the society. The choice will in no manner reflect upon the ability of the present Secretary, who will be retained as assistant.

"The fact is that the property of the Agricultural Society sold for a greater sum than was expected. This, with the amount appropriated by the last Legislature, will assure the paying of all the debts of the society, and all that will be required is a substantial appropriation at the coming session to assure that the new grounds are put in first-class condition."

In an interview with one of the Directors last evening regarding the candidacy of Mr. Lindley he said "It is true that the gentleman aspires to the office of secretary of the society, and if he receives enough votes he will be elected to that position on Saturday, when the Board holds its meeting. Our object is to get the society out of debt and to put up a first-class racing park, such as will be a credit to the State.

"With the amount of money we will receive from the sale of the present park and with the amount of the appropriation made for us at the last session we will be able to pay all of our debts, but we need money to secure a new park, to make a track and erect new buildings, etc. I understand that to obtain such results it is necessary to have some one to handle our interests in the matter of legislation. We do not know of anyone in the State who is better conversant with this subject that Mr. Lindley, and there is a strong probability that he will be selected to fill the position.

"It must also be remembered that in order to erect and furnish a new park a vast amount of work is necessary—more than one man can attend to—and as it will be necessary to select more help, some of the Directors think that it will be a good plan to secure the services of Mr. Lindley at once and let him attend to all legislative measures we desire to have passed."

It was stated yesterday that Mr. Lindley had secured the promise of enough votes to elect him Secretary, and that the selection would have the approval of Governor Pardee, whose desire it is to place the Agricultural Society on a firm financial basis.

P. H. McEvoy of Menlo Park is offering two handsome Prince Airlie stallions for sale—Milbrae (trotting record 2:16½) and Menlo Boy 3741. For particulars see advertisement. *tf

The racing men ought to try the Hart Apartments this winter; 3 and 4 rooms, private baths, telephone, steam heat, first class. 750 Ellis street. *tf

CRIPPEN'S CHRONICLES.

Hello! how do you do. Mr. Smith, going somewhere?

Why, good morning, Mr. Jones, glad to see you. Yes, I'm going to San Jose to see Lou Dillon. I saw by the Call that she arrived last Saturday.

Yes: I was at the depot when she came off the cars. She is a beautiful mare and looking fine. Did you ever see her?

No: and I am glad of this opportunity. I suppose she'll go East again in the spring.

I expect so. Come on, here's your train. I'm going down as far as Palo Alto.

You don't live in Palo Alto, do you?

No, not yet, but I'm going to soon—bought some property down there and am building a house on it. It's a good place to live—a clean town—no saloons, you know—great educational advantages—and the best climate in the State

The papers said Billings sent Lou Dillon to San Jose on account of the climate at that place. Is the climate any better there than at Pleasanton?

No; there's little difference in the climate in the winter season, but Pleasanton track has the best soil for wet weatner. Mr. Billings sent his mare to Doble and if Doble had been located at Pleasanton, or any other place in California, he would have got the mare just the same.

Will Doble drive her next year?

I don't know anything about that, and I don't believe anyone else does.

She was not as good this year as last. Do you think she will ever beat 2:01 without a windshield?

Yes; I think she will. I believe her winter here will prove of great benefit to her and that next season she will beat 2:00. California is not only the best place in the world to winter horses but the best place in the world to raise them. Look at the records made by California horses this past season. Twenty of them entered the 2:10 list. Over $100,000 won by them on the eastern tracks. The greatest race trotter that ever lived is a California mare. But all our great ones did not go over East to race, some of them raced at home and some of them did not race at all. California can raise the best in the world but they must go somewhere else to get the money. It is a sad condition of things that a high-class trotter can not win more money in California and cannot find a purchaser at 50 per cent of his value within the borders of his native state. I don't know what is the matter with the California people. It is not the lack of wealth, but it seems that those who have the most money care the least for a trotter. They had rather own a bad-smelling, noisy automobile and a few polo cayuses, and a few are interested in runners who after their days of usefulness to bookmakers and gamblers are over are worth about 30 cents apiece. A fast outclassed trotting gelding that is not broken down is worth hundreds and thousands of dollars for a road horse and for the speedway.

Is there much breeding being done at present in California?

Yes; by individual breeders and a few small stock farms but there is no one to take the place of Gov. Stanford, Wm. Corbett and L. J. Rose, men who first made California famous as the birthplace of world's champions.

Do you think Sidney Dillon brought all he was worth?

I do not. I believe that if there is a sire in the world worth $50,000 it is the sire of the incomparable queen of the turf.

Why do you think he sold so cheap?

Oh! the public is very fickle and troubled with a short memory. They expect Lou Dillon to trot this year in 1:55. She was off, sick, and at no time able to do herself justice. The day that Major Delmar beat a sick mare they forget all about the race she won from him the year before and the style in which she did it; they forget all about the series of wonderful miles she trotted in 1903.

Has he got any good colts in training in this State?

Yes; a few. I know of a couple of young trotters by him that have had a little work, and are certainly 2:10 candidates. His colts are good headed, exceptionally good gaited and come to their speed rapidly.

Well; I'm glad he went to Indianapolis, that is near my old home and I will send some mares to him in the spring. One certainly can not do better than breed to him.

What's the name of this station?

This is Burlingame. Over there to the left is what was once the famous San Mateo Stock Farm, you can see the buildings from here. Where once frolicked the ... trotters that Johnny Goldsmith developed and ... to victory in many a hard fought race are now grazing some mongrel bred polo ponies.

It seems like desecrating hallowed ground, don't it?

Indeed it does. The Palo Alto Stock Farm is also a thing of the past isn't it?

Yes; nothing left but a few old pensioners.

How were your races here this last season?

Very good; but there were only five meetings in the California Circuit The Pacific Coast Trotting Horse Breeders Association gave two of them, one at San Jose and one at Santa Rosa. They were very satisfactory, high class racing and the attendance better than for years. The "Breeders" Association has been a great benefit to the trotting industry in California. It has kept the thing going when there would have been no racing had it not been for the "Breeders."

Do you know of any good racing prospects now in California?

Yes; plenty of them, the woods are full of them, lots of high class untried youngsters and some that have shown their quality in actual races. Among the green ones there is P. W. Hodges' two-year-old pacer by Nutwood Wilkes than can step a mile in 2:12 or better. He is a grand colt and don't wear a strap more than is absolutely necessary to hitch him up. His dam is by Patron 2:14, second dam by Harold, sire of Maud S. 2:08¾, third dam by Pilot Jr. He is entered in all the Eastern stakes. There is a black mare at San Jose by Charles Derby with three months work has trotted a mile in 2:13½. A three-year-old McKinney colt at same track has been a mile in 2:16 with little work. A gelding by Diablo that has been in 2:15 on a trot. I saw a pacer by Diablo that has never had any professional training step a mile in 2:13 over a slow track, badly hitched, and driven by a coachman. There is a three-year-old at Santa Rosa that trotted a mile early last summer in 2:16. There is Sonoma Girl at Pleasanton that can beat 30 seconds for a quarter of a mile just as easy as can Lou Dillon. In the same stable is a green pacer that can do a half in a minute. Also at the same track are a couple of four-year-old trotters by Zombro that have shown better than 2:15. A green trotter by Charles Derby that has been a mile in 2:14½ and there are others. I am told that Will Durfee has a wonderfully fast green McKinney mare at Los Angeles, another Sweet Marie. There are lots of fast two-year-olds in the State by Nutwood Wilkes, Prince Ansel, Nushagak, Zolock, Zombro and McKinney. Of the record prospects there are a couple that I believe have a great future in store for them if they fall into good hands. One is Morosco 2:12, a good gaited fast and game horse. He started six times, won four firsts and was twice distanced on account of bad breaking. In good hands I believe he will become perfectly steady and reliable and then it will take a great trotter to beat him. The style in which he won his race at Santa Rosa made him look like a high class performer, 2:12½, 2:12¼, 2:12, with consummate ease, last heat finished in a jog.

The other one comes nearer being my ideal of a perfect race trotter of any thing it has ever been my lot to see perform. This is the three-year-old filly Mamie R. 2:15½ by a son of Oro Wilkes 2:11, dam the royally bred mare Moscova (3) 2:28 by Belmont 64. Not having any stake engagements she only started four times, twice in the three-year-old class, once in the green class for aged trotters, and once in the 2:18 class. Her first start was at Pleasanton the last week in July in the three-year-old class. She had been suffering for a month with distemper accompanied with severe cough and consequently had received but little work and no fast miles, nevertheless she won with ease in 2:24¼, 2:22¼, 2:21¼. Her next start was in the green class trot at San Jose where she was second to Jupiter B., the first heat in 2:19¾ but only got fourth money The same week at San Jose she started in the 2:18 class making no effort to beat Briney K. 2:11, but finishing second to him three times in 2:20, 2:19, 2:18½ defeating Verona 2:18 and Rozelle 2:14. Two weeks later she started at Santa Rosa against the same class of three-year-olds she defeated at Pleasanton. Murray M., who had won the Breeders Futurity at San Jose had been showing improving form, was considered by some as being able to take her measure. She took the first two heats in 2:18, 2:18, but the third heat Murray M. was turned loose. At no place in the mile was she in danger till 150 yards from the wire when an accident to her sulky caused her to make the only break in her life. Murray M. won the heat pulled up in 2:14, Mamie R. finished with one sulky wheel dragging. Had it not been for the accident to her sulky, there is no doubt on earth but she would have won the heat and the time would have been 2:13; faster than any three-year-old had trotted up to that time this year. The fourth heat she won all the way in 2:15½, proving herself to be as game as the gamest. And she was sick that day, having caught additional cold, her cough was worse and every time she was unchecked and her head lowered quantities of mucous came from her nostrils. Able to trot in 2:13 in August, trained and driven by her owner who raised her on a bottle and who makes no pretentions of being a Gatcomb, Thomas, Titer or McClary, men who drove the greatest three-year-olds in the East this year, and 30 lbs. over weight, had her training been continued till October, when those great three-year-olds made their records, I believe that over the same tracks she would have been capable of trotting as fast as the fastest, and she is just as game and the best broken and best mannered trotter that I ever saw. Her owner is a poor man and this filly is for sale, but do you suppose there is a man in California that has sand enough to buy her and pay half what she is worth? No; they had rather go to some sale and buy a no account cast off, a distant relative to some noted performer, for $75 and give it to a trainer, pay him $30 per month in the vain hope of getting a race horse worth $10,000 for two or three hundred.

After training the thing a few months and the coming crackerjack fails to materialize take it home and trade it off for a yellow dog, shoot the dog, condemn the trainer, go to the next sale, buy another prospect, place it in the hands of some other trainer with the same results as in the other case A friend of mine who has plenty of money and some good horses and some poor ones told me he thought Mamie R. was one of the greatest trotting prospects he ever saw and well worth the price asked for her. I agreed with him on his opinion of the filly and asked him why he did not buy her. He said he would, but he had some that he wanted to dispose of before he purchased any more, was afraid of getting over stocked. I didn't want to hurt his feelings, consequently I didn't advise him about getting rid of his cheap ones, but I'll tell you what I'd do. I'd sell 'em. If I couldn't sell 'em, I'd give them away. If I couldn't give them away, I'd pay someone to take 'em away; then I'd buy Mamie R. and feel that I had made money in the transaction. For I sincerely believe she is another Sweet—but this is Palo Alto. There's the tall Redwood from which Gov. Stanford's famous stock farm and this college town take their names. This is the depot, to the left lies the town and here on the right is the newly constructed entrance to the University grounds. Half a mile down that avenue are located the most costly, durable and extensive university buildings in the world. You can see Memorial Arch from here. Well, good bye, Mr. Smith. Remember California beats the world. Give my regards to Mr. Dohle and the dainty Lou.

Good bye, Jones; very glad I met you. Am greatly impressed with this wonderful country; hope to see you again soon; good bye.

C. C. C.

Death of a San Jose Horseman.

While watching a bonfire in his back yard about 6 o'clock one morning last week, C. V. Hill, a well known horseman, who resided at 516 Orchard street, San Jose, was seized with a coughing spell, fell forward on his face and expired before help could be summoned. He had been troubled with heart disease for the last year and it is supposed that while watching the fire a sudden gust of wind blew the smoke into his face, smothering him and causing him to lose his breath.

Mrs. Hill and her daughter were in the back part of the house at the time, and hearing groans, ran out and found Mr. Hill lying face downward on the ground. He was taken into the house at once and a physician was summoned, but he had already passed away.

Mr. Hill was born in Pittsfield, Ill., in 1850, and had been a resident of the county for about eighteen years, having come directly to San Jose. He has been connected with horses nearly all his life. He leaves a wife, daughter and two sons. He also leaves a brother in Mexico and two sisters in the East. His sons, J. C. and L. H. Hill, hold positions with the Northwestern Lumber Company at Willits, Mendocino county.

The Horse's Sense

Teaches it that it needs a germicide or some special assistance to its food to combat the diseases which are so prevalent. Coughs and shipping fever, as well as other varieties of distemper, are contracted with slight exposure at all times of the year. This is especially true in early or late winter. The horse, free in the pasture, eats with relish articles which seem loathsome to the observer It is seeking a medicine. The owner should keep a constant supply of Craft's Distemper & Cough Cure and have it ready for use when there is the slightest appearance of a cold or other trouble. Is it is a preventive as well, the safer plan is to give it to the horse as a tonic once a week regularly. Our readers should not fail to consult a druggist or, if need be, write to the Wells Medicine Co., 13 Third St., Lafayette, Ind., for a supply of this valuable treatment.

Cured Spavins of Five Years' Standing.

DARTMOUTH, N. S., April 5, 1904.

Dr. B. J. Kendall Co., Enosburg Falls, Vt.

Gentlemen:—I have used your Kendall's Spavin Cure and found it very satisfactory in three cases I cured spavins of five years' standing. I am so pleased with the remedy that I would like to have the book "A Treatise on the Horse and His Diseases."

Very truly yours,

JAS. EGBERT D. YOUNG.

Notes and News.

Get the Christmas number next week.

The Grand Circuit meeting at Readville last August cleared $15,000.

A very choice saddle horse sold for $4000 in New York City last week, if report is correct.

Mr. Billings expects to ride Alexander 2:09¼ against the saddle record for trotters, next season.

The East View Farm horses reached Pleasanton last Saturday. About forty head were in the consignment.

Honduras, bay gelding by Prince Nutwood 2:12¼, trotted a quarter to cart at San Jose track last week in 0:33.

The year is not yet closed and yet two two-year-olds have been sold for $10,000 each—The Phantom and Bon Voyage 2:15.

Ed Geers is reported as being able to be up and around at Memphis, visiting the Memphis track with the aid of crutches.

It is said that Dave McClary received $10,000 for Lord Revelstroke 2:12¾, the fast three-year old trotter he sold to Austrian parties.

Ben Walker will drive for Charles Longhothom of Chester, Pa., in 1905, and his string will include Frank Yoakum 2:05½.

Charley De Ryder will campaign King Direct 2:05½ next season along with the halance of James Butler's Grand Circuit string.

J. J. Scannell of New York, owns a two-year-old colt by Chimes, dam the famous old race mare Kentucky Union 2:07¼ by Aberdeen.

Belsire 2:18, who was purchased by a Canadian gentleman at the Old Glory sale, is said to be the first son of Electioneer ever owned in the Dominion.

It was Thos. Sharkey, the pugilist, who paid $5000 last week for Oak Blossom 2:12½, and John Schoonmaker ships her shortly to England, where she may be raced.

James Butler, proprietor East View Farm, has purchased the six-year-old mare Lottie P. by Axworthy 2:15½, dam thoroughbred, and Charley De Ryder thinks he has a 2:10 trotter in her.

The farm horses of the United State are not as numerous as they were a year ago but they are worth more money in the aggregate. So says the Secretary of Agriculture, and he ought to know.

The Drivers Protective Association now has five members. If it continues to grow it will soon be able to make the drivers a bigger part of the game than some of the associations now consider them.

It is reported that Jimmy Gatcomb expected Grace Bond to fetch $30,000 at the Old Glory sale; hence, he did not let her go. Mr. Stinson offered him $20,000, but at that price Gatcomb preferred keeping her.

O. H. Bullene, of Salinas, recently so'd his handsome driving horse Pan Yan to Dr. Ward, of San Francisco, for $350. Pan Yan is by Dictatus 2:17, out of Lilly V., and was bred by Judge Vanderhurst of Salinas.

H. K. Devereux participated in ninety-six wagon events during the past season, winning forty-eight races, being second in twenty-eight and third in ten, and unplaced hut ten times. This is certainly a remarkable showing.

Andy Welch has suggested that there be another New England mile track circuit, and he would come into the fold with Charter Oak. A circuit of this kind has not been in effect for three years, since the dropping out of Old Orchard.

Sidney Dillon's new owner was offered $15,000 for him after the stallion reached Maywood Farm, Indiana, hut says that no offer of less than $25 000 will tempt him. Sidney Dillon's service fee will be $150 for the season of 1905.

James Thompson, who made a most successful campaign on the Grand Circuit this year with Col. Kirkpatrick's Strathway gelding John Caldwell 2:11¼, reached Pleasanton last week with quite a string of horses he brought from the East.

Dan Patch paced a mile over the Dallas, Texas, track on Thanksgiving Day in 2:01¼, driven by H. C. Hersey and paced by a runner driven by Charley Dean. The fractional time was :30½, :29½, :30, 30¼. Ten thousand people witnessed the performance.

Daughters of Nutwood 2:18¾ furnished a greater number of the new standard performers of 1904 than those of any other sire—ten trotters and seven pacers. His daughters have already produced 179 trotters and 60 pacers that have made standard records, a total of 239. This gives him a long lead over any other stallion that has ever lived as a sire of producing dams.

"Jack" Groom has a very promising green pacer at San Jose in a bay horse by Don L., dam Economy 2:28½ by Echo He worked him two heats recently in 2:13 and 2:14. In the last mile the first and last quarters were both in 0:32. Jack thinks he will race better than 2:10 next year.

The picture of Sweet Marie which will be issued as a supplement to the Christmas edition of the Breeder and Sportsman will be one of most lifelike as well as a most artistic picture, and every horseman should have one. Get the edition with this picture with all the other good things in it for 10 cents.

Sidney Boy, registered number 22991, is advertised for sale by Mr J. W. Stufflebeem in this issue. Sidney Boy is by Sidney and his dam, Black Beauty (the dam of Vidette 2:23¾) is by David Hill Jr. 17139, sire of the grandam of Kinney Lou 2:07¾. Read the advertisement.

D. G. McDonald, a member of the Pittsburg Driving Club, who recently purchased both Jack Axworthy (2) 2:15¼ and Dr Strong 2:07½, has placed both geldings in the hands of Ed Benyon. Dr. Strong will he raced down the line next summer, but as Jack Axworthy has no stake engagements next season he will probably be raced at the matinees.

P. W. Hodges has taken two of his most promising youngsters hack to the San Jose track to give them some fast work during the rest of the month. He hopes to step his great two-year-old pacer by Nutwood Wilkes a fast mile before Jan. 1st The other one is a yearling by Zombro 2:11, dam by Nutwood Wilkes, and is an unusually good prospect.

James Sullivan, the well-known trainer and lessee of the track at Willows, Glenn county, is in San Francisco for a few weeks, having brought down a number of good roadsters for sale. He reports the country in fine shape and feed in the pastures was never hetter at this season of the year. Glenn county farmers and stockraisers are prosperous.

Robizola, the fast trotting mare by Robin that Millard Sanders raced over East last year for Dr. Clark of Santa Rosa, is offered for sale. She can be seen at Morton's Stable, corner Geary and Leavenworth streets in this city. Robezola's record is 2:12¼, she is one of the best bred ones in the country, and is a very handsome mare as well as an excellent roadster and high class race mare.

Congressman Needham, of Modesto, has ordered the sale of a number of well bred horses which are advertised in our columns this week. There are several colts and fillies entered in such big futurities as the Kentucky, Horse Review, the American Horse Breeder and others. There are twelve horses in all. Anyone wanting a well staked and well bred colt should read the advertisement.

A press dispatch states that James Butler of New York, has purchased from C. C. Van Meter of Louisville, the fast two-year-old colt The Phantom, by Boreal 2:15¾. The Phantom has no record, but trotted a trial in 2:15¼ last season and won a division of second and third moneys in the Review two-year-old Futurity at Cincinnati. He is a very handsome as well as speedy colt and a candidate for the three-year-old Futurities of 1905.

Devotees of matinee sport in Buffalo will sincerely regret to learn that Mr. George E. Lattimer has decided to sell his horses and, for a time at least, retire from this branch of sport in which he has been so prominent. Mr. Lattimer will spend the coming winter in California and, on account of the death of the late W. S. Grattan, his partner in business, expects to have little time to devote to pleasure next summer.—*Horse World*.

This is the time to sell. You will notice the big advertisement in this issue wherein the Fasig-Tipton Company asks for consignments to its big Mid-Winter Sale which is to be held in New York beginning Monday, January 3d. Here is an opportunity to sell a good horse for a good price. The McKinneys are on the top wave of the boom now and they will sell well. A car load of McKinneys would bring a lot of money at this sale.

General MacArthur's recommendation that captains of infantry and coast artillery be mounted has been taken up by the officers of those arms of the service, and a concerted effort will be made at the present session of Congress to bring about the legislation required to authorize the innovation. A circular embodying the recommendation has been sent to each infantry and artillery officer in the Department of California.

Mr. Billings' purchase of Major Delmar makes his stable of harness horses the most famous in the world. He has two two-minute trotters, the fastest pacing pair owned in the same stable, while making their record; the champion trotter to saddle, the fastest pacer to saddle in a race at a regular meeting, and the champion trotting team. The majority of the Billings stable will be wintered at Glenville in Mr. Billings' private stable, in charge of Doc Tanner.

Among the arrivals on the Australia from Honolulu this week was C. H. Durfee, son of C. A. Durfee. "Doc" as he is familiarly termed by his intimate acquaintances has been in the U. S. Government Customs services at Honolulu for a long time, and this is his first visit to "the old folks at home" in six years. Mr. Durfee is an occasional correspondent of the Breeder and Sportsman and has written many interesting items for this journal about the Hawaiian horses.

After a "twenty years" retirement, W. W. Bair, who gave Maud S. her record nineteen years ago, and who since has not been prominent in the trotting game, but who was evidently awakened last year by the hall-hearing, high-wheel affair, has again broken into the trotting game, and has the Directum stallion, Grancino (4) 2:17¼, at Belmont Park, Philadelphia, Pa., that along with several others, will he campaigned by Mr. Bair next season.

The Miller cart and the famous Decker sulky are two vehicles that are very popular on the Eastern tracks and are rapidly coming into favor on this Coast. Budd Doble says he likes the Decker sulky better than any he ever sat in, which is a strong recommendation. John I. Sparrow of 3156 Mission street is the Coast agent for these carts and sulkies. Write to him for a booklet which sets forth all the particulars about them and gives styles and prices.

An Eastern writer says: "When Arion went to Kentucky the Blue Grass breeders were much taken with him, and the fact that they let him go for the small sum of $2500 shows conclusively that they do not like the crop of colts which he got while in the Kentucky region. It is not unlikely that the next thing to happen will be a sensational performer by Arion. Then there will be a lot of people on hand to remind the horsemen what a lot of fools they were to overlook the son of Electioneer."

Hopper 2:14¼ by McKinney and Trilby Direct 2:08¼ by Direct, will hoth go to the "land o' cakes." Mr. Adam Machattie of Scotland purchased the former at the Old Glory sale and the latter a few days afterward from James Butler of New York, and will ship them over the ocean in a few days. Hopper was bred and raised by the Meek Estate of Haywards and Trilby Direct by Juan Gallagos of Mission, San Jose, and both were trained at Pleasanton. The California bred mare Flare Up 2:14 by Chas. Derby was also purchased by the same party.

Dr. C. C Ricks of Eureka, Humboldt county, arrived at Pleasanton last week with a string of horses including his splended colt Cruzados by McKinney 2:11¼, dam Stamboulita 2:27 by Stamhoul 2:07½, second dam Biscari, dam of five in the list by Director, third dam Biscari, dam of seven in the list by Harold Dr. Ricks will keep his horses at Pleasanton until April 1st and then Cruzados will he shipped back to Eureka to make the season there. He is one of the most royally bred of the McKinneys and is a grand colt. Cruzados was hred at Santa Rosa Stock Farm and foaled in 1901.

T. W. Barstow, of San Jose, worked a two-year-old pacing filly a mile one day last week in 2:12½ This filly is a great racing prospect, a fine individual and a great bred one. She was sired by Nearest, first dam by Danton Moultrie son of Guy Wilkes and Carrie Malone, full sister to Klatawah 2:05½ and Charles Derby 2:20 hy Steinway; second dam by Soudan 2:27; third dam by Nutwood 2:18¾; fourth dam by Owen Dale; 5th dam by Grey Eagle Meeting with an accident early in the season she has had hut very little work. All the youngsters hy Nearest show remarkable speed with hut little training.

William Cunningham of Honolulu came up on the last steamer and reports matters rather quiet on the islands among the horsemen. He states that many of the "has heens" of California race tracks now owned in Honolulu are enjoying good care and treatment and passing their time in ease. Waldo J. 2:08 is used as a road horse, Joe Wheeler 2:07½ is fat as a dray horse and only driven occasionally and many others are doing as well. Old Tom Ryder 2:13¾ is in a livery stable and gets considerable driving, and can pull a buggy a quarter at his old clip. Dr. Shaw, a veterinarian, who has been living on the Islands for some time came up with Mr. Cunningham, and may locate here permanently.

Dr. J. H. Wagner, of Selma, California, has recently received a prize colt which he purchased this year in Tennessee. The colt is a handsome bay and is called Don Gentry. He is a foal of this year and was sired hy the great pacer John R. Gentry 2:00½ and out of Donna Inez by Stranger son of the old champion Goldsmith Maid 2:14 The second dam is Banquette, dam of Cadet 2:09¾, by Brown Hal 2:12, sire of Star Pointer 1:59¼, etc. The third dam was Bonnie Annie, and she was out of the dam of Mattie Hunter 2:12¾ one of the famous pacers on the Grand Circuit years ago. Donna Inez with Don Gentry at her side won the cup for best broodmare at the Columbia Tennessee fair this year. Dr. Wagner will purchase a nomination for this royally bred colt in the Breeders Futurity for foals of 1904.

The carriage team that E. W. Howes. of New York, recently paid $5000 for, and that has won a long string of blue ribbons at the principal horse shows in high-stepping classes, is made up of two daughters of trotting bred stallions. The mares are known as Mystic II and Marigold II. One is a daughter of Bonnie Wilkes 2:14¼, and the other was sired by Wilkesward 2:18½, the sire of this season's erratic trotter, Kent 2:09¾. They were brought to New York by an Iowa dealer in a carload of sale horses. For two years the dealer kept them, no one caring to give his price for them and he refused to come down a cent. With handling, they rapidly developed show manners, and their owner's price on them began to go up until finally Mr. Howes hought them for $5000. The Iowan estimates that it cost him about $3000 to keep the mares during the two years he had them in New York, but in the end he won out on them. Good judges pronounce the pair to be one of the finest ever seen in the show ring.

News From the North.

[Portland Rural Spirit.]

Alta Nola 2:20, is a new performer for old Altamont and gives him an even fifty in the list.

O. J. Groce is having his Capt. Jones stalllon, Oliver J., jogged this winter. He is one of the best looking stallions on the track.

John Sawyer, who has four young Zombro's in his stable, says they are the only family of trotters he ever had pleasure in working.

Sam Simmons, of St. Johns, Ore., is going to take a shot at the Oregon trotting record under saddle, at the Oregon State Fair next year.

Robt. H. Cosgrove has made arrangements to manage the Spokane Inter-State fair another year, and will undertake to make the fair of 1905 bigger and better than ever.

Harry Osman is jogging a very promising trotter by McKinney 2:11¼, out of Beulah, full sister to Chehalis 2:04¼, by Altamont. 'Arry says "he is the makin' a bloomin' fast trotter, don't yer' know."

George Beckers, owner of the great young sire Zombro 2:11, will bring him back to Oregon next year. The young Zombros up here are so promising that many breeders have written Mr. Beckers to bring the horse back again.

Wylie A. Moores, secretary of the Oregon State Fair, has been elected municipal judge of the Capital city. Should Judge Moores on taking his seat, tell the bailiff to "bring out the horse" or refer to the national trotting rules in making decisions no one should blame him. Remember hobbles are barred on everything over three years old, Wylie.

At the annual meeting of the Portland Hunt Club the following officers were elected for the ensuing year, F. O. Downing was re-elected president, E. R. Eldridge, vice-president; E. T. Chase, secretary; R. H Jenkins, treasurer and Ambrose M. Cronin and J W. Cruthers were elected members of the board of directors. It was decided at the meeting that hereafter the annual Thanksgiving Day run would be for a cup that would be purchased by the club. The board of directors were instructed to invest $250 in this trophy, that the winner and his mount's name should be engraved on the cup, and that is should be the property of the winner just so long as he or she won it.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

THOROUGHBREDS.

THERE ARE MANY fine individuals in the consignment of twelve thoroughbreds that Fred H. Chase & Co. will sell for Theodore Winters, Esq., next Monday evening, at 1732 Market street, this city. The El Rio Reys and Rey del Sierras are proven campaigners and all these to be sold are by these sires and out of Mr. Winters' best mares. The dams whose get are represented in this sale are Nellie Post, sister to Don Jose and Ella Smith by Joe Hooker; Ogzilla, dam of Malo Diablo and Toto Gratiot by Norfolk; Diablita sister to Malo Diablo by Joe Hooker; Louise M. a winner and dam of Lou Rey and Louise Hooker, by imp. Kyrle Daly; Ogalena, dam of Rey Hooker, Clara Johnson and Adelante, by Joe Hooker; Fonsetta, dam of Scarborough, El Fonse, El Pilar, Jennie Reed and John Lemmons by Fonso, and Sylvia, dam of Belle Boyd and May Gertrude by Joe Hooker. Buyers will make no mistake if they visit this sale and bid on any of this dozen well bred and promising youngsters. There are future stake winners among them.

The New Memphis Jockey Club announces ten stakes that will close January 2, 1905 Eight of these stakes are for the spring meeting of 1905, two, the Tennessee Derby and Tennessee Oaks, for the spring meeting of 1906. Of the eight stakes to be decided at the coming spring meeting, three are for two-year-olds, foals of 1903. The Gaston Hotel Stakes for colts and geldings, will be worth $2200. The distance is four furlongs. The Ardelle Stakes, for two-year-old fillies, will be worth about $2200, and the distance four furlongs. The Memphis Stakes for two-year-olds, five furlongs, will be worth about $4000. There is one stake for three-year-olds, the Hotel Gayoso Stakes, distance one mile, which will be worth about $2000. This stake is given as a consolation race for beaten horses in the Tennessee Derby, and will not be rich enough to penalty three-year-olds in coming events. There are four events offered for three-year-olds and upwards, including the famous Montgomery Handicap, which will be worth about $5000. The distance is one and one-sixteenth miles. The Peabody Hotel Handicap will be worth about $3000, distance, one and one-eighth miles. The Cotton Steeplechase Handicap, valne about $2700, with a distance of about two miles. These three events cost nothing to enter. Declaration fee is $10, which can be made after the weights are announced in the Montgomery Handicap. The fourth event, the Tennessee Brewing Company's selling stake, will be worth about $2500, the distance seven-eighths of a mile. The two stakes offered for 1906 that will close the same time as these stakes, are the Tennessee Derby, one and one eighth miles, which will be worth about $12,000, and the Tennessee Oaks, distance one mile, which will be worth about $5000. These two stakes are for foals of 1903. It costs nothing to enter either one of them, and any can be struck out May 2d at a very small cost. These stakes should be worthy of the attention and support of the horsemen.

W. Beauchamp, the American jockey who was deprived of his license in September by the Jockey Club of Germany, has been officially notified that he is restored to all privileges and will be permitted to ride in 1905.

Mrs. Annie Madden, wife of John E. Madden, owner of Hamburg Place and one of the most widely known of American turfmen, has filed a suit for divorce in Cincinnati, charging abuse. Their two children have been placed in a Catholic school in New York state.

An innovation in the form of an electrical annunciator is to be introduced at Essex Park, Hot Springs, Ark. It will be operated from the judges' stand and will display the result of each race at three points on the grounds instantaneously and simultaneously. There are nine glass disks upon which have been painted numbers from one to sixteen. There are three groups of three disks each—one group on the timers' stand for the benefit of the persons in the grandstand and on the lawn; one in the betting ring, which will do away with the time-honored and quite unsatisfactory method of having some word-garbling crier shout the names of the one-two-threes so indistinctly that seven-tenths of his hearers cannot understand the names of the horses and the other in the club house, where the finish is seldom known at some tracks until a betting commissioner can run down with his first odds for the succeeding race. The operation of the device is simple The presiding judge or the placing judge has merely to touch one of sixteen buttons in the first row on the board in front of him and immediately an electric light shines be-

CRESCEUS 2:02 1-4

A Truly Great Horse and Still the Champion Trotting Stallion, although the Wichita Record of 1:59¾ has been Rightfully Denied Him.

hind that number on the disk which indicates the winner. The same operation is repeated in designating second and third horses. When the result has been made official, another button is pressed and under the three disks in the three places appears the word in letters of electric light. The pressing of still another button at the desired time extinguishes the lights and sets the apparatus for the result of the next race. In theory it is a time-saving, silent and effective arrangement. If in practice it is accurate, the device will be commendable to a degree that will insure its adoption at other and possibly all tracks.

Jockey Danny Maher, who has been riding successfully in England for several seasons, has returned to spend the holidays in his native land. Danny looks the picture of health. He says the past season was the most successful of his career abroad. He had 456 mounts and won 116 races. He stands third in the list of winning riders, Otto Madden being first with 160 and Jimmy Lane second with 127. Maher is especially proud of the fact that he rode the winners of three $50,000 stakes. On Rock Sand he won the Princess of Wales and Jockey Club Stakes and on Darleydale he scored victory in the Eclipse Stakes. He won for his employers about $400,000. Maher will go to Hartford, Conn., next week and will remain until after Christmas with his parents and sisters. He will go back to England the latter part of February.

On Wednesday, November 30, Magistrate Dennison of Toronto, Canada, registered a conviction against Persident Hendrie of the Ontario Jockey Club on the charge of "Keeping a disorderly house, to wit, a common betting house at a Woodbine racecourse." If the decision is sustained it means that no betting can he done at the spring meeting of the club. A stated case will he taken to the court of appeals as speedily as possible. It may be necessary to go to the supreme court afterward, no matter which side wins. It is anticipated that a final decision will be arrived at before the May meeting. In the meantime no sentence was imposed and the case was remanded till the first of February, when it may he again adjourned. The case against the Canadian hookmakers—Jack Saunders, Abe Orpen and Edward Haskins—was remanded for a week, but its settlement will depend on the outcome of the other case.

Edward R. Thomas of New York, who sold most of his racing stable when the season closed on the metropolitan tracks, has leased from David Gideon the latter's splendidly appointed breeding farm at Holmdel, N. J., for a term of years and has an option on its purchase. The place embraces 400 acres and represents an investment of about $250,000. Many well-known racers were bred there and it is understood that Mr. Thomas will shortly put into effect his plan for breeding another stable. The Gideon horses will be transfered to Kentucky.

TOZER'S GOSSIP.

It transpires that I. P. Diggs, of Woodland, is not to be a partner of John Mackey and Walter B. Jennings in the Yolo Thoroughbred Farm after all. True, Mr. Diggs bought a part of the Curtis ranch which is to be the headquarters of the breeders mentioned, but it seems that the Woodland man is to retain his portion of the land and operate independently of Messrs. Mackey and Jennings. Imp. Galveston and the grand turf performer Rockaway are to he the principal stallions at the new breeding establishment of the well-known duo of horsemen. Galveston is of the great Galloper breed that gave us St. Simon, St. Serf, Persimmon, Diamond Jubilee, Florizel and Galhard, while Rockaway is a son of the stake winners Altamax and Recreation, by Imp. Maxim and Morollo, respectively. Galveston was on the Burns & Waterhouse ranch all season, and is declared to he a grand specimen of the English racer. Rockaway was one of the "star" two-year-olds of 1903—a stake-winner in aristocratic company and capable of negotiating any sort of track swiftly.

The Burns & Waterhouse yearling sale last Saturday at their Emeryville track stable was a decided success, the twenty-one head bringing $15,575, or an average of $741.66. To my mind the prize of the sale was Husan, an own brother to Humo, one of this season's cracks. He is a big, racy-looking colt, with plenty of vim and dash, and looks as if he could go out and "get the money" for his new owner, Charles T. Patterson, at the first time of asking. Husan looks a bargain at $2100. "Billy" Murray, at $1000, secured a likely-looking little filly by Eddie Jones–Dangerous Maid (the first of the good mare's produce). As this wee miss was foaled March 15th, she may finish into a good-sized one after all. Frank O'Rourke purchased a sturdy looking brother to Rollick for $800, and is highly pleased with the baby, which is called Frolic. For $225 Garnet Ferguson bought No. 1, Figami, a splendid-looking chestnut colt by Figaro–Amida, therefore a half-brother to Impromptu. Tony Girl, by Eddie Jones–Bit of Fashion, looks a bargain at $375, as does Figaretta, a bay filly by Figaro–Cosette, secured by E. McNamara at $150. New purchasers to Coast folks were Al Koningsberger, W. Engstrom and J. O. Keene, the first-named getting Etapa (by Take Notice–Hoolou) for $1250; W. Engstrom, My Pal (by Eddie Jones–Palomacita) and Rosaro (by Figaro–Sweet Rose) for $550 and $275; and Mr. Keene, Prince Nap (by Eddie Jones–Napamax) for $2250, the top price of the sale. Mr. K. is himself a big breeder in Kentucky, and ought to know a good horse when he sees one, for it was he who trained the celebrated Russian colt, Irish Lad, so well that he became the acknowledged champion racer in the land of the White Czar. And, by the way, Prince Nap, (which is an own brother to Escobosa) looks a Prince, and if he does not prove a rare good one belies his appearance. Mr. Patterson also had knocked down to him for $1700 Mendocino, brother to Alsono (which he trained and sold for $10,000), and Warwheel, a chestnut colt by Col. Wheeler–Spainwar, the latter costing $2000 and "out-looking" pretty nearly everything in the lot disposed. A chestnut colt by St. Carlo–Reseda II (dam of Masedo and Basseda) was offered by Michael Fox, but not fetching the reserve price of $2000, was retained, and will sport silk soon in the colors of W. O.'B. Macdonough. Following are the details of the sale:

PROPERTY OF BURNS & WATERHOUSE.

Figami, ch c, by Figaro–Amida; T. Garnet Ferguson	$ 225
Alberna, b f by Altamax–Berna; K. Kimberly	200
Tony Girl, b f by Eddie Jones–Bit of Fashion; C. F. Ralfieri	375
Figaretta, b f by Figaro–Cosette; E. McNamara	150
Dangerous Girl, b f by Eddie Jones–Dangerous Maid; W. M. Murry	1000
My Dulcie, b f by Col Wheeler–Dulcie Larondie; H. Stover	50
Boloman, b c by David Tenny–Ella Boland; D. S. Fountain	350
Frolic, ch c by Take Notice–Happy Maiden; Frank O'Rourke	800
Etapa, b o by Take Notice–Hoolou; A. Koenigsberger	1250
Husan, br c by Eddie Jones–Humidity; C. T. Patterson	2100
First Lake, ch f by First Tenor–Lakelo; P. McAuliffe	200
Madri, b f by Altamax or Take Notice–Madrina; T. F. Clark	200
Ban Boy, ch c by Take Notice–Miss Ban; W. M. Baird	175
Legal Form, b c by Eddie Jones–Mortgage; W. Miller	375
Prince Nap, br c by Eddie Jones–Napamax; J. O. Keene	2250
My Pal, b c by Eddie Jones–Palomacita; W. Engstrom	550
Sea Lad, b c by Figaro–Sea Bass; J. Havalaw	250
Mendocino, b c by Altamax–Sonomis; C. T. Patterson	1700
Warwheel, ch c by Col. Wheeler–Spainwar	2000
Rossaro, b f by Figaro–Sweet Rose; W. Engstrom	275
Talamund, b c by Altamax–Taliuda; T. E. McLaughlin	1100
Total	$15,575
Average	$741 66

PROPERTY OF T. FOX, SACRAMENTO, CAL.

Fidia, b o by Figaro–Claudia T.; W. Cabill	$ 225

Except the last named youngster all of the above were reared in Mendocino county, and judging by the size and good looks of the Burns & Waterhouse consignment, that section will soon be dotted with stock farms. That the sale was gratifying to California's former greatest racing men is exceedingly probable, and if the baby racers disposed of last Saturday are not superior to the good ones of recent years I will greatly miss my conjecture.

The racing at Emeryville, which is about up to the mark of former years, will be continued at the same place. In short, there will he no racing at fair Ingleside or Tanforan during the season which draws to a close next May. This determination was arrived at after mature reflection. It was found that Emeryville "draws" better than either Ingleside or Tanforan, many people coming from Oakland, Alameda and Berkeley that would not go to either of the courses on the San Francisco side of the bay. Then, the simple expense of moving from one track to the other amounted to $5000, every moving day, and last, not least, were the dangers encountered en route and the decided change in temperature, causing much illness and not a few deaths. In fine, race-goers like Emeryville best and patronize it accordingly, while moving was never popular with owners and trainers from either a financial or health standpoint.

Thus far the best horses uncovered in this "neck of the woods" are, to my mind: Two-year-old colt, Pelham; two-year-old filly, The Mist. Three-year-old colt, Ananias (up to and including one mile), The Mighty (as a sprinter); three-year-old fillies, Letola and Blue Eyes. Four-year-olds and upward, Claude, stallion; Gold Money, mare. Wonderfully improved horses are Ripper and Romaine, both closely approaching stake class. Gateway is a good three-year-old, too, he starting six times and never failing to finish close up. Hooligan, by Eddie Jones, is also a much improved two-year-old. Golden Buck, a son of Buck Massie, has yet to finish "outside the money." Bronze Wing ran second six successive times, then broke the spell by finishing ninth. Romaine ran unplaced the first time out, then went on and won three races, was second twice and third once. He is by the dead Brutus out of Hazel D., by George Kinney. Fossil is a most consistent little horse, his record at the meeting being five starts, two wins, one second and one third. Byronerdale has won three times out of four starts, as has Piper and Del Carina. Sad Sam's record is two wins and a third in three starts, The Mist's two wins in three starts, Sol Lichtenstein's two wins, three seconds and a third out of seven starts.

The signs of the times in the Middle West and South point to the formation of a new racing circuit and another governing turf body. Ed Corrigan, backed for a million dollars, so it is said, by H. E. Huntington, has thrown down the gauntlet to the Western Jockey Club (which is nothing if not a regular racing "trust"), and will soon fire his thirty-two pounder at the enemy. When it is considered that he can throw into the organization which he intends forming the Hawthorne, Kansas City and new New Orleans tracks, that the Worth (Ill.) and Union (St Louis) tracks will almost surely welcome the new order of things of which Mr. Corrigan is to be the director and that Latonia might join in the movement, it does not take a mighty philosopher to foresee that the organization about to be formed would at once be fully as powerful as the older body. That Capt. R. R. Rice has enough influence in his home State to have the Western Jockey Club declared a "trust" (something thoroughly abhorred in that particular section) is fairly certain, and that when this is done the two tracks at Hot Springs and the one at Little Rock will be forced out of the Western Jockey Club or not have racing at all, is also just as sure. Capt. Rice is a stern man, and his hatred of the Western Jockey Club is something akin to that of a Sicilian vendettaist whose family has been "wiped out" by a bloodthirsty neighbor. And all this bickering and strife will be a real boon to the breeders of the country. With double the number of tracks in operation in the Middle West, I expect to see the prices of thoroughbred race horses enhanced at least fifty per cent, and maybe, out of the chaos, the breeders will secure control of both organizations, a situation that should be hailed with delight by those who have the best wishes of the turf at heart.

RALPH H. TOZER.

FROM ASCOT PARK.

One especially noticeable feature of the racing here has been the extremely good work of the official handicapper who has been very successful in the hard task of bringing horses together at varying weights. In all the handicap events the contestants have been crowding one an other at the finish and in several of the events nose and head finishes have resulted. Under such conditions picking winners has been a very difficult task and consequently the handicap races have been very popular with the bookmakers. There are now thirteen regular books in the ring in addition to the two field books and the volume of money handled is quite large, although the heavy betters who were here last winter have not as yet arrived from New York. Joe Yeager is expected here in a few days. His horses have been here since the opening of the meeting, but the stable did not start anything until Tuesday of this week when Scoharie was sent to the post. Frank Reagan won a race on Tuesday with Witch Hazel, which went to the post at twenty-five to one. Mr. Reagan, unfortunately for him, did not fancy the filly's chances and failed to back her. He has lost fully $7000 or $8000 in backing his horses this winter, and let slip a good chance to even matters up. This is probably the longest-priced winner here this year, as a large majority of the races has been won by favorites.

Of the jockeys now here Hildebrand easily leads the rest, and if he continues in his present form will certainly break the world's record for the number of winning mounts in one year. Fuller was out of luck for a long time, but finally succeeded in riding a few winners. A very promising young rider is "Pudden" McDaniels, who rides a very nice race. He is a very light boy, but can finish stoutly and has already ridden his share of the winners. Eddie Walsh is riding in good form and displays great judgment in a race, placing his mount well and taking advantage of whatever chances occur in his favor. This boy may remain on the Coast during next summer, and if he does so will make a mint of money for whoever is lucky enough to secure first call on his services. Lawrence seems to have lost all form, and some of the rides put up by him are little short of criminal; he seems to be especially unfortunate when on favorites or in a big field.

Several carloads of horses have arrived here during the past week. The stables of H. Stover, J. E. King, Allen & Knight and some others came in from Oakland, and James McLaughlin arrived on Monday from Bennings. Mr. McLaughlin brought on his car Pasadena, Cataline, Oxford, Andy Mack and eight others. Pasadena is probably the best two-year-old in California today, and Mr. McLaughlin thinks him a promising candidate for the Derby.

Mr. Brooks expresses himself as being greatly pleased at the number of entries being received for the various stakes. The book containing the stake entries will be issued shortly.

The weather continues to be fine and sunny, and the large number of horses working on the track have gotten it into better shape than it was at the opening of the meeting. The track will never be a very fast one, as the soil is inclined to break away and not pack. It is, however, very safe and most horses seem to take kindly to it.

GEO. B. KELLY.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Coming Events.

Rod.

April 1-Sept. 10. Oct. 16-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed

Sept. 1-May 1—Open season for shrimp.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Sept. 10-Oct. 16—Close season for catching salmon.

Oct. 16-Nov. 15—Close season for taking salmon above tidewater.

Nov. 15-Sept. 10—Season open for taking salmon above tidewater

Gun.

July 1-Feb. 15—Dove season open.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Nov. 1-July 15—Deer season closed.

The Sale of Wild Ducks.

EDITOR BREEDER AND SPORTSMAN—A movement is on foot which has for its object some very radical changes in the game laws of this State and the session of the legislature next month will bring forth a series of demands made in line of this subject.

These proposed amendments will have the backing of a number of rod and gun organizations, and representatives of the voters of the State, in both houses, will be canvassed by delegates of the associations to use their influence in having the proposed amendments adopted. While a number of the changes advocated are in keeping with fish and game protection and would no doubt result in the general benefit, certain of the amendments to the game law are not acceptable to many sportsmen, particularly not to the majority of the people of the State.

The principal change which is causing adverse comment and has raised a strong opposition to the movement, is the absolute prohibition of the sale of wild duck and several other varieties of feathered wild game.

With good reason the farmer boys and others of the younger male residents of the agricultural and interior portions of the state are asking by what right a minority of the sportsmen of this State are endeavoring to bring about so radical a change. It is claimed that such a provision will deprive more young men, who do not have "parents with corporation bonds to clip," of the privilege and recreation of hunting than any other law on the statute books.

In many districts of this State farmer's sons and employees in manufacturing industries and others too, pursuing their various vocations in the towns and cities of the interior, could make enough money by the sale of their extra wild ducks in their local markets to pay the expenses of their hunting trips and in this way they managed to obtain several days of inexpensive sport each winter. If this change is adopted and the sale of game is denied these shooters, they will have to, in most cases, put away their guns and forego the enjoyment of shooting trips, leaving the sport over entirely to the more prosperous devotees of the gun who can stand and do not mind the expenses attendant.

The ill-feeling against this clause in the changes proposed is by no means confined to "pot hunters" but in fact exists more with young men and youths, whom the sale of a few ducks means a day's pleasures, and also the large body of so-called independent shooters than it exists with the comparatively few professional hunters who make a living by shooting for the markets. And let it be here stated clearly, there are many shooters in your city of San Francisco who sell much of the game they kill, so it will be seen that the practice is and has been for years a rather general one, notwithstanding it has the condemnation of the majority of the gun club members. And further, the selling of game killed by hunters on the club preserves is not an unknown occurrence.

As a class, the market hunters, it is said, are thriving as well as ever, through either clever evasions of the present game laws by which they have been getting their game into the hands of ready and willing buyers and receiving good prices in return, higher for some varieties than before. (Quail, venison and grouse, yes, even trout and under-sized bass, for fish have not been overlooked by those who seek to find a mart for the forbidden products of fresh and salt water.) The consumer of embargoed game and fish has to pay a high price however for the goods. One result of the present limit on ducks is that in restaurants, hotels and clubs, the price of a duck dinner has doubled and trebled.

The dreaded argument of the "market-hog" and "pot hunter" is the medium through which this obnoxious change is to be placed on the books. As a matter of fact just why this argument shall influence the legislators at all in this respect it is hard to say, for the reason it is beyond the ken of a man not imbued with the aristocratic land laws of foreign countries to discover any good reason why a man who shoots game for his own recreation, or for the market for that matter, has not just as much right to the wild game of this State, if he can obtain it within the provisions already prescribed by law, as the rich man who goes out for a few day's hunting. And here let me call your attention to another pertinent illustration in line of selling wild game. While the laws of foreign countries, generally, are so stringent and in favor of a class, so much so as to entirely preclude general indulgence in the sport of shooting, the bags made on shooting preserves by owners of the land or lessees of hunting privileges are almost invariably sent to market, save the small quantity that may be selected for the table. In fact, this disposition of the game killed is a recognized and expected source of recoupment for the great expenses attendant, directly and indirectly, upon the sport. So we have here a precedent in the selling of game that does not make the plea for our shooters an unsportsmanlike one—for the selling of game killed has the severe condemnation of those shooters who have the opportunity to get good bags and either take pleasure in dividing it among their friends or do the same under pressure of public opinion.

And while on this subject of foreign game selling let us digress a bit on another matter in our game laws, present and proposed—the killing of a doe is to be punished by a heavy fine, $100 it is claimed. Are the most enthusiastic advocates of deer law protection posted on this subject to the extent they should be when they desire to regulate the game conditions of a state covering the territory California does? Do they know that in Great Britain and on the Continent there are deer parks, where the animals have been bred, reared and protected for ages, as it were, and that the conditions that make the parks successful in their way and the attendant deer shooting good annually are the result of tradition, study and experience and the intelligent application of methods and system suggested thereby? Do the protection enthusiasts know that at certain times in these deer parks that a quota of does are killed off? Can they understand that this measure is for deer propagation—in effect protection? It possibly would be a poser, for some of them, to state that it is found necessary every few years to kill off the old does, barren ones, so that the young and virile females may get the necessary attention from the bucks. This will probably be news to some of the sportsmen who value the life of a doe, old or young, at a greater amount than the average mechanic can earn in a month.

It does not seem far-fetched to say that the advocates of deer protection, in this extreme, are as equally unqualified to pose as saviors of the wild duck, for they are not specialists in game protection by any means, but seem to jump at it in wholesale style. But let us drop the venison and get back to our mutton, or rather ducks for it is feathers that concern the majority of the shooters—the wool has envoloped, it seems, the wits of many of the protectionists.

As to the "market hunter," this individual has, like the mantle of charity, been used to cover a multitude of sins. There are methods in vogue in the getting of wild game that should be stopped. Get at the individual behind the gun—or the fellow who drags the net. This can be done and it is the proper method of stopping nefarious or decimating methods in taking wild game. Why should the majority be virtually penalized to stop the violations of the law or reprehensible work of the few when there are laws on the statute books that provide penalties for these infractions. If there has been anything in that line overlooked the more reasonable and equitable method to adjust things would be by direct application to the source of trouble by a law or laws to fit the case. You may cure a sore finger by cutting off the hand, but you will have a painful stump and a useless arm afterwards.

In spite of the fact that there have been decisions rendered on the prohibition of the sale of wild game, there are grave doubts in the minds of lawyers as to whether any law prohibiting the sale of game is constitutional. Although it is undisputed that the wild game is the property of the State, and as such, laws for its protection will be upheld, game, after it is dead through legal capture by the hunter or sportsman, *ceases* to be the property of the State, but becomes instead the property of the shooter. As such, just how laws purely prohibiting its sale have a legal or equitable foundation is a question hard to answer.

Generally speaking, the persons on whom the restriction against the sale of game places a hardship are the very ones who cannot afford to go into the courts; for the testing of constitutional questions and the law, whether valid or invalid, is an effectual prevention of their hunting. Other amendments of the game laws meet with a great deal of criticism among the shooters of the State, but there is no single clause on which there is such unison of opinion as is shown against this proposed clause forbidding the sale of wild ducks. Already many members of the legislature from the interior counties of the State have been interviewed and the situation explained to the effect that not a few of them are already pledged to do all in their power to secure the rejection of this clause from any game law changes that may be adopted.

WENNITZ DUNNE.

GOSSIP FOR SPORTSMEN.

POINTERS FOR UPLAND SHOOTING.

As favorable conditions generally prevail for field shooting and the sport from now on will be more or less in the minds of the Nimrods of the city and state for the next month or two it might be well to mention a few of the principles which, if followed closely, will tend to cultivate accurate marksmanship as far as field shooting is concerned.

All grouse, the Bob White, pheasant and quail, rise with a sudden spring and vigorous, more or less, wing action; and all, when fit, are rather swift. The real difficulty, however, is the noisy flushing, which seldom fails to affect the nerves of the novice. But owing to the fact that these birds almost invariably flush within easy range, there is no real reason for the too common hurry on the part of the gun. Let the novice remember two important points—first that his gun, rightly held, will stop any upland game at sixty yards; and, second, that probably all dead upland game hit the ground between fifteen and forty-five yards of the gun muzzle. Thirty-five yards would be a longish range for ruffled grouse, cock or quail, yet the eager novice is likely to forget that his gun actually was tested for penetration and pattern at forty yards or five yards beyond what he would consider a long shot.

While is is extremely difficult to lay down hard and fast rules for good shooting, still it might be well to remember to get on the bird smartly, then held, if too close, for there's no sense in blowing a good bird to bits. Held tight for birds going straight away about level of the eye, and the same on everything flushing near and going into thick cover. Held low on a fast bird skimming the ground straightaway; held a trifle high and ahead of quartering birds and dead on the head of an incomer. Most beginners fail on fast quartering birds, which should be the easiest, since they present the biggest marks.

The chief causes of failure are not enough allowance and the stopping of the swing of the gun as the trigger is pulled. The remedy is to get the gun well ahead of the mark, and to maintain the even swing until the shot has started upon its journey. Very few indeed are the birds missed through shooting too far ahead.

Finally, never balk at a bird which rises nearby in thick cover. Get the habit of smashing through all sorts of stuff so long as one inch on the bird is visible. More times than not cover which appears to be a hopeless mass of tangled stuff is nothing more than a lot of soft leaves and slim twigs through which shot can plow a path for many yards. Make up your mind what a bird can pass through shot can readily follow; and even should the bird vanish as you pull, don't despair. Many a choice bird falls to the veteran who shoots just ahead of where the mark disappeared.

FISH LIVE LONG AND GROW LARGE.

In a recent bulletin of the New York Zoological Society some facts are given in regard to the longevity of fishes in the New York aquarium.

The oldest inhabitants are the striped bass, which have been there for ten years, having been placed in one of the floor pools before the building was opened to the public. In May, 1894, 55 specimens, weighing from a quarter of a pound to four pounds, were secured, 27 of which have survived. Most of those that were lost died in the first year, and in the last four years not one has died.

Their food has been chiefly live minnows, supplemented by live shrimp, small crabs, marine worms and occasionally, when other food was scarce, herring cut in strips and a few clams. The largest specimen now weighs about 30 pounds.

Their actual weights are not known, but the lengths of some of them are, and the weight estimated accordingly. One bass, received in 1896, when it weighed a quarter of a pound, and had a length of seven inches, died seven years later, by which time it had attained a length of 26 inches and a weight of nine pounds. These are sea fishes which enter fresh water to spawn, and are very active and gamey. It is remarkable that such large fishes have done so well.

Other species in the aquarium which may be considered old residents are the bony gar, mud fish, common eel, gray snapper, spot snapper, red grouper and Nassau grouper. Several individuals of each have been seven years in the aquarium. They are supposed to require pure sea water just as it has been pumped from the bay in varying conditions.

Many other fishes have been in captivity there for from three to five years. The growth of some of these has been steady. The Bermuda gray snappers, received there six inches long, have more than doubled

their size in seven years, while the spot snappers have fully trebled tbeir size in the same time.

Although the green morays have fed intermittently, refusing food for months at a time, they have grown perceptibly. The growth of the muscallonge and pike has been marked, botb species having more than doubled their weight. The weakfish have trebled their size in four years

The collection of tropical fishes from Bermuda has been increased every summer. These beautifully colored strangers, which are viewed with great interest during the summer and autumn montbs, begin to die with the approacb of winter weather.

THE LONE FISHERMAN.

"Talking of strange and apparently unusual things that fish will take," said John Butler in a reminiscent way the other day, "once upon a time an honest angler went a-fisbing on Eel river. He was an unmethodical man, and had provided no lunch, so he was obliged to take the food the gods supplied in the sbape of the remains of beefsteak and onions he had for dinner the previous evening. Tbis he supplemented with a bottle containing two or tbree drinks of 'Ayden. Wbilst eating his frugal meal by the river side he flung in the water a few strips of fried onion, wben he noticed a goodly sized steelhead come up and eagerly get away with the onion shreds, although the fish had exasperatingly refused all the angling lures. Finishing his bottle he tossed it into the water and was surprised to see a couple of fat suckers make an investigation of the shining bottle. Next day the fisherman was at the same spot, when he saw a steelhead, which proved to be the identical fish he had seen before, swimming towards him with something in its mouth. This the fisb carefully deposited on the bank and then swam about close by until the fisherman examined it. The object proved to be a raw onion that had been found in the river by the steelhead and which the sagacious fish, not relishing the taste of a raw onion as well as a cooked one, evidently wanted the fisherman to take bome and fry for bis troutship's dinner."

The Dook's audience was paralyzed for tbe moment and "Hardmouth" fell on the cat. The Dook, however, concluded:

"But what was more surprising, he saw a bottle coming througb the water propelled by something or other and when he looked closer he saw about a dozen suckers shoving an empty 'Ayden bottle. One of tbe fisb beld a card in his mouth on whicb was written 'My name is Oliver Twist and its up to you to do the right tbing for me and the bunch.'"

"Your cocoanut is 'all of a twist,' John," said the President, "I think you need a vacation next week"

POINTERS WORTH REMEMBERING.

Tbere are always a large number of gunning accidents during tbe busy hunting season. Most of tbese accidents are tbe direct result of carelessness or ignorance of tbe proper way to handle a gun. Here are some rules that are "safe and sure," and might well be observed by every hnnter.

Always keep the gun pointed away from yourself and other persons.

Carry a gun witb the end pointed eitber upward toward the sky or downward toward the ground. Never sweep tbe horizon witb it. If accidentally discharged while in tbe former position no harm is likely to result, but if discharged while borizontally it may result seriously.

In getting over logs or fences always see that the gun is first put over and in a solid position where it will not fall. Then go to anotber place to climb over, and pick up the weapon with the end pointing as it should be, from yourself and companions.

Never pull or draw a gun toward yourself by the muzzle, especially in wagons, boats, over fences, logs, etc.

Do not load the gun until after leaving tbe bouse, and draw tbe loads as soon as leaving the hunting grounds.

Do not carry the gun cocked except when alert for tbe game to rise.

Do not shoot into moving bushes or in the direction of a noise without being sure the desired game is tbere and seeing it for a certainty. The movement or noise may be caused by some person or by domesticated stock.

Watcb the muzzle of the gun that no mud, snow or other materlal fills it; and do not load as heavily witb white or nitro powder as with black powder.

Do not wound game and leave it to suffer and die of its injuries. Better to spend an hour searchiog for a winged bird tban to let it remain and suffer for a day or two before being relieved by a merciful death.

Do not shoot protected birds or animals. There is a reason for protecting them. Find what it is and you will agree that the law is generally correct in giving them a protective season.

A VALUABLE COLLECTION.

Few are aware tbat the largest and most varied collection of birds' eggs in this State is owned by a Mr J. Harold Evans, who resides with his parents near Santa Rosa.

Mr. Evans is a most studious and persevering ornithologist, but like many others wbo are deep students and excel in their particular lines, be is of an extremely modest turn and does not seem to care for or court publicity, being content to follow his vocation as a salesman in one of the business houses of Santa Rosa, devoting his leisure hours to the study of his chosen profession and in making additions to his already large collection.

Mr. Evans began his researches and started his collection some six years ago in far away Maine, and among his exhibit are numerous specimens acquired at that time.

Since commencing tbe collection he has, bowever, been in communication with ornithologists in almost every quarter of the globe and has obtained many fine specimens by exchanging with other collectors, until at the present time he has eggs from Holland, England, Scotland, Alaska, in fact almost every country in the world.

His correspondence is very extensive, for there are numerous daily inquiries received by him regarding the habits and homes of different species of birds, as bis extensive researches have made him a recognized authority on subjects of this class. He also receives frequent visits from collectors of note from other states and countries.

Mr. Evans is still continuing his researcbes and studies, and spends many hours, whenever opportunity presents, in observing the habits of the bird creation as it is offered to him in his immediate environments, and he finds many interesting themes for bis consideration and solution for he immediately takes up anytbing new that is brought to his attention and never ceases his investigation until be has solved the problem.

Mr. Evans states that W. E. Bryant, formerly of Santa Rosa, has done more for ornithology than almost any other private citizen in California, and that the collection owned by that gentleman was of more than ordinary interest to the West, as Mr. Bryant's specimens were almost entirely gathered tbis side of tbe Rockies.

A Matter of Feet.

Wben tbe sportsman drops across a warm corner in some game country and has the time of his life, be is very apt to be selfish about it and speak to his fellows most mysteriously about his 'game pocket." We have dropped on a game pocket in which we find lots of sport, only the sbooting is ground game—Terriers and tbe like. In other words, we have struck a fancier who thinks wbile smoking his pipe and lolling over the ring fence. During the course of conversation at a show one day, tbe subject of catfoot versus harefoot came to tbe top. Now it seems a sine qua non that all Terrier feet should be catfeet in shape, perhaps taking the line from tbe Fox Terrier, but in the case of Irish Terriers, wbere it is said to liken them to tbe Fox Terrier, we always think of the late Mr. Krebl's dictum that an Irish Terrier foot should not be small and very compact, as tbe faddist would have it, but ratber large tban otberwise, and if we take nine Irish Terriers out of ten we shall find that the foot does look big and spreading, from a Fox Terrier man's point of view. But that is an advantage as a water dog. But to get back to our mutton, which was the catfoot. Well, it was remarked tbat the Hound, the English Hound, has the foot of this shape, and he does quite a little galloping. "Yes," broke in our friend, "and he would stand the 'ammer 'ammer a good deal better if he had a harefoot. The fact that his legs rest on stumps probably account for the toeing in and the getting out at elbow and tbe bossy shoulders that they pretty nearly all develop sooner or later. Witb a harefoot he would have more springy resistance—resilience it is termed."

This point of view set us to thinking and we remembered so many of those native hounds that run all tbe week, including meal bours, and never seem to get hully round the shoulders. "Now," continued he, "there is something I would like to bring out in the show business. It is a queer thing tbat almost all tbe standards of tbe different breeds call for a round catfoot, and judges make a strong point of this in their judging also, and make entirely too much of it. I have had considerable experience on the road with dogs, running them often 30, 40 and 50 miles in a few hours, from four to five hours, and I have seen these beautiful, catfooted dogs get so footsore that we would have to shut them up in pens on grass for a week at a time to let them rest up. There is a long, flat-footed dog lying beside me now. He bas a barefoot, and never had a sore foot in his life, and some time back wben I showed him to a prominent show judge and asked him what he thought of him, be answered, 'He is a nice racy type, but has such rotten feet.' 'Maybe so,' I said, 'but that dog never had a sore foot in his life, while these otbers you like have been crippled for days.' Of course, he had nothing more to say after tbat. Shooting men bave told me the same thing—tbat the harefoot is what you want and not tbe catfoot What is most wanted for tbe good of tbe dog is for the show men to get out into the field with the dogs and tbe field men to go to shows.

"These field men are as bad against the show men as tbe show men are against the field men. The show men could see the dogs at work and see dogs doing migbty fine work, that did not come up to A No. 1 show form and this would broaden the show men and get tbem out of their fads. On the otber hand the field men would see some beautiful dogs and try and breed their working dogs to a better type, while still retaining their good working qualities. In this way the two different classes of men would come together and eventually you would get a grand specimen of a dog."

A few more apropos remarks and our friend settled into bis collar with:

"Another thing the judges go in too much for is size, tbey want the biggest dogs, that show quality they can get. Look, for instance, at the terriers, wby the winning dogs and hitches are from eight to ten pounds over and above what their standard calls for and it is tbe same witb the big dogs. You can do nothing with a medium size Collie any more. The Collies that are winning today are great strapping big dogs, beautiful to look at, but what are they good for else? The work in this world is done and always has been by medium sized men and it is the same witb the dogs. Take the average dog with sheep or cattle and you will find it is a medium sized dog. There are two mighty fine working Collies on a farm a short distance from our place, wnich it is a pleasure to see work with tbeir large drove of cows. These are medium sized dogs—lithe, active, quick and on the go all the time and could run rings around tbe great big show chaps. But come on let's look at the Russians and see what they are like" Aon we went, all the time feeling as if our friend bad either said too much or too little.

The Ear of the Dog.

If attention be directed to the ears of some animals below man in the scale, it will be found on comparison that there exists a striking resemblance, although a very marked difference prevails in tbe relative size of the external muscles, those of the former being more fully developed. In man, owing to long disuse, they are comparatively rudimentary and useless, since be cannot employ them to move his ears in tbe same degree enjoyed by such animals, for example, as the horse and dog.

In tbese animals the auricle is loosely attached to the head, and may therefore be more effectively employed in gathering sound in the act of listening, since the largely developed aural muscles can he brought into use in preventing tbe concavity of tbe ear in different directions. Having discovered tbe source of sound, the concave surface of the auricle may, on observing tbe animal, be seen to be offered to it and kept in a more erect state—a position probably most favorable for the collection of sound. In the dog tbe entire scalp glides freely over tbe skull, thus facilitating the voluntary movemeots of the ear.

In an examination of the ears of Setters and other dogs where a strain of Spaniel prevailed it was found that the drooping ears seemed to afford a naturai shield to the deeper and more delicate parts of tbe ear, which are much exposed in these frequenters of tbe water and rovers of the field.

The cartilage of the pinna, is no larger tban in breeds carrying their ears erect, being absent in the most pendant part, and that portion composing the commencement of tbe auditory canal is much dilated, forming a very large concha, wbich, when the external ear is in repose, is folded up thus protecting tbe ear from the entrance of foreign bodies, etc.

When tbe pendant portion of the auricle is lifted up, so as to afford a better view of tbe entrance to the external auditory canal, there are to be seen a number of speculae, formed from tbe outer margin of the collapsed walls; one of those, larger than the rest, seems to correspood to the tragus in the human ear. When the animal is on the alert in listening, tbe drooping auricle is lifted up and expanded and the pliant cartilage unfolded, tbe act being performed by the retrahens aurem and attollens aurem, wbicb muscles together lift the auricle backward and upward with great energy, thus bringing a most efficient sound-collecting trumpet into use. Tbe hearing is possibly further improved in tbe field by the constant motion of tbe dog's head, his ears being thus frequently thrown up, the act giving greater exposure to tbe concha.

Tbe act of expending tbe auricle would seem to render the drum-bead more tense, and per contra, the dog is observed to droop bis ears to loud and disagreeable sounds, tbe drum-head being probably relaxed in this way, wbile at the same time sound is more completely excluded by the collapse of the cartilage and the overlying and pendant auricle. In this manner more or less complete muffling of the sound transmitting mechanism takes place, without which the sensitive hearing organ which those animals possess would be liable to injury from loud sounds

DOINGS IN DOGDOM.

VICTORIA KENNEL CLUB.

Tbe Victoria Kennel Club at the recent annual meeting elected the following officers: President, J. W. Creigbton; Vice President, Dr A. J. Garesche; Secretary, T. P. McConnell; Treasurer, T. Plimley; Superintendent, F. Turner.

A committee was also appointed to arrange for a series of parlor dog shows and other entertainments during tbe winter months. The club will bold a spring sbow early in April. A popular Eastern judge will be seen in tbe ring.

WHITEWASHING UNSEASONABLE.

A Portland monthly publication has recently attempted to score the Western Kennel Lesgue for perpetually disqualifying one Bradshaw, a dog bandler, for "reprehensible conduct in connection with dog shows."

After berating the W. K. L. with a general and irrelevant string of accusations the effort is made to show that tbe delinquent was a muchly abused individual and that "it is such action as the disciplining of Bradshaw that has always mitigated against a sportsmanlike spirit and driven many a good man out of camp. It is not necessary to deal with the merits of the case."

The merits of tne case and the reason for wbich Bradshaw was disqualified was that Bradshaw without authorization kent tbe Glen Tana Collie entries from tho Los Angeles show.

He told the writer at the San Jose show in response to a question, that he was not going to Los Angeles "there was nothing in it" and that he "would send Griffith's dogs back tomorrow" (Sunday).

A letter received subsequently by the writer from Mr. Griffith expressed surprise that his dogs did not get to Los Angeles—"I entered my dogs at Los Angeles and am surprised and do not understand why they did not go."

The writer showed the letter to Bradshaw wbo was sitting in a chair in our office, not three feet away at the time, and queried "What is the matter with

Griffith?" There was no verbal response, but Bradshaw's jowls became suffused and his face assumed the expression of a spanked ham.

Possibly this matter would never have been taken up had not there appeared in print, sanctioned by Bradshaw, a scurrilous inuendo that the Griffith dogs were kept away from Los Angeles so that the field would be clear for a local dog to win. This could not be passed by a gentleman fancier of Los Angeles and when the matter was sifted to the bottom, the result was the disqualification of Bradshaw and F. H. Kirby. The latter's delinquencies were of a different nature from the former's.

The Los Angeles gentleman was vindicated easily and a burgler was "hoist with his own petard."

Bradshaw in a recent published communication now attempts another phase of the alleged "juggling" game in which he endeavors to impugn the character of another fancier, and also the integrity of the Los Angeles club officials.

It is a fairly clever composition, but comes rather late in the day. Bradshaw was advised of intended proceedings but never, we are informed, made any defense and now resorts to ex parte statements which are discreditable to him and tainted with a flavor of the homemade brand as well.

Mrs. A. A. Roi, a local fancier whose specialty has been Yorkshires and Maltese Terriers and who has been a well-known exhibitor at many past shows in this city, has recently, we regret to note, been in ill-health and will go south to Redlands this week, there to seek rest and the return to health that we are sure will be hopefully wished for by many of our doggy readers to whom Mrs. Roi is favorably known.

Big Catch of Striped Bass.

The salt water angling fraternity had a gala time on San Antone creek, last Sunday, for it was veritably a finny reception day, and the gamey striped bass were entertaining the corduroy and gum-booted visitors with a cordiality and vim that was unprecedented in the local history of striped bass fishing. The fleet of trolling boats accounted for one thousand or more pounds of bass, for about 200 fish were taken.

A puzzler concerning this catch is that the fish on that day almost entirely ignored the trolling spoon and assiduously devoted their attention to the flaccid clam bait, whereas on two or three days prior to the big time the fish were ravenous for the metal lure.

Notwithstanding the threatening weather, for a heavy tule fog hung over the creek and surrounding marsh, all of the fishing contingent who had not gone to either Russian river or Point Reyes for sport with steelheads, that day journeyed to the striped bass rendezvous on the Petaluma marsh in the vicinty of Burdells. Among the talent present were Al Hudson, Pete Ashcroft, Al Cumming, Billy Burlingame, Jack Sammi, Charley Miller, Johnson and Bliss, G. Gilchrist, Billy Hillegass, Jabe Swan, Bert Spring, Billy Street, Professor McFarland and others of the clam flipping bunch.

The tule fog hung over the fishing ground, but not a man jack of the pilgrim band felt a chill, for the warmest day's sport ever had on the famed slough was on—from "sody to bock," as one of the old-time sports present remarked.

The enthusiastic shouts of the younger anglers were in unison with the thrilling cadence of the reels as one strike after another and another of the spike-finned prizes hooked brought the gaffs into constant play landing the fish in the boats.

The late Chas. Emeric was blessed time and again for one of the greatest days of salt water fishing yet experienced by local anglers for 'twas he who had the striped bass planted in our waters. The fish were all of good size, ranging from seven to twenty-two pounds. The fighting qualities of this fish, it seems, had greatly improved also, for most of the bass taken put up a lively fight. Coming over on the Ukiah Sunday evening the lower deck of the ferry boat looked like a "dago" fish market in full bloom.

Conditions last Sunday were favorable in various respects for the anglers, tide and weather seemingly being just right. As to the weather conditions there must have been certain all round beneficial elements, for duck hunters in the vicinity of the fishermen, in fact throughout the whole marsh country of Sonoma and Solano counties, had one of the best shoots in many years.

Among those lucky fishers Al Cumming was high hook with seventeen fish, the smallest of which scaled six pounds. Bert Spring's largest fish were nineteen and fourteen pounders. Ashcroft caught five fish; one weighed nineteen pounds. Miller took eight. Hudson landed ten. Jack Sammi accounted for more than a dozen fish. Jas. Lynch caught nearly a dozen fine bass. Hillegass had a good showing, several being largo sized fish.

The fishing conditions looked so favorable that a number of those who had such a grand time on the first day of the week have visited the stream on various days during the past week. While the sport has been good, it was not up to the mark of last Sunday.

Duck Hunters Jubilant.

The recent cold spell improved duck shooting conditions wonderfully for the main body of shooters, who were out last Sunday. Results generally on the Suisun, Sonoma and Petaluma marshes were better than the sportsmen had enjoyed for years past.

The recent reduction of the bag limit by the Sonoma county fathers seems to be most ohnoxious and meets with an almost general indifference by hunters.

The best shoot the Empire Gun Club members have had on the Elkhorn slough preserve was bad last Sunday; there were fifteen shooters present and limit bags were the rule.

Quail hunters have found good shooting in the vicinity of Valley Spring near Santa Rosa. Birds are plentiful and that section is good ground to hunt over.

What Ducks Like.

Professor Willis L. Jepson of the University of California, department of botany, recently made an investigation of the feed conditions in the Suisun marshes, and reports that by chance he has discovered the nature of the supply of food in these regions that makes them so tempting for the thousands of wild geese, canvasback and widgeon ducks that annually flock there. It has never been known just what lured the water fowl to these grounds. Under the belief that it was the visible feed, and fearing that this was gradually dying out, the sportsmen interested in the Suisun preserves invited Professor Jepson to study the conditions there. The Berkeley scientists found dry stalks of the fennel pond weed on the surface, but it was not until he pulled up these by their roots and investigated their submerged stems that he found small succulent tubers growing at their base. These secreted a rich oily substance, comparable to hurr oliver, and this he had no hesitancy in pronouncing to be the dainty food on which the water fowl have been fattening for so many years.

Plentiful in the Bay County Marshes

The Catch of the Parson and the Professor

GOOD FOR ALL.

Several matters of importance to dog show exhibitors and fanciers have been decided upon at the quarterly meeting in New York of the American Kennel Club. Representatives of clubs in several cities were present.

Among other things it was determined to admit to the list of recognized breeds Owtchars, the new sheep dogs brought from Russia; Esquimaux, Mexican Hairless, German Sheep Dogs and Pekinese Spaniels, the latter under the title of Chinese crested lap dogs.

The delegates also voted in favor of a quicker system of sending out championship medals to the dogs that win the necessary points by capturing winners' classes at bench shows, and to keep a better record of the standing of each dog in its progress toward distinction It was voted that hereafter an American Kennel Club certificate of the win shall be issued forthwith to the successful dog in every winners' class, and that also a separate index of all such classes shall be kept at the office of the American Kennel Club, which will show the exact place of every dog in the race for a championship title.

This is a long wished for move in the right direction and has in the past created no little criticism.

Steelhead Fishing.

Good fishing has prevailed in the Russian river, near Duncan's Mills, until within the past few days. Prior to that time a number of local anglers enjoyed splendid sport taking large-sized game steelhead trout. The water was clear and not too high and fish were plentiful, but suddenly the fish were not taking bait or lure and there was a cessation in the sport. Several local fishermen went up a day or two ago, not being aware that the good conditions were on a temporary slow down, it is believed they are a few days too late; however, their movements are under observation by others who are ready to go up to Duncans at the first indication of any fishing.

Fly-Casting Tournament.

There will be a tournament for merchandise prizes—3 trophies in each event, at Stow lake tomorrow morning, beginning at 10 o'clock The members of the Fly-Casting Club who enter the contests will be handicapped. There will be a lunch served at noon in the club house.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

A Wonderful Rifle Shot.

On the St. Louis Exposition grounds, November 10th, in the presence of a large crowd, Adolph Topperwein, shooting Winchester Automatic Rifles and Winchester Greaseless Bullet Cartridges, broke 3507 clay discs, 2¼ inches in diameter without a miss. The targets were thrown into the air by hand at a distance of 25 feet from the shooter. Had it not been for darkness coming on, Champion Topperwein might have added a thousand more to his world-beating score. As it was, he "hung up" a new world's record so high as to put it almost out of reach. In doing this wonderful shooting, Champion Topperwein used two .22 caliber Winchester Automatic Rifles and Winchester Greaseless Bullet Cartridges. The score beats adjective in telling of the absolute accuracy and reliability of Winchester Rifles and Cartridges, and the fact that neither rifle was cleaned at all during the shooting, shows what a wonderful improvement Winchester Greaseless Bullet .22 caliber Cartridges are over other kinds. If you want the most improved and up-to-date product in the gun or ammunition line, just insist on having Winchester make and you'll get it.

Jackson's Napa Soda does not tangle the feet.

THE FARM.

Poultry For Market.

All fowls should he fasted from twenty-four to thirty-six hours before killing. Where this is not done the feed decomposes in the crop and intestines, the result being that the flesh becomes tainted and does not keep well.

There are two methods of killing that are considered proper. One is to kill by bleeding, which is accomplished by making a deep incision with a sharp knife in the roof of the mouth immediately below the eyes. This method is considered to he the better one in the Eastern states and also in some parts of Canada. The other method is to kill the bird by wringing or pulling the neck. This is done by taking the chicken in the hand, stretching the neck, holding the crown of the head in the palm of the hand and giving a quick turn backward and at the same time a steady pull This method is favored by the exporters of dressed fowls and is much cleaner than bleeding the fowls. It is claimed by the exporters that the flesh will keep longer and will not he so dry as where the birds are bled. I prefer the latter method.

After the bird is killed plucking should begin at once. Care should he taken to keep the head downward, to allow the blood to collect in the neck. Where the birds are allowed to become cool before being plucked it is hard to avoid tearing the skin, and the plucking is more tedious. The birds should he plucked clean, with the exception of about two inches of feathers adjoining the head.

Many good chickens are spoiled by being packed before they are thoroughly cooled. Care should he taken that all the animal heat is out of the body before the fowls are packed. We always cool the birds at least twelve hours before packing them.

The chickens are packed in boxes. The box is lined with parchment paper, and if the chickens are to he shipped a long distance each bird is wrapped in paper. This prevents the chickens from bruising each other and at the same time, to a considerable extent, checks decomposition. Do not use ordinary wrapping paper, as it draws dampness and will cause the chickens to become clammy, which makes them more or less unsalable.

There are several kinds of boxes used in shipping poultry. Nearly every exporter has his own shape of box and his own method of packing. For shipping locally we use a box three feet long, twelve inches wide and twelve inches deep. The box will hold thirty-six four and one-half pound chickens. The boxes are made strong, so that we can have the dealer return them to he refilled. Do not use cedar in the construction of the boxes, as in some cases it taints the flesh. Basswood or spruce answers well.—*W. R. Graham in Chicago Tribune.*

The difference in customers is well worth the effort to seek good ones, and to hold to them, and to let the undesirable ones go, as soon as it is discovered that they are undesirable.

Doctoring Poultry.

The average poultryman should he very careful of the medicine with which he doses his flock, as sometimes the medicine is as had as the disease, sensibly advises Brice Haynes in *Poultry Success.* The cheapest and best medicine we have been able to get is ordinary plastering lime. It sells for $1 a barrel in our town, and a little goes a long way and does lots of good while it is going. I have not had any cholera on my place for six years, and I attribute the general good health of my fowls to the liberal use of lime. Some of the good uses I have found for it are as follows:

When I see signs of soiled feathers I throw a little lime in their drinking water. It seems to he a good regulator.

It is a good disinfectant and after cleaning the dropping board throw a handful down. It is wonderful how lime will kill all bad odors.

Use lime mixed in the dust box. The lice won't loaf around there much. I notice they won't take many steps in the lime until their relations send for the undertaker.

When one of your hens gets ready to take the regulation three weeks' layoff throw some lime in each corner of her nest. Some lime thrown down around outbuildings will dry up the wet places.

When your hens are laying soft shell eggs throw lime where they can get it. I have seen limewater stop a threatened case of cholera in good shape.

Jackson's Napa Soda untangles the feet.

It is said that a serviceable paint for farm buildings can he made by thickening sour milk or butter milk with Portland cement, and metalic paint powder to the consistency of ordinary paint. Sour milk is considered better than buttermilk, as it contains more grease. It is necessary to keep it well stirred as the cement settles quickly.

The fancy and favorite meat with the French is veal, and the calves offered for sale are fattened to perfection. They are two months old, when killed, and are as fat as butter. They are about 100 pounds heavier than American veal, weighing about 250 pounds.

Not only do dairymen have their troubles. The Pennsylvania Food and Dairy Product Department has begun a campaign against sausage. Just what is impure in these links is not definitely stated.

Grasses build up the soil. They are the natural covers for the bare spots, and preserve the soil from washing, and from the baking sterilizing effects of the sun, and finally make the soil fertile.

The scrapings from the barn yard hauled to any field on the farm make a good fertilizer and if placed on the meadow will protect the roots of the grass from the winter rains.

Hogs in the French markets are not equal to ours in quality. They usually sell high, although they would he regarded by Americans as "skips" and "scalawags."

Too much care can not be taken in the proper salting of hides. Before shipping it would be a good plan to write for instructions to some reliable hide merchant.

Because of the surface conditions on a farm, the farmer needs to he especially careful about the water he uses. Both cistern and well water may need attention.

Wheat can be grown in the Alps at an elevation of 3600, in Brazil at 5000, in the Caucasus at 8000, in Abysinia at 10,000, in Peru and Bolivia at 11,000.

It isn't the number of steers one has in the pasture that makes him a ranchman, but the ability to manage them, he they many or few.

Grazing in Forest Reserves.

The American Forest Congress at its meeting in January next will devote one day's session to a consideration of the relation of the public forest lands to grazing. Only those who thoroughly understand conditions in the West can appreciate how important is the question of grazing in connection with the welfare of the forests. Grazing is the principal industry of nearly half of the United States. The arid region of the country includes about two fifths of its entire area, from about the middle of the continent westerly nearly to the Pacific Ocean, and the greater part of this region is natural grazing land, mainly open, but much of it, particularly in the more mountainous parts, forested or partly forested. The forage varies from the scanty vegetation of the deserts to the thick turf of the mountain parks and the varied growth of herbage and young trees found in the interior of the forest. During the excessive heat of summer it is customary to drive the cattle and sheep up into the forests, where the air is cooler and the pasture better. This means that the young growth is trampled and browsed and the spongy forest soil packed or cut by hoofs, so that floods and serious soil erosion often follow, while the prospects of forest reproduction are greatly endangered. Hence it is often necessary to exclude both sheep and cattle, though the regulations are generally more rigid against sheep, which do the worst damage.

That the land best suited to grazing should be given over to it is self-evident. But neither the public domain nor the forests should be overgrazed. Forests are essential to irrigation plans for reclaiming arid lands The fact that sheep successfully graze upon areas partly or wholly inaccessible to cattle has led sheep men into high mountains and about the headwaters of streams, where speedy and great damage can be done the protective influence of the forests. In addition, sheep are generally herded or concentrated on small areas; thus their grazing has an intensive character peculiarly destructive. For these reasons, and because of special local conditions, sheep are entirely excluded from some forest reserve, while in others their grazing is more stringently regulated than that of cattle.

Hitherto there has been continual conflict between the sheep and cattle men for grazing locations, and the limitation of the claims of each in the reserves has been one of the most embarrassing and difficult questions of forest control. Happily, through a recent conference at Denver, there has been the fullest and most amicable interchange of views in the history of the business. It is expected there will be less friction between them in the future than in the past.

That the Bureau of Forestry keenly appreciates the importance of the grazing question is shown by the instructions it gives its field force examining lands with a view to forming new reserves or revising the boundaries of existing reserves Its agents must give definite and full reports on all the following queries: Demand upon the range; to what extent the prosperity of the local reserve depends upon live stock; how many stock are now using the reserve, and how distributed; where owned; whether stockmen own ranches or reside in the reserve; their home residence; to what extent, as a summer range, the proposed reserve limits outside range; whether it includes lambing grounds; conflicting interests, as between sheep and cattle, local and outside stock, etc.; merits of the controversy; description of the character of the grazing lands; the extent of open parks and pasture in timber; to what extent grazing has injured the range or forest; the manner of handling stock; the size of herds or bands; areas, if any, from which stock should be excluded; division of pasture lands; recommendations for a plan of control; giving the number of stock and length of grazing season to be allowed, and any special regulations necessary; and the practicability of a division of range into individual ranges. It is only after exhaustive examination and full report that action is taken limiting grazing rights.

The forest reserve policy of the National Government involves many important questions which are yet to be settled. The approaching American Forest Congress, to be held in Washington, D. C., will give the best opportunity that has ever been offered for their broad discussion. The meeting has aroused wide interest among cattle and sheep men and their associations. A large represention from the grazing industry is expected at the Congress, and far-reaching good is likely to result from its deliberations.

They Favor a College Farm.

The California Live Stock Breeders Association is behind a movement to secure the passage of a bill at the coming session of the Legislature providing for the purchase by the State of a university farm for the use of the college of agriculture of the University of California. A meeting of the board of directors of the association was held at the Palace Hotel last Saturday for the purpose of considering such a bill, and the directors agreed upon the terms and provisions of a bill that will meet, in their opinion, the approval of the entire agricultural interests of the State.

The bill provides for the appointment of a commission to select and purchase a university farm, the commission to consist of the Governor of the State, who shall be president of the commission; the president of the State University, the Lieutenant Governor of the State, the Chief Justice of the Supreme Court of California and the president of the State Board of Agriculture The commissioners will receive no compensation. The commissioners are empowered to select and purchase the agricultural college farm, the location of which is to be convenient to the university, and they are empowered to acquire all necessary water rights, canal, ditch, flume or other rights for flow or transmission of water for irrigating purposes. The farm is to be placed in the possession and under the management of the Regents of the State University, who are empowered to provide for the purchase of supplies, implements, machinery and apparatus, the planting of trees and the employment of laborers.

The Regents shall also appoint the necessary instructors and inangurate and provide for the conduct of instruction in practical and scientific agriculture, and in such other branches of learning as are allied thereto and as are calculated to better qualify and inform students in the theory and practice of agriculture. It is provided that this instruction shall be conducted in connection with and as a part of the college of agriculture, provision being made by the Regents for such attendance on the farm of the college student as may be deemed best and necessary to the completion of their college course. It is provided that the university farm shall be conducted so as to meet the needs of persons who desire instruction in agriculture, horticulture, animal industry, dairying and poultry raising and shall also be used for experimental and investigation work in connection with the agricultural experiment station of the University. The directors of the Live Stock Breeders' Association did not decide what appropriation would be needed for the purchase and equipment of the farm, but it was agreed that the sum should be somewhere between $250,000 and $500,000.

Those of the directors who were present at the meeting and approved the provisions of the proposed bill were President Charles D Pierce, Professor E. W. Major, of the State University, General W. R. Shafter, Judge Peter Shields of Sacramento, J H. Glide of Sacramento, A. B. Evans of Fresno, Isaac Bird of Merced and William Pierce of Suisun.

KENDALL'S SPAVIN CURE

KENDALL'S SPAVIN CURE

STATE AGRICULTURAL SOCIETY

OCCIDENT STAKE OF 1907

TROTTING STAKE FOR FOALS OF 1904

To be Trotted at the California State Fair of 1907. Entries to Close January 1, 1905, with L. R. MILLER, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which $10 must accompany nomination; $15 to be paid January 1, 1906; $25 to be paid January 1, 1907, and $50 thirty days before the race. The Occident Cup, of the value of $400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1907 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1905.

L. R. MILLER, Secretary. B. F. RUSH, President.

SAVE-THE-HORSE

Registered Trade Mark

SPAVIN CURE

$5.00 per bottle. Written guarantee with every bottle, as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Positively and Permanently Cures

Bone and Bog Spavin, Ringbone (except low ringbone), Curb, Thoroughpin, Spavin, Capped Hock, Shoe Boil, Wind Puff, broken down, sprained, injured and ruptured Tendons The fire iron is uncertain, and invariably only aggravates disease or injury; blistering is less effective—both necessitate laying horse up. Mercurial and poisonous compounds produce irreparable injury. 'Save-the Horse" eliminates all these factors. Cures without scar, blemish or loss of hair. Horse can be worked as usual Copy of guarantee, valuable booklet on diseases and injuries affecting horses, and copies of personal letters from bankers, noted trainers, manufacturers and business men of prominence the world over, telling of the wonderful cures it made for them, sent upon application. We advise frankly of possibility of remedy in any specific case. Give explicit particulars; state age, location of swellings, lameness, and the way the horse holds and carries the leg. $5.00 per bottle at all druggists and dealers, or express paid. TROY CHEMICAL CO., Manufacturers, Binghampton, N. Y (formerly of Troy, N. Y.)

ROBIZOLA 2:12 1-4 (trotting)

By Robin 28370; dam Myrtle by Anteeo; second dam Luella by Nutwood ROBIZOLA is a handsome bay mare, 7 years old, stands nearly 16 hands and weighs about 1050 lbs.; absolutely sound; excellent roadster and high-class race horse and brood mare. Can be seen at Morton's stable, cor. Geary and Leavenworth streets, San Francisco. Address

DR. J. W. CLARK, Santa Rosa.

PACING 2:11 1-4 **RITA H.** TROTTING 2:14 1-4

FOR SALE.

RITA H. is by McKinney 2:11 1-4, dam Smut by Prompter.

She is a dark brown mare, stands nearly 16 hands high and weighs in racing trim 1050 lbs. In 1903 she started eight times on the Washington and Oregon Circuit, won her first seven starts and only lost four heats during the entire circuit, getting a pacing record of 2:11¼. In 1904 she was converted to the trotting gait and proved herself a consistent performer, winning most of her races in fast time and getting a trotting record of 2:14¼. She is six years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Her owner has driven her in 2:12½ (pacing) in the Los Angeles Driving Club races, she having won all but one in which she started. This mare is all right and there is not a thing the matter with her but my business demands are such that I cannot afford to devote any time to racing. For prices and further particulars address

BYRON ERKENBRECHER,
301 Currier Bldg, Los Angeles, Cal,

FOR SALE.

ONE OF THE BEST BRED TROTTING FILLIES on earth. Perfect in every respect.. Sired by one of California's greatest sires. First, second, third and fourth dams are producers of early and extreme speed, and have twenty in the list. Combines the three great strains—Electioneer, Wilkes and Nutwood She is the acme of scientific breeding, will make a fast trotter and worth her weight in gold for a broodmare. Fifteen great dams in her pedigree.

Also, Princess Leola, gray mare 5 years old, 15 2½ hands, sired by Leonel 2:17½; 1st dam Lady Dwyer by Menlo 2:21½, son of Nutwood 2:18¾; 2d dam Silver, dam of Marin Jr. 2:13 and Hattie F. 2:18 by Silver threads, son of The Moor; 3d dam Gertrude, dam of California Maid 2:23½ and Native Son (3) 2:29¾ by The Moor. A splendid roadster and a promising young broodmare; has had one foal; never trained.

And Juanita by Gen. Benton 1755; 1st dam Juniatta, dam of Elector 2:25 by St. Clair 656; 2d dam Maid of Clay (dam of 4 in 2:30) by Henry Clay 8, in foal to Lecco 2:09¾.

A beautiful yearling filly by L. W. Russell, and a bay weanling colt by the great Searchlight 2:03¼, a perfect counterpart of his illustrious sire. Both these youngsters are out of Juanita, and all are standard bred and eligible to registration. For further particulars address

C. C. CRIPPEN, Mayfield. Cal.

FOR SALE.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET.

IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS AND BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.

It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.

It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—A FOOT WHICH WILL STAND WORK on race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CERTAIN CURE for THRUSH and SCRATCHES

We Guarantee That It Will Do What We Claim and Will Refund Money If It Fails.

PRICES:—Quarts, $1.00; Half-Gallon, $1.75; Gallon, $3.0 2½-Gallon, $5.50; Five-Gallon, $10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.

Don't fail to read "ad." giving information concerning Campbell's Iodoform Gall Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

C. O. STANTON, San Jose Manager.

Three-Legged Horses

are not curiosities by any means. The country is full of them. The fourth leg is there all right but it is not worth anything because of a curb, splint, spavin or other like lameness. You can cure the horse of any of these ailments and put another sound leg under him by the use of

Quinn's Ointment.

It is time tried and reliable. When a horse is cured with Quinn's Ointment he stays cured. Mr. E. F. Burke of Springfield, Mo., writes as follows: "I have been using Quinn's Ointment for several years and have effected many marvelous cures; it will go deeper and cause less pain than any blister I ever used. Thought it my duty for the benefit of horses to recommend your Ointment. I am never without it." This is the general verdict by all who give Quinn's Ointment a trial. For curbs, splints, spavins, windpuffs, and all bunches it is unequaled. Price $1 per bottle at all druggists or sent by mail. Send for circulars, testimonials, &c.

HIGH GRADE AMMUNITION

U. M. C. POPULARITY NEVER WANES

RESULTS: MOST SATISFACTORY

YOU WANTED BADLY

to bring home as large a bag of ducks from the marsh as your neighbor, but you forgot

THE MAIN FACTOR OF SUCCESS

which rested in the brand of ammunition you used. There is no need of talking about other brands bringing equal results when all successful sportsmen agree that

U. M. C. AMMUNITION HAS NO EQUAL

and that the best results come from its constant use, either in the field or over the traps. Better try it!!!

This sign has been up for more than 40 years. It is familiar in every household in California. It is a veritable trade mark, and represents the very best in the field for which it speaks. Thousands of successful business men look upon it as a familiar friend, for through it they got their start in the business world. It represents more to-day than it ever did before, for HEALD'S BUSINESS COLLEGE is better today than ever. Every year adds to its experience, its strength, its prestige, its equipment, its usefulness, and its popularity. The demand for its graduates is growing every year. In addition to the hundreds of graduates placed in excellent positions during the past twelve months, and notwithstanding the fact that more than One Thousand pupils were enrolled during the year, we were compelled to decline fully Five Hundred additional requests to fill responsible and lucrative positions for lack of more graduates.

Get your business education where the business opportunities are.

A poor school is dear at any price. A good school is cheap at any price.

603 MISSION STREET, SAN FRANCISCO.

Quinn's Ointment

Will Make A Horse Over;

will put sound legs under him and will save him from the cheap hawker and trader. It is the standard cure for Spavins, Curbs, Splints, Windpuffs and all the various lumps and bunches of like kind. Keep it always on hand and you will be prepared when trouble comes. Leading horsemen everywhere know it and use it.

Mr. H. H. Clark, Fredonia, N. Y., writes: "The bottle of Quinn's Ointment purchased from you about two years ago removed a curb and thoroughpin and did it for good. My horse's leg is as smooth as ever."

Price $1.00 per bottle. Sold by all druggists or sent by mail. Write for circulars, testimonials, etc.

A MERRY CHRISTMAS and a Happy New Year to all its readers is the greeting extended by the BREEDER AND SPORTSMAN with this number. We hope you will all enjoy the delights of the holiday seasoo in the greatest measure and that the perusal of this issue of the paper with its many handsome Illustrations will not be the least of your pleasures. We take this occasion to thank the friends and patrons of this journal for their very generous patronage during the year which is just closing, and trust that it has heeo a source of profit to one aod all. The year has been a prosperous one for our whole country, and with the hope that these conditioos will continue through another year we again extend to our readers iodlvidually and collectively the compliments of the season.

A BRIGHT FUTURE is io sight for the California State Agricultural Society and the State Fair is not to be a thing of the past, but a great feature of the State in the years to come. The old State Fair grounds have heen sold, the sale confirmed, a new eighty acre tract purchased just outside the city limits of Sacramento, and the outlook now is for a better State Fair than ever. All that is needed is for farmers, stock breeders, fruit growers, miners and maoufacturers to pull together to see that the California State Fair is given fitting accommodations and that it is conducted for the interests of the producers of the State's wealth.

DEXTER PRINCE IS DEAD.—Just before the last forms of this issue were to be put to press, "Sandy" Smith, trainer at Mr. A. B. Spreckels' Aptos Farm, oear Santa Cruz, came in with the informatioo that Dexter Prince died last month. Dexter Prince was one of California's greatest sires and his death is a loss to the breeding interests of the whole couotry, although in the natural course of things he could not have heen expected to live many more years as he was foaled in 1879 and therefore in his 26th year. An extended notice of this great sire is necessarily postponed until our next issue.

Live stock hreeders who sell the products of their farms on the Pacific Coast should remember that the only first class auction house to sell horses, whether thoroughhreds, standard hred or draft stock, is at Fred H. Chase & Co's popular old stand at 1732 Market street, this city. This firm is successor to the old reliable firm of Killip & Co., whose acquaintance with the hreeders of this Coast dates back to the day when mining was the leading industry. The same plan of conducting sales estahlished by them is being continued hy Mr. Chase and fair, square dealing is the rule, prompt settlement for every horse sold being made to the owner the same day or the next morning after the sale. Chase & Co. sell horses and cattle and their auction sales of hlooded dairy and heef cattle have heen very successful. If you want to sell correspond witn Fred H. Chase.

M H. McManus, the well known trainer and race driver, has located at Pleasanton track where he has opened a public training stable. Among the horses that 'Mike" has trained and marked are Loupe 2:09½, Dan M. 2:09½ on a half mile track, Henry F. 2:90¼ on half-mile track and the little whirlwind Freddie C., now known as Prince Direct, that was given a record of 2:14 hy McManus and afterwards paced in 2:07 over East and with Direct Hal holds the world's pacing record of 2:05½ for a team Mr. McManus is a good trainer and his terms are reasonahle.

Mr. Martin Carter. owner of Nutwood Wilkes has called our attention to the fact that his stallion is not the sire of Lady Mowry 2:28 as given in the list of new 2:30 performers printed in nearly all the Eastern horse papers. Mr. Carter says he wants the records kept right and that Lady Mowry is hy McKinney but is out of a mare by Nutwood Wilkes.

Credit Where Due.

A letter was received at this office a few days ago from far off Iowa, and as it is an entirely unsolicited endorsemeot of a trainer and horseman who has been a resident of that State less than two years we give it place in our columns. The letter reads as follows:

OFFICE OF DAWLEY, HUBBABD & WHEELER, ATTORNEYS AND COUNSELLORS AT LAW.

CEDAR RAPIDS, IOWA, Dec. 12 1904

EDITOR BREEDER AND SPORTSMAN:—Dear sir. I notice that Mr. James W Zibbell of your city is building a fine training and boarding stable at 672 to 680 11th Avenue, San Francisco. This means, I suppose, that Mr. Zibble is going to make San Francisco his home. He will prove a valuable acquisition to the ranks of your horsemen. He trained for me many years ago. I found him thoroughly honest, sober, industrious and capable. He knows the business from colt breaking to race driving, and is always to be depended upon. I hope that he may have the success which he deserves. Yours truly, C. E. WHEELER.

In reference to the above we will say that Mr. Zibbell's stable is now completed and he has quite a number of horses there owned hy different parties. With his son Willard he has met with success in California during the past two years. Zibhell senior drove Almaden 2:22¼ to victory in the two-year-old division of the Breeders Futurity last year, and also trained and drove that good two-year-old Athasham 2:20 this year, besides several other good winners. Willard Zibbell trained and drove Nance O'Neil 2:09¼ in all her races this year and is a rising youog reinsman. We hope they will meet success in their new venture on which they have expended nearly ten thousaod dollars.

Tourists who visit Sao Francisco find the Palace Hotel one of the great features of this city by the sunset sea Its locatioo right in the heart of the city makes all other points of interest relative to it. The Grand Court and Lounging Room with its palms, the Court Cafe, the Empire Parlor, the Louis XV Reception Room, and the New Ball Room are fitted in the most luxurious style and some idea of their beauty can be obtained from the views on the last page of the cover of this issue. The Palace easily leads all the great hotels oo the western slope of the contineot.

Ooe of the most popular hotels in San Francisco is The Lick, situated oo Montgomery Street, near Market, one of the most convenient locations in the city. Uoder the mangement of Mr. Geo. W. Kingsbury The Lick has been completely modernized and is one of the most elegantly furnished of this city's great first class caravansaries. The oew Grill Room is ooe of the hest conducted on the continent.

With the East View Farm horses that reached Pleasanton last week in charge of Chas. DeRyder was Phantom the two-year-old colt hy Boreal that James Butler paid $10,000 for a few weeks ago. Phantom showed a trial mile in 2:15½ before Mr. Butler bought him. He is well staked and is a grand looking colt.

A. B. Rodman, of Woodland, has two fast young roadsters for sale. One is a four-year-old black gelding, a trotter, and the other a chestnut six-year-old double gaited gelding. Both are sixteen hands high.

It is stated that C. J. Hamlin is critically ill at Buffalo, and is not expected to recover. His death will remove the foremost mao in breeding circles in this country.

High class park horses have become so valuable that trotting horsemeo are huyiog fast horses for this purpose. They find a ready sale for them.

Horses to the number of 31,650 and valued at $2,308,383, were exported from this country to Europe during the first eight months of 1904.

Sulky Troubles.

The editor of this paper receotly asked W. J. Kenney, the well-known sulky wheel builder, if he could not say something about sulky troubles which worry trainers so much every year, and Mr. Kenney replied as follows:

"The principal troubles that the majority of horsemen have with pneumatic sulky and cart wheels are owing to the fact that they are not properly lined up or the bearings are not correctly adjusted. There is oo secret to either. Every trainer should know before he starts in a race whether his sulky is lined up and the bearings adjusted for the weight it is to carry. Picking up a sulky and spinning the wheel is in no way a test as to whether the cups, cones and balls are in proper shape and adjustment, as the points of friction are entirely different in a wheel spun in the air and one oo the ground with a man's weight upon the seat. The balls should he occasionally inspected—chipped or cracked halls being replaced with perfect ones. Cups seldom give trouble, as they revolve with the balls and get an even wear, but not so with the cones, they being statiooary, the wear heing on the bottom and the points of contact so small, they are houod to wear and cut, especially if the balls are chipped, specked or cracked. A cut or worn cone will retard speed, especially when the race is drawn out and the horse is tired and exhausted, as then every ounce of weight and every hit of extra friction counts. The shape of the cone and cup should be made with the proper curves in regard to where the balls travel, aod so as to cause the least friction and coosequently attain the best speed results. This is a feature which a great many sulky huilders overlook. Another very important feature, which should be on every sulky is an adjustment to throw the wheels in line when the weight is up and the shafts strapped to the horse. If the distance hetween the froot of the wheels is greater than at the hack or vica versa there will be a grouod friction which will not only decrease speed but wear out tires which, as all know, are expensive. I see that some of the most prominent sulky huilders are putting this adjusting attachment on their 1905 models which is a great improvement in sulky construction. It can he put on any sulky at small cost and will save the owner a big bill of expense, and necessarily make a faster sulky. These few points invariahly apply to road and speed carts as well as to sulkies."

Drove the Fastest Heat Ever Trotted in Kentucky-- Tiverton 2:04 1-2.

All the horseboys know the noted trainer, W. J. Andrews, East Aurora, N. Y., who has driven a host of noted horses to their records, including John R. Gentry 2:00½, Mascot 2:04, Belle Hamlin and Justina to pole 2:13. which were world records; also Swift 2:07, Tiverton 2:04½, Grace Bond (3) 2:09¼, Phala (3) 2:13¼, Promise 2:10, and about one hundred others better than 2:30. Mr. Andrews is a trainer who can condition, drive and race a horse, and return him sound in the fall ready and fit, as the saying goes. He uses quite extensively a wash made as follows: 1 dozen bottles Absorbine to 1 barrel Witch Hazel. stirs it well together and draws his wash from the barrel for steaming out between heats, and as a brace to do up the legs in, etc., besides using Absorbine full strength, as the case may require. In a recent letter he writes W. F. Young:

Dear Sir: I have used your Absorbine for several years, and have found it the best of anything I ever used for strained tendons and muscle soreness. Yours truly, W. J. ANDREWS.

Mr. M. R. Duffey has in his string at Santa Rosa a promising candidate for the pacing division of the Futurity Stake No. 2 to be placed in 1905. Also a promising yearling that he is just begioning to work hy Jack W. 2:12¼ that takes kindly to the trot. Mr. Duffey has room for a few good green horse. He is a good caretaker and exercises good judgment in his training preparations, as he is a thorough master with the reins. Mr. Duffey has driven some pretty fast ones through the campaigns in the East. And now he has settled in the City of Roses. There is as good a mile track as there is in the State, also as good a winter track as one often sees. *

TOM SMITH 2:13¼ BY McKINNEY—OWNED BY E. P. HEALD, SAN FRAN

ZOMBRO THE GREAT.

The brightest chapter in the history of three-year-old racing in California is the one which recounts the races of 1904 and the bright particular star and hero of the story is Zombro, son of McKinney, whose noble head is here with perfectly portrayed by aid of the photographer's and engraver's arts. Zombro did what no other three-year-old has ever accomplished—he won forty heats in standard time and closed the year with a record of 2:13, the champion three-year-old of the year. There were other high class three-year-olds out that year, including Stam B, Jasper Ayers, Dr. Puff, Stamboulette and Lottie but Zombro was given the palm as the best of them all, and when he went out of his class and trotted against aged horses he clearly demonstrated his wonderful race horse qualities. At the State Fair Zombro was started in the 2:14 class trot in which the invincible aged horse Iago was a starter, and when the colt drove the Tempest gelding out in 2:11 and was beaten but a neck, the immense crowd in the grandstand rose and cheered the colt to the echo. Such an exhibition of gameness and bull-dog determination in a colt had never before been witnessed in California. As a four, five and six-year old, Zombro raced on, was a frequent winner, lowered his record to 2:11 and trotted a workout mile in public in 2:08. Having proved his worth on the track he was retired to the stud and when his first foals made their appearance, their uniform size, color and beauty of form were evidences of his power as a sire to stamp his get with his own likeness, and as they began to be trained and raced it was seen that they had been endowed with his speed and gameness. He already has seven trotters in the standard list, headed by the beautiful mare Zephyr with a four-year-old record of 2:11, and his daughter Bellemont 2:20½, winner of the two-year-old trotting division of the $6000 Breeders Futurity is the fastest trotter of her sex and age that has raced in the United States this year. At Los Angeles last week Mr. I. C. Mosher worked his two-year-old filly Gluck by Zombro a quarter in 32 seconds pacing after out five weeks training at that gait. She trotted miles in 2:24 during the summer, and was then turned out, Mr. Mosher permitting her to pace when he took her up five weeks ago. Zombretta, a four-year-old, raised by M. A. Murphy trotting a half mile on the 10th of this month in 1:06¼ with the last quarter in 32½, after but six weeks' training. Helen Dare, a six-year-old daughter of Zombro had been in training just sixty days when Fred Ward drove her a mile at the trot in 2:17¼ and a little later on she worked a mile in 2:16¼. She will step close to 2:10 this year. Mr. Beckers drove Zombowyette 2:18 a mile this year in 2:14½ and Tee Dee Cee 2:19½ a mile in 2:13½. Italia 2:23½ winner of the Occident Stake of 1901, worked a mile this year at Cleveland in 2:08½. It will be remembered that Zephyr 2:11 won a heat in 2:06½ at Hartford last season, timed by a hundred outside watches, but the timers were not in the stand and she escaped the mark, but broke down in the race. This year they worked her some and were afraid she would not stand to race, consequently she was not raced, but her legs are so good that she will be staked all through the grand Circuit next season. Mr. Geers says she is the fastest trotting mare he ever drove.

HEAD OF ZOMBRO 2:11

That Zombro is McKinney's leading son is proven by the fact that he has twice as many in the list as all the rest. This year his breeder and owner Geo. T. Beckers, of Los Angeles, took Zombro to Ohio where he made a good season and had many very high class mares. Zombro was much admired by the eastern breeders, and Mr. Beckers had three handsome offers for him which he felt compelled to refuse as he believes he has the greatest sire living and that time will prove it. Like everybody else who has lived on this coast, however, Mr. Beckers could not be satisfied to remain East, especially as his home and property interests are all in California, so he brought Zombro back this fall and will place him in the stud at Los Angeles until June 1st at $50 the season. At the request of the Oregonians he will then take Zombro to Oregon. The young Zombros up there are such a grand lot that it seems as if nearly every breeder there wants more of them, and they have been deluging Mr. Beckers with letters requesting him to bring the horse there for the season of 1905.

Mr. Beckers has recently purchased a large lot, containing fourteen nice box stalls, which adjoins his home place and here he will have the very best accommodations for mares and colts. Mr. Beckers' place is at 4645 Agricultural Avenue, Los Angeles, where those desiring any further particulars in regard to Zombro or his get can address his owner. We advise every owner of a good mare that wants to breed to the best and where the results are certain to be profitable with reasonable good fortune to patronize Zombro. $50 is such a low price for the services of such a great race trotter and sire that all who get colts by him will get more than value received for their money and a profit on the investment. The family of Zombro will be one of the greatest ones in trotting history a few years from now, and the time to get them is while you can.

ONE OF THE VERY BEST.

A few words from a man whose reputation for truth and honesty is established and who knows thoroughly the subject he is talking or writing about is worth volumes of "hot air." The other day Mr. John Phippen, who answers to the description of the man given above, who was seventeen years at Palo Alto, four years on Lomo Alto Farm, at Dallas, Texas, and who has given sixty-one horses records from 2:12 to 2:30, made the following remarks about the colt whose picture appears on this page:

"One of the best bred colts in California today; and I have my doubts if there is one better bred in the United States than is Mac Direct, two years old by McKinney 2:11¼, first dam twenty-third by Director 2:17; second dam Nettie Nutwood by Nutwood, owned by Captain C. H. Williams of Palo Alto. This colt is a beautiful seal brown, stands 16 hands, weighs 1075 lbs., with flowing mane and tail, the only mark being the near coronet white behind, and legs and feet sound Mac Direct being large for his age, we have not considered it wise to try and make a fast trotter out of him while young. Consequently he has only been nicely broken and driven times enough on the track to go a quarter in 44 seconds and an eighth in 21 seconds or a 2:48 gait for a mile, well within himself; this the fourth time he was ever asked to step for speed. I consider him a good prospect and if judiciously handled from now on until he is five or six years old, should make a great race horse, also from the breeding standpoint should make a great sire."

The above statements from Mr. Phippen are the opinion of an expert who has probably seen more high class colts taking their work than any man in California, and we advise breeders who are looking for sons of McKinney to breed their mares to, to mark them well. Capt. Williams has concluded to allow [illegible] approved mares in his three-year-old [illegible] each, with usual return privilege.

[illegible] Palo Alto Capt. Williams has established [illegible] stock farm that is situated almost in the [illegible] of the tall pine of the famous Stanford ranch. There are but fourteen acres in the home place, but it is the very richest of soil and a beautiful little farm. Six miles southeast of the University the Captain owns a 300 acre tract that is just against the hills and is one of the finest horse pastures in the world. There are a few choice broodmares on the farm, among them Nola by Nutwood, Twenty-third by Director, Net by Magic and several others. Among the youngsters he has raised are Collis H. a two-year-old by Nutwood Wilkes out of Not that is not only one of the handsomest colts ever foaled in California but one of the fastest. Then there is Alta Nola by Altamont out of Nola, and Greggains by Stolnway out of Maggie McGregor by Robert McGregor.

MAC DIRECT
Two-Year-Old Colt by McKinney, dam by Director

Capt. Williams believes in developing his colts, but is of the very sensible opinion that while a little racing is good for them, much racing should not be indulged in until they have age and their bones and muscles are set. It is a good rule to follow and one that will save much veterinary fees and lotions. Good pasturage can be had on the farm the year round, and while the rates charged for horses by the month or year is not large, Mr. Williams will not allow his fields to be overstocked but will see that plenty of good feed is there for those entrusted to his care. The motto of the owner is to always look for the best, and in his limited breeding ventures he has always picked out good mares and bred them to the best stallions. It is a plan that will pay and the young stock at this farm show it.

A High Class Son of McKinney.

On the California circuit this year was the highest class bunch of three-year-olds that have appeared in this State since the year Zombro, Stam B., Jasper Ayers and Dr. Puff made the three-year-old events sensational. One of the unfortunate phases of this season's racing, however, was the condition of several of the hest in this division, as a number of them were sick and compelled to race when not in shape to show the speed they were otherwise capable of. In the Occident and Stanford Stakes especially did these conditions exist, and any colt that kept in the money in all his starts proved that he was a race horse. The handsome colt whose picture adorns this page was such a one. His name is Carlokin, he is owned by Mr. C. L. Jones of Modesto, and was trained and driven in all his races by H. S. Hogoboom.

Carlokin was bred at Santa Rosa Stock Farm. His sire is McKinney, recognized by every breeder in America as one of the greatest if not the greatest of living sires. Carlokin's dam is the great hroodmare Carlotta Wilkes, dam of three in the list, by Charley Wilkes 2:21¾; second dam Aspasia, dam of three in the list, by Alcantara 2:23; third dam Miss Buchanan, dam of Escape 2:26½ and grandam of four in the list, hy Clark Chief 89. His fourth dam is by Sebastopol and his fifth dam by Monarch There are no hetter blood lines than those contained in Carlokin's pedigree. He is related to all the royal families of the Wilkes tribe, the greatest of all race winning families. He is a bay colt with two white stockings behind.

Carlokin made his first start at San Jose, August 6th, last day of the Breeders Meeting, in the $6000 Futurity for three-year-olds. The race went to Murray M. in straight heats, and Carlokin was 3-2-3 in the summary, although he was so sick one week previous to the race that his owner and trainer had almost decided not to start him. His next appearance was in the Occident Stake, at Sacramento. This race took seven heats to decide, and was finally won by Almaden. Carlokin won the second and third heats and finally divided second and third money with Marvin Wilkes. If ever a colt showed gameness in a race it was Carlokin and his performance was voted a wonderful exhibition. One week later he started in the Stanford which was a five heat race and third money went to his credit. He won the second heat of this race in 2:20¾ which is his record.

CARLOKIN (3) 2:20¾ BY McKINNEY

Few colts have greater promise than Carlokin. He is almost perfectly gaited and a resolute do-or-die trotter. His endurance and gameness are phenomenal and his record is no measure of his speed. He will he a 2:10 trotter as sure as he lives and meets with no accident and when he is ahle to trot one heat in 2:10 he will he ahle to do it three times and will never he beaten except hy a faster horse. He stepped to the half in 1:07 in his San Jose race and had he not been a sick colt the time of the heat would have been very close to 2:15.

Mr, Jones, his owner, is a dairy farmer who has many things besides horses to occupy his time. When asked if he would sell Carlokin he stated that he was not anxious to dispose of him, but he had a price as he has on all his stock of any description. If the colt is not sold he will make the season at the farm near Modesto, being limited to a few mares.

Nearest and His Get.

There have heen many instances in horse annals where full hrothers have acquired distinction, one for great speed, the other as a sire. Dexter was a world beater in his day and his hrother Dictator founded a family that is one of the greatest in the stud books, and there are many instances of the same kind hoth among the harness horses and the thoroughhreds. John A. McKerron 2:04½ son of Nutwood Wilkes and Ingar hy Director, is the fastest trotter of all the trihe of Wilkes and his own hrother Nearest 2:22½ s siring speed of such a high order that horsemen are already predicting for him a place among the very greatest of the great producing stallions.

NEAREST 2:22½
Own Brother to John A. McKerron 2:04½

The first of his get to race is Alone whose four-year-old record of 2:09¼ was the fastest by a pacing mare of her age the year it was made and which made Nearest the first eight-year-old sire to have a performer with a record helow 2:10. Alone's half-mile record of 59½ seconds is the fastest half ever paced hy a mare in California. She stepped a quarter in 27 4-5 seconds to a 65 lb. wagon with the last eighth in 13 seconds. This clip will hang up the very hest of them.

The two-year-old colt Highfly that took a record of 2:24¼ at San Jose this year and worked a trial of 2:17¾ after only four months' work with the last eighth of the mile in 17 seconds, is another of the get of Nearest. The day he was put in the list he could surely have beaten 2:15 as he worked a half in 1:06½. Just It, another of his two-year-olds, worked a mile in 2:21½, and Mr. Barstow has several trotters just as good as these if not better. Everyone that has the harness put on shows that it is the right kind. True Heart, a three-year-old, trotted a mile in 2:20¾ wheu a four-year-old and while heing used as a road mare. Mr. Barstow has a McKinney colt out of a mare hy Nearest that stepped a three-minute clip the tenth time he was ever in harness and is a natural trotter. It certainly looks like the hlood of Nearest is just the right cross for the McKinney mares, as it is the identical hlood of the second greatest trotting stallion in the world.

The hreeding of Nearest is so well known that it is hardly worth while to give it here, hut it may not he out of place to say that he is hy Nutwood Wilkes 2:16½ one of California's greatest sires, his dam is the great hroodmare Ingar by Director 2:17, whose family of race winning trotters and pacers has annexed purse after purse and stake after stake in competition with the hest on the Grand Circuit year after year. His second dam is by Echo that sired the dams of Direct 2:05½, Rex Alto 2:07¾ and others, and the third dam tbat great hroodmare, the dam of Gihraltar and others, and was hy Owen Dale, son of Williamson's Belmont.

Nearest is a hay horse, 15¾ hands bigh, weight 1200 pounds. Individually he is vigorous, compact, short hack and hardy, with fine disposition. His blood lines are of the extreme speed order, the kind that get the money on the race course and the prizes in the show ring. He will make the season of 1904 at the stables of his owner, T. W. Barstow, Alameda and Race streets, San Jose.

HIGHFLY (2) 2:24¼ BY NEAREST

Stake Entries and Payments.

Occident Stake of 1907, for foals of 1904. Entries close January 1st with the Secretary of the State Agricultural Society at Sacramento. $100 entrance, of which $10 must accompany entry.

Payments are also due January 1st on entries in the Occident Stakes of 1905 and 1906 to be trotted at the State Fairs of those years. The payments are $15 for the 1906 stake and $25 for the 1905 stake. Payments must he made to the Secretary of the State Agricultural Society at Sacramento.

Last payment on three-year-olds entered in Pacific Breeders Futurity No. 2, to he trotted or paced in 1905. Payment $10, and must he made on or hefore January 2 1905, to F. W. Kelley, Secretary, 36 Geary Street, San Francisco.

Mr. Jos. Purrington, of Santa Rosa, has sold a pair of four-year-old mares by Silas Skinner to Mr. W. F. Fuller of this city for $1500. These mares were raised hy Mr. Purrington and are considered one of the best as well as one of the handsomest road teams in Sonoma county, where so many good horses are [illegible]. The sale was made through Thomas Bonner of [illegible] Rose Sales Stables, on Market street, this

Directs Have the Winning Habit.

There is no better dispositioned stallion on earth than I Direct 2:12¼. His sire Direct 2:05½ has no better bred son, as I Direct's dam is the famous broodmare Francisca, dam of four in the list by different sires and dam of a producing son by another sire. I Direct is without doubt one of the fastest sons of Direct as he was a close second to Walter K. when that famous ringer got his record of 2:08 and was himself officially timed in the heat in 2:08¼. There is no son of Direct that is a handsomer individual. With all these qualifications I Direct can be expected to sire speed and race winners. He will do it just as sure as he has well bred mares mated with him. The Directs have the winning habit—they were born with it and transmit it to their offspring It is a family trait. A little over a year ago Mr. Mahry McMahan, a prominent real estate owner and dealer of this city purchased I Direct and concluded to give him an opportunity in the stud—the first he had ever had Prior to Mr. McMahon becoming his owner I Direct had been bred to probably two or three mares but no more. Last spring Mr. H. B. Freeman, the Sacramento trainer, had him in charge and I Direct was bred to quite a number of standard bred mares every one of which is now in foal. He is a sure foal getter. One of his yearlings and a two-year-old pictured on this page that are pretty good evidence of his worth as a sire. One filly out of Mr. A. Wempe's A. W. Richmond mare is considered one of the greatest prospects in California. The other is a colt out of Chas. Kapp's fast mare Marguerite 2:17 and is a strong lusty fellow with lots of natural speed. Both have run out all their lives and hardly know what shelter looks like, but they will soon be sent to Pleasanton to be trained, and if reports of their lot speed are true, they will not need much teaching. Both have the very best of feet and limbs and are the sort that any breeder would be proud to point to as the get of his horse. Any horse with I Direct's individuality and breeding will sire speed, good looks and perfect disposition. These qualities make race horses and bring the high prices in the sales ring. Think of Direct's breeding for a moment. By Direct one of the world's champion race horses and sires Dam Francisca, one of the greatest of broodmares by Almont 33; second dam Frances Breckenridge by Sentinel, third dam by Bayard, fourth dam by Swigert's Lexington and fifth dam the famous thoroughbred mare Eagless, the founder of a great family, by imp. Glencoe.

There is nothing richer in the pages of the stud book than this. In selecting a stallion to breed to, remember, as has been said before, "the Directs have the winning habit." Combine this with looks, gameness, good feet and legs, perfect disposition and solid color, and there is nothing left to ask for. Write to H. B. Freeman, 19th and E streets, Sacramento, or to the owner, Mr. Mahry McMahan, 207 Sansome street, San Francisco, for further particulars.

I DIRECT 2:12¼
By Direct 2:05½, dam Francisca by Almont

YEARLING COLT BY I DIRECT

TWO-YEAR-OLD FILLY BY I DIRECT

Captain Reed's Promising McKinney Colt.

The picture occupying the adjoining space hardly does justice to the good colt Joe Reed of which it is a likeness. Joe Reed is a foal of 1902, and is entered in and eligible to start in the $6000 Breeders Futurity to be trotted in 1905, and is already being tipped as a probable winner, as he has great natural speed and is one of the improving kind. He is a black colt, 15.1 hands high and weighs 820 pounds. He has recently been broken by Mr. T. C. Cabney, the well known trainer who had the champion trotter of the California Circuit this year, Morosco 2:12. Mr. Cabney drove him a quarter in 50 secunds thirty days after the colt was broken and is very much pleased with him. He thinks he will get the first money of that $6000 stake with him unless some accident prevents. Joe Reed is a well bred colt as his dam is Katinka 2:20 (matince record 2:17) by Abbotsford. There was never a faster mare than Katinka driven on the road in San Francisco and in brushes on the speedway she has taken the measure of many a trotter and pacer with records way below her own

Joe Reed is owned by the well known and popular road driver of San Francisco, Capt. A. L. Reed, who refused $500 for him when the colt was six months old and had repeated offers of $750 for him during his yearling year.

On account of the well known reputation of Katinka for speed and gameness, and the undisputed championship abilities of McKinney as a sire, we see no reason why Joe Reed should not be a sensation of the year 1905, and fulfill all the hopes his genial and enthusiastic owner entertains for him.

Oakwoods Stock Farm.

The largest importing and breeding establishment in California devoted to highest class draft and coach horses is the Oakwoods, of which Mr. Francis I. Hodgkins is proprietor. Visitors to the California State Fair last year were astonished at the show made by this farm, no less than 20 [illegible] stallions being exhibited. Every first prize in the Percheron and Belgian classes went to Oakwoods Farm. The stallion now at the head of the farm is Joubert, a portrait of which by Geo Ford Morris, adorns the front page of this paper. This stallion is without any doubt the most magnificent specimen of the Percheron breed ever brought to California. Visitors are always welcome at Oakwoods.

JOE REED, BLACK COLT BY MCKINNEY

WOODLAND STOCK FARM.

When, a few weeks ago, the sale was recorded of the property known as the Woodland Fair Grounds to Mr. Alex Brown of Walnut Grove, Sacramento county, every California horseman knew that Mr. Browo had made a wise move. While the fame of Walnut Grove Farm bad been heralded abroad, the fact than it was subject to overflow in extremely wet winters made it objectional for a stock farm where young trotters must be developed every year. When the high water of the winter of 1903-4 compelled Mr. Brown to move his horses, he cast about for a favorable spot to locate them, and his purchase this fall of the Yolo county property has given him a place that is almost ideal for a breeding and training farm. It is situated but one mile from Woodland, the county seat of the richest county in California according to population, and comprises about sixty acres of as fertile land as lies out of doors. It is on a line of railway that makes it convenient to all sections of the State. San Franciscans can leave home at 8:30 a. m., arrive at the track before the noon hour, have plenty of time to see their horses worked and take the 4 o'clock train, reaching the city in time for dinner. Hay is one of the principal products of Yolo county. and can be purchased at the Woodland track for less money than at any other first class track on this coast. The climate is almost ideal. Yolo never suffers from drought, and in the wettest winters the graded and gravelled roads which lead up to the track gate are perfect for jogging horses on, while the track is ready for speeding within twenty-four hours after the heaviest storm. Mr. Brown, to avoid all confusion, has named his new purchase the Woodland Stook Farm and by that name will it be known in the future.

One of the greatest trotters on the Eastern Grand Circuit this year was Aristo 2:08¼ a competitor in the fastest dead heat ever trotted, and although suffering from lameoess was able to make Sweet Marie, the greatest race trotter ever foaled, expend every ounce of her energy to beat him. Aristo won the Occident and the Stanford Stakes as a three-year-old and in his total of nine starts has won nearly $10,000. He was bred by Mr. Brown, at Walnut Grove, and sold last spring to James Butler of New York for $10,000, Aristo is by Mr. Brown's premier sire Nushagak, and his races show that Nushagak can sire trotters that can win in the very best of high class company. He is the first of Nusbagak's get to be raced and his grand proportions, faultless gait and race horse qualities will commend his sire to every sensible breeder.

The stallions that will be at Woodland Stock Farm are Nushagak, Prince Ansel and Steinmont.

Nushagak 25939, is a black horse 15.2½ hands, foaled 1890, and was bred by the late William Corbitt. He is by Sable Wilkes 2:18 as a three-year-old, and one of the best sons of Guy Wilkes, and his dam is Fidelia. dam of Fidette 2:28½ that is the dam of Mary Celeste, two year-old record 2:17¼. Fidelia is a daughter of the great Director 2:17, sire of Directum 2:05¼, Direct 2:05½, etc. The second dam of Nushagak is by Reavis' Blackbird 2:22, sire of Mamie Griffin 2:12, Vic H. 2:12¼ and others. In Nushagak's pedigree is the blood of the four great broodmares, Lady Bunker, Sable, Dolly and Gretchen, so it is no wonder he is a producer of speed as well as size and good looks. The families of his dam, grandam and great grandam are noted for stamina and vigorous constitution, and with the Wilkes and Moor crosses on top he cannot fail to be one of the great sires of California.

He has only twenty-two or twenty-three foals older than two years old, and but one of these older than five years old was ever trained. That one Majella B. took a two-year-old record of 2:29 and showed a trial in 2:13¾ as a four-year-old. There is one at San Leandro that started in a road race at Pleasanton this fall. She is called Polly D. and her owner said she had never been trained a day in her life, yet she showed a mile in that race in 2:29 hitched to a cart. Of his five-year-olds there are only five Aristo has a record of 2:08¼ and up to the time he went wrong showed that it was all the best trotter that the Grand Circuit ever saw could do to beat him. Black Jack 2:28½ could trot in 2:20 as a four-year-old. The Boquet showed a mile in 2:17¼, last quarter 31½ seconds, as a four-year-old. Dr. Martin showed a mile in 2:30, last quarter in 35½ seconds; the fifth one, untrained, showed a forty gait. Mr. Brown only owned a few mares until lately and for two seasons bred them to outside stallions, consequently Nushagak has not any three or four-year-olds from good dams. He has two three-year-olds from livery mares. He has seven two-year-olds on the farm, five of them have had the following amount of handling: El Rey, bay colt, dam Piocha, was worked four and one-half months, trotted a mile over Pleasanton track on July 14th, in 2:26, last half in 1:11, last eighth in 17 secoods, was separately timed in the second heat at San Jose in 2:25 last half in 1:09. Beauty, black filly, worked three months, trotted a mile in 2:37, last half in 1:16, last eighth in 18 seconds. Peter Shields, worked three months, showed a mile in 2:45, last half in 1:20, last eighth in 18¾ seconds. Jessie Shirley, dam Hattie W. by Alaska, worked eight weeks, showed 2:30 gait hitched to cart. Bonnie Lassie, just commenced working, can step a 2:50 gait to cart. There were two two-year-olds bred outside the farm that were worked some. One owned by Dr. Martin showed a quarter in 40 seconds and one owned by F. J. Fallman showed a 2:30 gait. Of his yearlings two have been broken. One was driven six weeks and showed eighths in 23 seconds to cart; the other one has been driven two months and can show a 2:30 gait.

Prince Ansel 2:20½ at two years by Dexter Prince, dam Woodflower, dam of Prince Ansel (2 years) 2:20½, Seylex 2:15¾, chestnut colt by Piedmont (trial 2:16), Zanita by Electricity (trial 2:20½), Arthur B by Steinway (trial 2:17¼) and The Bouquet by Nushagak (trial 2:17¼); second dam Mayflower, dam of Wildflower (2 years) 2:21, Manzanita (4 years) 2:16 to high wheel, and eight producing daughters. Prince Ansel has a right by speed and breeding as well as individuality to be a great sire. His dam was a remarkably great broodmare as she had six colts by six different horses that could beat 2:20, five of them trotters. He should be a great sire of early and extreme speed as his dam and grandam were both great producers of early speed, and he was a remarkably fast colt himself. He is bred very much the same as Lisonjero 2:08¼, as he traces to Mayflower. Eleata is bred some what the same as she combines the Dexter Prince and Electioneer families, which should and is, (as Prince Ansel, Lisonjero and Eleata, go to prove) a great combination of extreme speed-producing blood. Prince Ansel is backed up by two great early and extreme speed producing dams. His oldest colts are three years old. There are only three of them, and practically two, as one had a broken leg. The ooly one trained, Prince Gay, showed a mile in 2:18¾, last half in 1:07½, last eighth in 16 seconds on June 11th over the Pleasanton track. He has three two-year-olds; only one was trained and Mr. Spencer considers her the greatest trotter he has ever driven. With seven weeks work, only worked a little twice a week, she trotted a quarter in 37½ seconds, last eighth in 17½ seconds. The other two have not been trained. Prince Ansel has no yearlings on the farm as he made the season of 1902 at Mayfield and his colts in that locality are said to be a remarkably fine lot.

Steinmont, chestnut stallion, five years old, sired by Arthur B. 33295, dam Francisca, dam of I Direct 2:12¼, Sable Francis 2:15¼, Guycisca 2:26 and Erosmont 2:22 by Almont 33. Here is one of the strongest bred horses in California as well as ooe of the best lookers. He is a round, smooth, evenly turned horse, of extraordinary style and appearance, is sixteen hands high and will weigh about 1150. He combines the blood of Strathmore, Electioneer aod Almont, the Strathmore strain coming through Steinway and Arthur B., and the Electioneer strain through Woodflower, a great producing grandaughter. The Almont comes through Francisca, one of his greatest daughters, she being a dam of four performers by four different stallions, and a producing son by a fifth stallion. Steinmont can make her fifth performer at any time and he is confidently expected to make her greatest one. He is an extra good gaited trotter and has shown a 2:15 gait; was worked six weeks as a four-year-old and showed a mile in 2:35, last quarter in 35 seconds. This season it had been the intention to fully develop his speed and give him a slow record and race him next season. He was taken up out of paddock on January 15th, jogged until ready to work and after a little slow work, developed a slight lameness that took all summer to locate. It was finally found to be a blind splint, which was treated about September 1st, and seems to be all O K. now as he is working sound and fine, and barring accidents, he will get a record of 2:15 or better next season. He has four colts, one yearling out of Nosegay, dam of Aristo 2:08¼, a large, good looking filly, and three weanlings, large and extra fine lookers. His sire Arthur B. was a very fast horse and a grand individual. Mr. Spencer worked him a mile as a four-year-old over the Sacramento track in 2:17¼, last half in 1:06¼, last quarter in 31¼ seconds. He could have gone a mile at that time in 2:12 or better. He is by Steinway dam Woodflower by Ansel.

There are about twenty-five broodmares and a number of three-year-olds, two-year-olds and weanlings on the farm at the present time.

Chas. A. Spencer, a practical and thorough horseman and trainer, who has been with Mr. Brown for several years, is Superintendent of the Woodland Stock Farm, and all the colts are trained by him.

The people of Yolo county are indeed fortuoate that such an enterprise has been established in their midst. The breeding of high class trotting and road horses will add much to the value of Yolo couoty stock and the farmers who own good mares cannot do better than to patronize the Woodlaod Stock Farm stallions. The service fees have been placed within reacb of all. Nushagak at $50, Prince Ansel at $30 and Steinmont at $25, for the season with the usual return privileges. The very choicest alfalfa pasturage can be had close to the track for from two to three dollars per month.

Thunder Cloud a Good Selection.

The Rev. Mr. Beecher once remarked of a young lady of his acquaintance who was about to become the wife of a young clergyman of some ability, "Well, if Hetty *must get married* she might have made a worse choice." If the government of the United States *must breed carriage horses* it might do much worse than to secure the stallion Thunder Cloud formerly owned by Thomas W. Lawson, proprietor of the famous Dreamwold Farm, for a model sire. Report says that a representative of the government is negotiating for the purchase of Thunder Cloud for that purpose.

If we are correctly informed, this stallion was bred by Hon. Norman J. Coleman, Ex-Governor of Missouri and Ex-Commissioner of Agriculture of the United States. The horse is registered as Carmon 32,917. He is a bay in color, stands 15.3½ hands high, is of beautiful conformation, very stylish, has plenty of substance and much quality. He fills all the requirements as an individual and has been a blue ribbon winner in the show ring. He is not only a good individual but is also bred well enough to transmit his good qualities with reasonable certainty provided the right kind of mares are selected to mate with him, as will doubtless be the case.

Thunder Cloud (Carmon) was by Carnagie 8405. His dam was Monitor Maid by Monitor 1327; second dam Clara C. by Seth Warner 281; third dam Grace by Abdallah Jr; fourth dam Glencoe Belle by Ole Bull, a son of old pacing Pilot, and fifth dam Glencona, a thoroughbred daughter of imported Glencoe. His pedigree is grounded upon an excellent thoroughbred foundation. Carnagie, the sire of Thunder Cloud (formerly Carmon 32,917) was by Robert McGregor 2:17½, whose sire was Major Edsall 2:29 by Alexander's Abdallah and whose dam, the great broodmare Nancy Whitman, was by Seeley's American Star. The dam of Carnagie was Annie Nutwood by Nutwood 2:18¾ and his second dam was Annie Watson 2:33 by Vermont Boy. The latter, according to some authorities, was by French Charley, but Mr. Joseph Battell, in his work entitled the Morgan Horse and Register, states that Vermont Boy and French Charley were two names for one and the same horse, whose sire was said to be the inbred Morgan Billy Root, also known as Comet.

Monitor, sire of the dam of Thunder Cloud (Carmon) was by Merchant, whose sire was Alexander's Belmont 64, and whose dam was by Mambrino Chief 11, his second dam being by the noted four mile race horse Grey Eagle by Woodpecker, son of Bertrand, by Sir Archy. The dam of Monitor was Trojam by Trojan 312. The latter was by Jackson's Flying Cloud, son of Vermont Black Hawk, and his dam was by old Abdallah.

Seth Warner 281, sire of the second dam of Thunder Cloud (Carmon) was by Ethan Allen 2:25½, the best son of Vermont Black Hawk. Seth Warner's dam was the famous old trotting mare and great weight puller, Sontag 2:31, by Harris Hambletonian; second dam by a circus horse that was claimed to be an Arabian; the third dam by Long's Eclipse, a running bred son of American Eclipse. Abdallah Jr., sire of the third dam of Thunder Cloud (Carmon), was by Alexander's Abdallah. His dam was the thoroughbred Kitty Fisher by Chorister; second dam by Bertrand, son of Sir Archy—and third dam by Darnaby's Diomed, a running bred son of Hamiltonian, by imported Diomed.

The pedigree of Thunder Cloud (Carmon) shows four crosses of Alexander's Abdallah, two of which come through Belmont and one of these through Nutwood 2:18¾. The pedigree shows two crosses of Vermont Black Hawk and other probable Morgan crosses through Billy Root. It also shows two crosses of famous old pacing Pilot, one of Mambrino Chief, and enough of the thoroughbred all along the line to insure stamina and quality. With such a horse as that and mares of quality equally, as well bred the government of the United States should succeed in producing a class of carriage horses that will be a just cause of pride to all its citizens and a credit to the promoters of the enterprise. It is a line of breeding that this paper has advocated for years.—*American Horse Breeder.*

A High Class Pacer.

If there is a two minute prospect in California at the present time it is Edwin S. the chestnut pacing gelding whose mile in 2:08 in the third heat of a winning race was the fastest mile paced on the Pacific Coast during the year. Edwin S. is owned hy Mr. E. A. Servis of Durham, Butte county and as can he seen from the reproduction herewith of a photograph taken two months ago, is possessed of more than tbe average share of good looks, heing a well turned and powerfully muscled animal as well as one of great symmetry of proportions. Edwin S. is one of the sort that races with "nothing but a harness." He requires neither hopples, hoots nor weights to keep him at his gait, which is smooth and frictionless. Either jogging or at speed he is a very attractive horse, attending to husiness all the time, and having manners that are as near perfection as equine manners can get. He made his first appearance during the season of 1903 and started in three races. He won his first start, which was at Petaluma, August 29th, his three heats heing in 2:17¼, 2:14¼ and 2:14½. At Sacramento three days later he started in the green class pace, and after finishing second to Demonio in 2:11½ the first heat, was drawn. The following week he started in the 2:20 class. Ben F. won the race, hut Edwin S. was second two heats in 2:11 and 2:13 and won third money. All the fastest pacers on the circuit were in this race, and his position in the summary was ahead of Jonesa Basler 2:11¼, Miss Georgie 2:11½ and Nance O'Neil, the mare that has since taken a record of 2:09¼.

Edwin S. 2:08 by Dr. Hicks 23103

This year Edwin S. started in five races and was beaten but twice, once hy Kelly Briggs a tried campaigner that has heen timed separately better than 2:07, and another time heing distanced hy an accident. It was in his first start of the year at Pleasanton where this occurred. He had won two heats of the 2:13 pace, when in the third his harness broke and his driver had to pull him up. His race at San Jose on the last day of the Breeders Meeting is still the talk of all the horsemen who saw it. The first and second heats were hoth in 2:11¼ and when the word was given for the third heat, Cuckoo rushed out in front and was at the half in 1:04. Then Oma A. went after the leader and Edwin S. was at least three lengths hehind them as they swung round the far turn. He had to go the overland route to heat them, hut he did it handily and heat Oma A. a neck in 2:08 flat in the most sensational finish and the fastest heat of the year on this Coast. Edwin S. is hy Dr. Hicks 23103 son of Durfee 11258, son of Kaiser 2200 son of Geo. Wilkes. The dam of Dr. Hicks was Gazelle hy Buccaneer, and Gazelle is a full sister to Grace, the dam of Daedalion 2:10, Creole 2:15 and others. The dam of Durfee 11256 was Julie hy Revenue 1976, that was a son of the famous champion Smuggler 2:15¼. The dam of Kaiser was hy the great Dictator 113.

The dam of Edwin S. died a few months ago. She was hy La Harpe 2:17¼, he hy Egmont 1828, son of Belmont 64, sire of the great Nutwood and 75 more producing sires. The dam of La Harpe was the pacing mare Haidee by Maxey Cobh 1329, one of the old time trotting champions with a record of 2:13¼. The pedigree of Edwin S. is hristling with speed through all its removes and there is not a cross hut has produced high class race winning horses. Edwin S. is not only fast hut he is game and is a race horse of Grand Circuit calibre. He is now at Pleasanton in charge of his owner. Mr. Servis also owns the roan pacer Doctor J. hy Doctor Hicks that is probahly as fast a horse as Edwin S. but was unfortunate in his races this year as he was mixed up in a had collision in his first start, and he was raced thereafter more to give him confidence than anything else, and at the close of the season he paced and acted like a veteran. The dam of Doctor J. is by Singleton 20886, he hy Willie Schepper a son of Hamhletonian 10. The dam of Singleton was Lightfoot hy Flaxtail 8132, second dam Fanny Fern hy Irwin's Tuckahoe. Doctor J. can pace a mile in 2:10 and can go any number of heats. He has no record and is one of the hest prospects in California for the green classes next year.

THE NATIONAL HORSE SHOW.

By [illegible] F. Pond

[illegible] N[illegible] York [illegible]st. [illegible] of the se[illegible] greater [illegible] number [illegible]re of high[illegible] from [illegible]nd, with [illegible]s, s[illegible] jo[illegible]ber of Eng[illegible]. As these [illegible] Amer. an product, [illegible] the [illegible] f this year, [illegible] the [illegible]ge, in 19[illegible], of [illegible] steppers, which [illegible] upholding of [illegible] for a [illegible]nal success has [illegible]sses to narrower limits, [illegible]s to an individual class, [illegible] eliminate half a dozen by [illegible]ght over-compensated [illegible]tion, which ren[illegible] almost invincible. [illegible] has been the rigorous [illegible] he amateur, which has [illegible] any possibility of a [illegible] selling [illegible] high-priced horse for show [illegible] another horse from his [illegible]m, from his sold horse, in the ring. The [illegible] of this phase has not only eradicated it, but it has made the dealer more anxious to sell the best possible [illegible], and to use the sale as a standard advertisement.

Passing to the classes, it is many a long day since we saw such large assemblies of hunters, or so good in all-round quality. When one stops to consider that [illegible] class after class of 20 to 30 entered the ring, and [illegible], in cold blood, put at a restricted gallop to face a formidable-looking five-foot fence, and that over 90 per cent. cleared it with ease and grace, it must be admitted that the standard of the hunters shown was very high. It is not often that one meets, in the 165 pounds ..nd also Tamor, by Tammany, one of the greatest horses that ever lived. These are just types taken haphazard from the list of prize winners at this show, and there were others by Eon, by Sir Dixon, by Hyder Kahn, out of mares by Hyder Ali, others tracing back to Leamington, and all that kind of blood.

Today the clever, cool-headed hunter is nearly always thoroughbred. The pace of the average hunt has increased beyond the limit of all but the most phenomenal half-breeds to stay with, and, as a rule, when the half-breed tires, he is not so dependable at his fences as is the thoroughbred. Look back to any apparent great half-breed horse and note what he has beaten. In the majority of cases it will be found that where he has met with thoroughbreds he has been beaten, as in the case of Self Protection, a half-breed lucky enough one fearfully stormy day to win the champion at Morris Park in very poor time, and then to be beaten, beaten, until withdrawn from racing. It should not be overlooked that there is a steady and very large market for really clever hunting stock, and if good performers were taken to England, and what they could do publicly demonstrated, they would be snapped up very quick. The visits of Foxhall Keene, the Waterburys, etc., have done much to introduce the high-class American hunter.

Hackneys, Saddlers and Ponies.

The English Hackneys failed to score impressively, although one or two first prizes came their way, directly as brood mares, and indirectly as regards Hildred, the Waldorf-Astora cup winner, she being bought in England for a mere song when very young. Her parentage was forgotten by most people when she won the cup. The reason for this ill success on the part of the visitors is largely a difference in type. The American idea is different, and had the classes suddenly been switched across the ocean, to an English show, the results in several cases would have been reversed by the English judges, and the American horse placed second with full justice.

The English are still breeding to the old type of Hackney, and the old stout "distance coverer" of days before the railroad, when men thought nothing of putting over 200 pounds on the back of a Hackney and asking him to go a hundred miles in less than ten hours, and repeat on the third day. They still hold that if the type is to live, it must be retained along these primal lines, or the breed will be lost, which has been the case with the St. Bernard dog and many other modern breeds. So the typical English Hackney is so good in bone that we think him a trifle coarse, and judge him accordingly. He is not asked to go a distance, but is expected to carry his very high action at great speed, as was the imported Forest King last year, the highest-stepping horse of any type this show has ever seen. We, on the contrary, breed to a more bloodlike type, showy, full of fire and flash; we do not ask them to go fifty or a hundred miles, but we do expect them to go round a park with such terrific stepping and dash that people on the sidewalk turn to look at them. We do not care if the horse resembles his sire or his grandsire, we do not care if "type be perpetuated," we do not even care who his sire or grandsire was—so long as he was a pure Hackney—and we only want "the goods" delivered, without excuse or explanation. Thus, when the two types clash, the judge, being an American, and looking with an American eye, naturally gravitates to the type he honestly and firmly believes to be right. The English judge would act along the same line of reasoning, but naturally with diametrically opposite result. Each man has an ideal horse in his mind's eye, but they differ according to environment. This is now generally understood, and so when the English Hackneys were beaten time and again at this show, there was a prevailing and unfortunate idea of "Oh, they cannot hold a candle to our stock!" A remark which simply italicized the narrow view, not to say ignorance, of the speaker.

In the saddlers it was different. Here the imported English horses were a very poor assortment, and one wonders why they were ever brought, and they were judged by an Englishman, Vivian Gooch. For a number of years we had a great deal of trouble with the saddle classes at this show. There was no distinct type, and the class was a medley year after year. In despair the management sent for Mr. Gooch, explained the situation to him, and asked him to bring order out of chaos. He did so in three years, and from turning away 70 per cent. of utterly unsuitable types, the average has now fallen to about 10 per cent. of non-eligibles. The types must be nearly or quite thoroughbred, good tempered, yet high spirited, showy, cool headed, and temperate, with three good paces of walk, trot and canter. Seldom have such large classes of superfine excellence been shown in any ring, and the fact that in every case the imported horses failed to hold their own, simply proves the higher excellence of the now well-known and recognized typical American saddler.

In ponies, the English can and do beat us badly. Doncaster Model swept the show last year fresh from English triumphs, defeating easily Jack and Jill, the phenomenons, and we thought we had about the best pony extant. This year, the same man, Robert Whitworth, brings over Berkley Bantam, a pony of the Hackney type, for which King Edward VII. offered $5000, only to have it refused. When he met Doncaster Model, it was "all over but the shouting." He steps so high in front that, in other shows, his handler has been requsted to ease up on him for fear he should overstep his capacity, while his hind feet touch the surcingle. Still, for my own part, I much prefer the old thoroughbred types of pony, the horse in miniature, and I—mistakenly perhaps—regard these Hackney types of ponies as freaks, rather than from the standpoint of utility, and I would like again to see the ponies judged by the man who judges hunters. As regards the smaller ponies, the Shetlands, the Icelandic, and Scandinavian (which are mistakenly admitted into the Shetland classes, until thousands think any parti-colored pony is a Shetland), is it at all well known that there is good money in breeding these cunning little rascals? There is a steady and a large demand for them, and they should do very well in this country, but to date most of them are being brought from England. As the "country-house" idea grows, and as the vacation habit becomes more firmly established, we will have more suburban life, and this will mean more ponies for the children, and even today the demand could be heavily stimulated by any man capable of handling the matter.

CARRIAGE PAIR, 16 HANDS—THREE-QUARTER BRED HACKNEYS
Bred and Owned by Mr. John Parrott

Trotters and Driving Classes.

The show of American trotters was small but unique, and this marvellous product of the horse world received greater applause than ever. It is a wonderful type when one stops to consider that it has been evolved, in about fifty years; from the old thoroughbred stock, wedged in with the Narragansett and Vermont saddlers and pacers, and that we have brought the trotting mile down to 2 minutes. How great this achievement is can be estimated when one remembers that it has taken the running thoroughbred men two hundred years to reach 1:35½ for the straight mile, and there it has stopped, as if no greater speed were possible. Some day, possibly, the trotter may catch up with the runner! There have been more unlikely things happen. It is also a pity that only the utilitarian horse appears to have any attraction for the multitude. There is no demand to see the really magnificent stallions and brood mares, with their produce. All the average man wants to see is the horse he can take out on the Speedway and raise Cain with the owners of less speedy animals. That the American trotter is the wonderful production it really is, he neither knows nor cares. Although the trotter has been aided by pneumatic tires, ball-bearings on wheels, etc., there is not the slightest doubt that the speed has really advanced in a tremendous manner, and this is shown by the high-wheel records constantly made as experiments today.

Consequently all attention at the show focussed upon the heavy harness and the runabout classes, and it may be safely said that nowhere in the world could such a grand gathering have been brought together. The reason for this is the wonderful versatility of the trotter. One can take sires and dams of suitable conformation and breed almost anything from them, either Hackneys or hunters. One bred for a trotter-Hackney took first prize in a Hackney class at a prior garden show without being discovered until later, this being The Devil's Deputy. Possibly the only criticism of the type was in the heavy harness classes, where the exhibits were undoubtedly too light for the type, weighing not more than 1050 pounds in any instance. As the U. S. Government is just about making breeding experiments along this line, and is going to gather types from the various shows as to what horses shall be bred to for the best types, this is a pity, unless the investigating officials wisely "moderate their transports" regarding the too light type shown at present.

One very pleasant feature of the show was the great increase in the classes driven by ladies, this being distinctly to be traced to the very good showing made by the Ladies' Tandem Club parade last summer in Central Park. It was then seen that a score or more of ladies acceptably "tooled" their teams through the park, and it was decided to offer prizes for them in the current show. Those appearing handled their teams to perfection, quite as well as they did the singles, with perfect ease, good, quiet hands, and proved cool and deliberate, even in a slight accident.

The problem of the correct gig horse is still in the stars. The famous Waldorf-Astoria cup was installed in an effort to bring about a distinct and recognized type of American gig horse, but instead it has simply been chaos, almost each year varying widely from the last. When Lord Brilliant won successively in

hunting field, a fence of never four feet six. Gauge the next "hog" jumper you hear so much about and you will be surprised to find how it scales down to the four-foot-six limit." These hunters are distinctly American [illegible] and the English hunters brought over do not compare with them. It must be said, in all fairness, that the English hunters were not bad in their performances [illegible] anything approaching their best work. They were the property of a wealthy [illegible] and [illegible] by him all last season, [illegible] in the garden, they [illegible] at the bottom of the list. This [illegible] is not any index to the idea [illegible] A[illegible] for our classes the Eng[illegible]. The [illegible] ing [illegible], and they [illegible] where we have [illegible] of high[illegible] K[illegible] by [illegible] by Henry [illegible] his [illegible] and is [illegible] Nursery Stud [illegible] Quicksilk II., [illegible] K[illegible] is a [illegible] of [illegible] with knowledge [illegible] like [illegible], [illegible] certainly [illegible] Jo[illegible] [illegible] to [illegible], making five [illegible] in two years and at Minneola, under

1900, 1901 and 1902, it was thought we had at last struck the desired type, but with his defeat by Forest King last year, came a horse with more "bone," almost to the verge of coarseness from our standpoint, witb exceedingly high action, but unable to carry it along at any great rate of speed. So this year was another problem to the owners and dealers alike, the one not knowiug what he had to show, and the other not knowing what to recommend as for suitable sale. When the award was made, it went to Hildred, an imported English horse, brought over when quite young, rather showy, full of fire, well ribbed up, and apparently a return to the Lord Brilliant type, rather than adhering to the Forest King lines. This idea, however, was somewhat jolted when one saw Burlingham, a typical brougham horse, with good action, but not a particle of speed, retained as second, leaving the question still unsettled as to which is, or is not, the accepted horse for the gig in this country. In England they have settled the question long ago, with a horse of the Forest King type. Here we do not seem to be able to make up our minds.

A very successful class was that for horses suitable for chargers, and for the first time an army man, Captain L. R. Andrews of the Fifteenth Cavalry, brought in a service horse and led the class through the manual, just to demonstrate what was a true charger type. The winner, El Queso, is of solid substance, clean cut, but up to heavy weight. High action at the trot, well in hand at the canter, but not spoiled in the gallop, too often the case where the canter has been developed. He was able to jump when called up, either high or along the level, and was in every way well shown. A magnificently schooled horse!

Thus, taking it all 'round, the show was a tremendous success, and it must be remembered that this success is very far reaching. The National show has been tbe fond parent of every other show held in this country, and these, in the mass, have undoubtedly introduced the American harness and trotting horse to the world at large—a most important matter, inasmuch as this country must be regarded as the great equine nursery of the world, from which alone the older countries of Europe can obtain cavalry remounts in stress of war, and to which they must also look for high-class and high-actioned harness horses. The figures of export tell the story, being absolutely nothing in 1881, rising to $780,000 in 1891, and in 1902 striking $3,600,000, with every possibility of approaching the $10,000,000 before another ten years have sped. This fact cannot be too fully commented upon and understood, especially through the great breeding interests of this country. The horse show, in varying sections, has done much to help this export increase along, and the more foreign exhibits we can bring to our great gatherings, the hetter it will be for the horsemen in this country.

The Baywood Stud.

It is now ten years since Mr. Jobn Parrott of San Mateo, purchased in New York the, at that time, untried Hackney stallion imported Green's Rufus and placed him at the head of the Baywood Stud, tben just established. Ten years is a short time in which to achieve success in any hreeding venture, hut in that time the reputation of Green's Rufus as a sire of bigh class carriage horses has heen firmly estahlished, and tbe Baywood Stud has become known as the one estahlishment on the Pacifio Coast where finisbed horses can be hought. Care and judgment were exercised in the selection of mares to breed to tbis stallion and tbose of the trotting breed were used wben those having the requirements of size, color, disposition and natural action could be found. Many pairs and single horses have heen sold from Baywood Stud during the past five or six years, but the supply has never been equal to the demand, so highly are tbe animals from tbis farm held in the estimation of tbose who want and are willing to pay for the best. It takes fully a year to finish up a pair of horses until they are ready for the carriage. Tbey must have manners that are as near perfect as possible, tbey must he sound, and have a conformation that suits the use to which they are to he put. Then they must have that quality that is called style, as no carriage pair that lacks the smart appearance so necessary to complete the *tout ensemble* of a first class turnout, will suit the person who demands the best. All these things have heen considered in the hreeding and the education of the Baywood Stud animals and the records of the horse shows and of the sales made are evidence that success has heen achieved.

Herewith are presented pboto engravings of a pair of carriage horses, and a grey mare that will make an excellent cross matcb with the off horse of the pair. Tbey were bred and are now owned at Baywood Stud. Hackneys are growing in favor witb many hreeders in this country. Mr. James Hohart Moore, of Chicago, wbo was an exhibitor at the recent National Horse Show, has just purchased twenty head of registered Hackneys in England. Mr. Eben D Jordan, propietor of the Plymouth Hackney Stud, Mr. Henry Fairfax of Virginia, Mr. W. D. Henry of Pittsburg, and Mr. R. P. McGrann of Lancaster are among those who are breeding Hackneys on a large scale, and whose farms are well represented at all the eastern borse shows.

Grey Mare, Five Years Old—Half-Bred Hackney
Bred and Owned hy Mr. John Parrott

The Del Monte.

Mr. Henry Clay Quimby, a traveler in many lands, a literateur and journalist, who has made his home at the Hotel Del Monte, America's most attractive summer and winter resort, bas issued the second edition of a unique and interesting little volume concerning Del Monte. From a critical and cultured standpoint he notes the peculiar charms of the place, tells of the glories of out-of-door life tbere every day in the year, of the marvels of the sea and the wonders of tbe hills, showing it to be a place where life may he enjoyed the year ronnd. The hook is weli worth reading and will be sent free on application to Geo. P. Snell, Manager, Del Monte, California.

A despatch from Ottawa, Ont., dated 1st inst., states: "Plans are under way for the great ice trotting meet which will be held here February 4 to 11. Eight thousand dollars will be hung up in stakes, including a $1000 purse for the five mile race, the greatest hetting event of the wiuter ice racing season in the Dominion. The track will he laid out on the river, about ten minuses' ride from the center of the city. It will he half a mile in length and of regulation shape, the snow being scraped to the sides to afford protection to the inside and outside horses. The track grounds are fenced in and the grandstand enclosed and will he beated for the meeting. Many American owners are expected to make entries for tbe various races, and the sport promises to be higb class

The Fastest Records of the Year.

Tbe fastest records for the year are as follows. Those records made against time are indicated by an asterisk, all others being race records.

TROTTING.

Two-year-old colt—Bon Voyage, h c hy Expedition 2:15¾, dam Bon Mot by Erin............ 2:15
Two-year-old filly—Bellemont, h f by Zombro 2:11, dam Daisy Q. Hill hy Altamont 2:26¾.. 2:20½
Two-year-old gelding—Jack Axworthy hy Axworthy 2:15½, dam My Trinket, hy Stamhoul 2:07½.................................. 2:15½
Three-year-old colt—Lord Revelstroke, br c by Bingen 2:06¼.............................. 2:12¾
Three-year-old filly—Grace Bond, b f hy The Bondsman, dam Grace Boyd hy Ashland Wilkes 2:17½............................. 2:09¼
Four-year-old filly—Tuna, h f by James Madison 2:17¾, dam Ituna by Steinway 2:25¾......... 2:08½
Four-year-old gelding—Tom Axwortby by Axworthy, dam Nell hy Estil Eric 2:08¾....... 2:08¾
Fastest mare—Sweet Marie hy McKinney 2:11¼ dam Lena Rivers by Carr's Mamhrino...... 2:04¾
*Lou Dillon by Sidney Dillon, dam Lou Milton hy Medium 2:25½............................ 2:01
Fastest stallion—Redlac, by Allerton 2:09¼, dam Grandma hy Muscovite 2:18................ 2:08½
*Jay McGregor by Jay Hawker 2:14¾, dam Notre Dame 2:23¾ by Robert McGregor 2:17½...... 2:07¼
Fastest gelding—Tiverton hy Galileo Rex 2:12¾, dam Folly hy Arragon....................... 2:04½
*Major Delmar hy Delmar 2:16¾, dam Expectation by Autograph 2:16½..................... 2:01¼
Fastest new performer—Stanley Dillon by Sidney Dillon, dam Athenian hy Steinway 2:25¾ 2:07¾
Fastest team record—The Monk by Cbimes and Equity hy Heir-at-Law 2:05¾................ 2:07¾

PACING.

Angus Pointer, b g by Sidney Pointer 2:07¼, dam Jane by Grant's Hambletonian............. 2:04¾

Dr. Summerfield Buys Two Good Ones.

Dr. J. J. Summerfield, the well-known veterinary of Santa Rosa, purchased last week from Mr. W. H. Lumsden of the same place two valuable young trotters. One of the animals was Lord Dillon, registered No. 39847, sired hy Sidney Dillon, sire of Lou Dillon 1:58½, the world's champion trotter, Dolly Dillon 2:06¾, Stanley Dillon 2:07¾, and others. Dam Roblet 2:12 by Rohin 2:22¾, sire of Roblet 2:12, Robizola 2:12½, Black Bart 2:17½, Cock Robin 2:20, etc.; second dam Eveline by Nutwood 600, dam of Maud Fowler 2:21¾ (dam of Sonoma Girl), Tietam 2:19, Roblet 2:12, Ole 2:11, McPherson (trial) 2:14, etc. Lord Dillon is a handsome bay stud colt and is generally pronounced hy Santa Rosa horsemen to be the best Sidney Dillon ever foaled.

The Doctor's other purcbase was Kate McKinney, by McKinney 2:11¼, the $50,000 stallion, dam Eveline, the great broodmare owned by S. B. Wright of Santa Rosa; she by Nutwood, the world's greatest broodmare sire. Dr. Summerfield has the nucleus of a great breeding farm witb these two.

There was great hetting on races in the early days of tbe century. It is quite probable that there are just now no men who gamhle quite as heavily, except in stocks, as the plungers in the early part of tbe century. There were in England a dozen men who made $250,000 books on the Derby alone, and as late as 1856 a bookmaker bet $500,000 to $5000 against eacb of three horses in one race. In 1843 the owner of tbe Derhy favorite hacked him publicly to [illegible],000, hesides the amount of his private bets. [illegible] of the hookmakers paid to one circle of [illegible] illion dollars when Lecturer won the Czare[illegible]

SWEET MARIE.

In 1903 California sent across the mountains a dainty equine fairy that astonished the world by accomplishing a feat that had been considered beyond the reach of a trotter. It was Lou Dillon, the first two minute trotter and the fleetest of all horses at that gait. This year California has sent another mare to excite the wonder of the East, but this time it is a racing Amazon. The classic forms and features of Grecian goddesses and heroines, as fashioned by sculptors of the Phidian age were cast in a beautiful but masculine mould. The figures of Diana, Minerva and even of Venus, whose exquisite lines make artists of the present day stand in awe and admiration of the genius that created them from a block of cold marble, are yet suggestive of strength and muscle and robust health, and strongly in contrast to the female form divine as present day artists mould it Sweet Marie is an equine goddess of the Phidian type, and while there is classic beauty in her form, there is also that evidence of great muscular power and endurance that is expected in equines of the masculine gender. She is large—16 hands—and when not trained down to racing form will weigh close to 1200 pounds. Her head is not small but is broad across the eyes and tapers finely at the muzzle. Her shoulders and hips are big and powerful, and she has great bone. The fineness of her coat and the prominence of her veins betoken the blood of a royal ancestry.

Her sire is McKinney, the greatest sire of trotters at his age that ever lived. The following statement in regard to the breeding and subsequent development of Sweet Marie is told by Mr. F. C. Schumaker of Los Angeles.

On June 28, 1893, O. H. Lockhart disposed of his entire stable of horses at Agricultural Park, Los Angeles, Cal. These consisted principally of broodmares and foals all of which were standard bred animals. Among the lot was a brown mare listed in the catalogue as:

Lady Rivers sired by Carr's Mambrino 1789; first dam Susie by Vermont 322; second dam by Highflyer; third dam by Owen Dale; fourth dam by Black Hawk. Lady Rivers is a brown mare foaled 1885, owned by D. K. Edwards, Los Angeles; 15¼ hands high, weight 1050 lbs. Never worked for speed but has trotted a mile in 3:10 in road condition. One of her weanling colts by Cannonball sold for $1000 at seven months old. Has a colt by Ashwood at foot and bred back to him.

Being particularly struck with the appearance of the colt I bid the mare in at $175. Six months later she foaled her second colt by Ashwood and after it had been weaned I concluded to use the mare on the road. I found her to be of a sulky, ugly disposition and a very undesirable buggy animal; after breaking up my buggy and ruining a couple of sets of harness I concluded to get rid of her. A colored man named Smart was then engaged in hauling manure from the track and I offered to sell him the mare to work in his double wagon, telling how she was bred and suggesting that he could raise a fine colt from her. After looking her over he said he would take her if I would breed her to some good horse. This was a year when horses were cheap; we had had two dry seasons and few were breeding mares. C. A. Durfee was standing McKinney at $60, and had proposed to me to send a mare to his horse in exchange for some photographic work; remembering this conversation I told Smart that I would breed the mare to McKinney and finally sold her to him for $100—forty dollars in cash and the balance to be taken out in hauling, which required about two years to close the transaction. About three years later I was brushing a fast pacer on the road and noticed this man Smart speeding a pretty bay filly in a cart and had hard work getting away from him. I noticed then that she could step some and he informed me that it was the McKinney filly out of the old mare; he wanted to sell her for $350, and I told W. G. Durfee about her; he looked at her but thought Smart asked too much. A few weeks later she was given to a colored trainer named Washington who drove her some very fast quarters and soon after sold her to Milo M. Potter.

FRANK G. SCHUMACHER.

Mr. Potter bought Sweet Marie twice. At the time Washington was working her Smart approached him and asked for an offer for the mare. Mr. Potter paid him $500 for her and she was given in charge of Vet. Kent and taken to Mr. Potter's stable where she remained for three days without work of any kind. At the end of that period Smart came around with the "baby act," he said he was a poor man and if he had his mare back he could get $1000 for her from a man he knew. Mr. Potter took back his check and returned the mare; Smart kept her a few days and making no sale asked Mr. Potter to take her back, which he did, paying the $500 and presenting Smart with a weanling colt as well.

Sweet Marie was three years old at the time she came into Mr. Potter's hands and seemed to be physically in bad shape, she was very thin and weak but quickly responded to good care and treatment. Her first start was in the Thanksgiving Matinee of the Driving Club and Mr. Potter expresses himself as having been keenly disappointed on that occasion. She was last in every heat and did not trot better than 2:55; he found her to be very unsteady and flighty, running to the outside fence and sometimes bucking for an eighth of a mile. Mr. Potter has some theories as to the development of a matinee horse and here was a chance to practice them; his idea was to get away fast the first quarter and rate along, and then finish with a rush through the stretch making as he expressed it a "grandstand play"; with this idea in view he commenced to work the mare fast quarters; frequently giving her eight, ten or twelve of them and seldom working her a full mile; when he did so, however, he always finished fast with her and she was immediately after taken to the stable and not asked to go further that day. The result of this training has been shown in Sweet Marie's races during the past season when it was noted how she always came with a rush through the last quarter, beating horses easily who could outfoot her the first part of it. During Mr. Potter's ownership of Sweet Marie she had the best of care and attention and was never worked enough to make her tired.

SWEET MARIE, DRIVEN BY A. P. McDONALD
From a Photograph Taken Between Heats of The Transylvania

When William Garland, her present owner, completed his Arizona railroad and began to reside permanently in Los Angeles, he was invited to join the Los Angeles Driving Club He observed Sweet Marie quite closely in several of her matinee races while being driven by Mr. Potter, and concluded that she was excellently gaited, as well as being good-headed—in fact, a very consistent animal all around. When she was sold at the time Mr. Potter closed out his stable, Mr. Garland made up his mind that he would begin bidding upon her when she reached $4000, and in case she went over $5000, he would let her go. The bidders, however, practically quit when she reached $3,000, and Mr. Garland made a bid of $3150 and took her. Her first matinee race after Mr. Garland purchased her was on Christmas. He being sick she was driven by a member of the Los Angeles Driving Club named John Felton, and was beaten in 2:18. After Mr. Garland began training her, he found that she

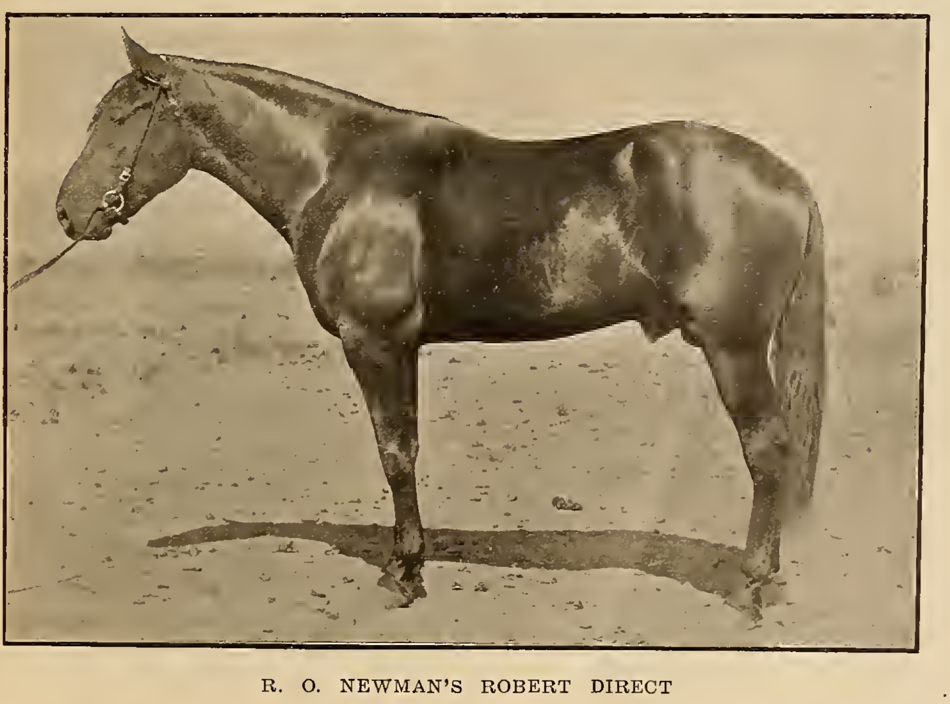
was quite slow in getting away, that being her weakest point, but he soon overcome that to a great degree, and before many months he won a matinee race with her in 2:11¼.

In the spring of 1903, Sweet Marie was put in charge of W. G. Durfee, the well-known Los Angeles trainer, and he prepared her for the races on the North Pacific Circuit. There was a four weeks' meeting at Seattle, and during that time she started in six races and won them all without being beaten any heat. One of these events was a dash, one was best three in five, and the others best two in three. The best time she made in any of them was 2:15¼. The next meeting was the Oregon State Fair at Salem, and here that unfortunate occurrence took place wherein both she and Mr. Durfee were expelled. After winning the first heat in 2:13¼, Sweet Marie was beaten less than three feet the second heat in 2:12½, her driver was accused of pulling her and on refusing to give her up to another driver, was ruled off together with the mare. Sweet Marie was reinstated by the Board of Review of the National Trotting Association at its next meeting, and Mr. Durfee was reinstated by the Pacific District Board of Appeals.

The history of Sweet Marie's campaign on the Grand Circuit is known to every horseman, and there is no use repeating it here. She was beaten but one race and closed the season the undisputed champion trotting race mare of the world, with a record of 2:04¾. She started in 13 races in which 41 heats were trotted. Of these she won 12 races and 27 heats, and trotted one dead heat. She trotted 21 heats in 2:10 or better and the average of these heats was 2:07½. She has started in just 20 races during the two years she has been campaigned and won a total of $25,500. She holds the world's record for a trotting mare in a race, the world's record for the fastest third heat, and the world's record for the fastest five heat race. She has never been prepared for a fast mile against time, but the opinion is almost universal among horsemen that she will be able to trot a mile in two minutes, and be less distressed after the effort than any of the trotters have been that have beaten her record of 2:04¾.

Next in Line.

Color, conformation and breeding are three requirements in a stallion, and Robert Direct, foaled April 28, 1901, the property of R. O. Newman of Visalia, looks to be, on these three qualities alone, the heir apparent to the throne of Direct 2:05½, probably the greatest of all stallions bred in California. Robert Direct is a black stallion, as black as the raven's wing, and without any white. He is sixteen hands high with a conformation so like his sire in other respects that the picture of one could almost pass for the picture of the other. His sire Direct 2:05½ is one of the most remarkable horses living. After taking a trotting record of 2:18 as a three-year-old, he was shifted to the lateral gait and the story of his triumphal trip through the Grand Circuit, his defeat of all the champions of his day and his wonderful gameness and race horse qualities are a large part of the history



R. O. NEWMAN'S ROBERT DIRECT

of California horses that have been champions on the track and afterwards earned fame as the sires of champions. Direct stands up close to the head of the list of 2:10 sires. He has to his credit the trotters Directum Kelly 2:08¼ and Direct View 2:08¾, besides the pacers Directly 2:03¼, Direct Hal 2:04¼, Bonnie Direct 2:05¼, King Direct 2:05½, Prince Direct 2:05½, Trilby Direct 2:08¼ and Rey Direct 2:10. It is useless to say more of Direct. Every horseman knows that he is the greatest of the sons of Director who was the greatest of Dictator's family. On his dam side Robert Direct has royal blood as well. His dam Daisy Basler is a full sister to Ethel Basler, the dam of My Way 2:22 as a three-year-old and Stonelita 2:20 as a two-year-old. She is by Robert Basler record 2:20, register number 0180, that sired Jonesa Basler 2:11, Dr. W. 2:12½, De Bernardi Basler 2:16¼, and the dam of my Way 2:22 and Stonelita 2:20. His second dam is Richmoor by Pasha 2039, son of Sultan 1513 and sire of the dam of Toggles 2:08½. His third dam is Miss Rowland by A. W. Richmond 1687, sire of 12 standard trotters and pacers and of the dams of New Richmond 2:08¼, Waldo J. 2:08, El Diablo 2:11¼, Rex Gifford 2:14, Anteeo 2:16½, Antevolo 2:19½ and many others. Robert Basler himself carries a cross of A. W. Richmond as he was by Antevolo, son of Electioneer and the great broodmare Columbine by A. W. Richmond. There is no better bred son of Direct than this three-year-old of Mr. Newman's and there is none that looks more like the premier of James Butler's great East View Stock Farm. It is fortunate for the breeders of California that such a stallion is here for them to breed to. In addition to all the other qualities of the Director family he is endowed with size, which counts for much when sale day comes. The Directs have the winning habit in a very strong degree. They are called upon year after year to meet the pick of all the breeding farms and training tracks in America, and they usually make good.

Robert Direct will be in the stud during the season of 1905 at the farm of his owner, Mr. R. O. Newman, ten miles northeast of Visalia, at $50 the season and we can assure our readers that no mistake can be made in breeding to such a horse. He is high-class in looks, in breeding and in everything that goes to make a sire of speed, and he will be prominent in the Great Table as soon as his get are old enough to face the starter.

Neernut's Get Are Fast.

Electioneer, Nutwood, Whipple's Hambletonian and Williamson's Belmont were four sires whose blood has come down to the present generation through champions. Lou Dillon 1:58½, Major Delmar 1:59¾, The Abbot 2:03¼, Azote 2:04¾, John A. McKerron 2:04½, Directum 2:05¼, Sweet Marie 2:04¾, Arion 2:07¾ and many more 'too numerous to mention," carry the blood of one or more of the above named sires. Neernut 2:15¼ the subject of this sketch, carries the blood of all of them and besides being a race horse himself

G. W. FORD'S NEERNUT 2:09¼

and the winner of one of the fastest six heat races ever trotted, has proved that he transmits speed by siring twenty-four colts and fillies that have worked, matineed and raced from 2:09½ to 2:30 and these are all of his get ever trained.

Neernut is by Albert W. 2:20, son of Electioneer and Sister, great broodmare by John Nelson. His dam Clytie 2d is by Nutwood, the greatest of all sires of producing dams, his second dam by Whipple's Hambletonian, sire of the dam of Azote 2:04¾ and his third dam by Williamson's Belmont.

Neernut is 15¾ hands; blood bay with black points, weighs 1100 pounds, and trots without boots, weights or hopples. He is a strong finisher, his last quarters the best of his miles, and his record mile of 2:12¼ was pronounced by competent observers to be as good as 2:08, he starting five lengths behind, trotting around the first turn in fourth position and going the entire mile well out from the pole on account of footing. His individuality, breeding and speed guarantee his success as a sire. His oldest colts are now coming eight-year-olds, and they all show speed, his daughter Neeretta, taking a record of 2:16¾ at three years old at Santa Rosa five months after broken to harness. In 1899 she started six times, winning five first moneys and one second, getting a record at Los Angeles of 2:12½, which is the world's record for four-year-old fillies for 1899. During the season of 1900, Neeretta had to compete with the fastest horses of the East. She started nine times, winning five first moneys, two seconds and two thirds, getting a record at Galesburg, Illinois, of 2:09½, which was the record of five-year-old fillies for 1900. She is the only one of his colts ever campaigned, although all of them show great speed—twelve of which, with a few weeks' work, showed miles over the Santa Ana track from 2:17 to 2:19. He never sired a colt but that could out-trot its dam before it was weaned.

Mr. Geo. W. Ford of Santa Ana, Cal., owner of Neernut, sold a carload of his stallion's get at Cleveland last spring. He writes that he has received word from all the parties who purchased them and that they write very flateringly of the work these youngsters are doing, and all seem to think they have race horses and expect to go down the line with them next season. Some of them have already made an excellent showing at the matinees this year.

There are a number of Neernuts in training at Los Angeles now and showing well. Three of them started in the Driving Club races on Thanksgiving Day and did credit to themselves. They all have the racing instinct and trot or pace fast from the first. Mr. Ford has a number of them now at the Santa Ana track, which he owns, and is having them shaped up for sale. He expects to have a sale at Los Angeles the last of February and clean out all but his yearlings and weanlings as his farm is getting over stocked and he has no time to give them, having many important interests that require his time. They are surely a grand lot of colts—good size, color and dispositions and can all now step a 2:40 gait or better and but two months out of pasture and then unbr[illegible]. They look now as if they would do to go to th[illegible] with [illegible]th year.

A ROLL OF HONOR FOR 1904.

... the Consistent Race Horses of ... and Accomplishments of the Sea... ...ngs—Look of the Various ... Two-Year Racers—California ... Will Be Presented.

By RALPH B. TOZER.

"Consistency, thou art a jewel," is an ancient and very true proverb, and when it applies to a consistent race horse, the jewel is a particularly pleasing one. As showing how rare these jewels of consistency are it can be shown by the official turf guide that not above 4100 horses took part in running races on this continent during the season now nearing a close. Of this number just 208 won 33 1-3 or more per cent of the races they engaged in, or just about 5 per cent go on the "roll of honor" through their "consistency." Of the 208 equines spoken of, 52 are two-year-olds, 40 three-year-olds, 107 are four-year-olds or upward.

Imp. Pirate of Penzance stands first as a sire of consistent two-year-olds, with Loretta M., Miss Inez and Pirate Polly to his credit. Hamburg sired the great Artful and the "classy" Princess Rupert; imp. Goldfinch begot Song and Wine and the phenomenal Tradition, while imp. Woolsthorpe, an English horse but a few years in this country, attracted attention through the performances of Hallie Sherman and Zinda.

Oiseau, a Tennessee-bred colt by imp. Ornus, won the most races, fifteen, with The Mist, by Magnet, second, with twelve.

The leading sire of consistent three-year-olds is Ben Brush, the game little Bramble horse, with Broomstick, Delhi and Lady Amelia to his credit. Imp. St. George sired the wonderful Bear Catcher and the game St. Noel; Hamburg begot the clinking good Hamburg Belle and Mimosa, while Lamplighter is well up with Footlights Favorite and Lampadrome. Imp. Star Ruby is responsible for Letola and Planet; imp. Esher for Moharib and Silk Maid.

The principal race-winning three-year-old was the bay filly Spencerian, the Free Knight—Sarah Davis, which in forty-one starts has won twenty-three races, a record for winning for a season equalled on but few occasions in this or any other country. As Spencerian won her four last starts, it is quite likely she will add two or three brackets to her already long list before the bells ring out the old year. Second to Spencerian as a race-winner is the California bred filly Alma Dufour, by imp. Artillery, with seventeen victories in 1904. All of which demonstrates that fillies are good racing propositions at this age as well as at two years. Scanning over the list of race-winning youngsters you will find Del Carina, with ten wins; Arlena with eight; Dishabille with eight; Handzarra, ten; Lady Savoy, eight; Loretta M., nine; Miss Inez, nine; Pirate Polly, eight; Subtle, eight; The Mist, twelve, and Tradition, eight—certainly a great showing for the fillies—while the only colts to win eight or more races were Oiseau fifteen; Kurtzman, ten, and Pinkerton, eight. This should dissipate all the prejudice existing against training two-year-old fillies, the record standing eleven splendid race-winning fillies against three colts of equal caliber.

As sires of consistent racers at four years of age and upward, Kingston and imp. Lissak are in front, with three performers each, Klngston's being Delagoa, Port Royal and Hurst Park; Lissak's trio, Malden, Claude and Paul Clifford. Lissak's sire, imp. Loyalist, got two consistent ones in Van Ness and Sir Tom Tiddler. Other sires represented by two in the "roll of honor" are imp. Atheling, with Aden and Shrine; imp. Piccolo, with Jim Hale and Gladys Belle; imp. St. George, with Merry England and Irene Lindsey; The Hero, by Money Muss and Billy Mahan; Clifford, by Caughnawaga and Molly Brant, two very speedy performers; imp. Star Ruby by Barklyite and Honolulu; Knight of Ellerslie, by Attila and Erbe, and imp. Golden Garter, by Dainty and Elastic.

Summing up the worth of the various sires, from the record of consistent performers which follows, it would look as if the best all around sires were imp. St. George, Hamburg, Ben Brush, imp. Lissak, and imp. Star Ruby, in the order named. These stallions beget good performers at two and three years, as well as at four and upward, while imp. Pirate of Penzance and imp. Goldfinch appear to be particularly clever at begetting brilliant two year-olds. The unbeaten Meddler, through the heavy winnings of Colonial Girl and Tanya, will head the "winning stallions" list in America in 1904, but the real test of ability, to my mind, does not rest upon money winnings, but upon ability to sire horses that can go on winning from two-year-olds until they are old horses, the higher the percentage of wins the better the "class." With this in view, the following table of "jewels of consistency" is submitted:

Artful ran the Eclipse Course at Morris Park in 1.08 flat, 130 pounds up, winning easily; won The Great Filly Stakes, Futurity course, at Coney Island, in 1:11 3-5, 124 pounds up, and won The Futurity in 1:11 4-5 in a canter by three lengths, 114 pounds up. Tradition was second with 127 pounds up, a neck before Sysonby, with 127 pounds. She was practically unopposed, running second to stable companions twice, Mr. Puryear declaring to win with them in preference to Artful.

Tradition ran second to Artful for The Futurity, carrying 127 pounds to the winner's 114, and being beaten by three lengths easily. Allowing nine pounds for winning margin and four pounds for the easy way this would make it a toss-up between Artful and Tradition for first honors in the two-year-old form.

Sysonby, carrying 127 pounds, was beaten but a neck by Tradition in The Futurity and won the remaining races he engaged in, five in number, it would make Tradition but about one pound better than the Melton colt, pride of the Keene stable, and as Oiseau, son of imp. Ornus and Kitty Gunn, defeated Tradition tor The Champagne Stakes at Morris Park, track heavy, carrying 122 pounds to the filly's 119, the Tennessee-bred colt must figure close up. This would indicate that there was less than three pounds between the best of the great quartet of two-year-olds that raced at the far East—a state of affairs probably never paralleled in this country, though it was nip and tuck between Domino and Dobbins, the dead-heaters in a match not so many years ago. Tanya is close up to this quartet also, being beaten in The Futurity only.

The Middle Western two-year-old championship is also clothed in considerable doubt. Among the colts it is decidedly close between Broomhandle and Kurtzmann, while it is hard to separate Miss Inez, Lady Savoy, Dishabille, Loretta M. and The Mist, all being stake-winners and excellent weight-carriers. Broomhandle won but four races, but was second five times and third once, never failing to secure some part of tbe purse.

The undoubted three-year-old champion colt of tbe West was Bearcatcher, by imp. St. George-Sallie McAllister. He won ten out of the twelve races he started in, and all were remarkable victories from a "time" standpoint. He ran six furlongs in 1:12 2-5, 104 pounds up, ran twice in 1:12 3-5 (once with 109, and again with 111 pounds), at Chicago, and in 1:12¾ with 106 pounds, and 1:13 with 113 pounds at Oakland, Cal. At Kansas City he did six furlongs in 1:13, with 116 pounds up. In the September Stakes at Hawthorne, Bearcatcher ran a mile, eased up, in 1:39, 107 pounds up, and at Kansas City ran one of the most remarkable races on record for a three-year-old—a mile and a sixteenth, galloping, in 1:45½, carrying 124 pounds. This is the track record, and allowing a shade over a quarter of a second for "winning in a gallop," it is rather to be doubted if this performance was ever equaled. He could have gone 1 1-16 miles that day in 1:45 1-5, carrying 124 pounds.

Beldame, undoubted champion three-year-old filly of the far East, generally went longer distances than did Bearcatcher. Her best performances were 1⅛ miles easily in 1:53, 126 pounds, at Coney Island; 1¼ miles in 2:06 easily at Brooklyn, 114 pounds; 1⅜ miles in 2:19 3-5, 123 pounds, at Coney Island; mile in 1:38 1-5, 115 pounds, at Brighton Beach (Hermis winning by a length in 1:38 flat, with 133 pounds up), and seven furlongs in 1:27 flat easily at Aqueduct, 103 pounds. Take her at a mile and a sixteenth, on her good second to Hermis at a mile in 1:38, and Beldame would have been able to go the mile and half a furlong in 1:45 2-5, carrying 124 pounds. As this would be three-fifths of a second below the track record, Bearcatcher, at equal weights (124 pounds) can be accounted four-fifths of a second the faster animal at a mile and a sixteenth, or twelve pounds in weight, at least.

Tokalon (by Tammany-Enid), clearly the best three-year-old filly in the Middle West, ran six furlongs in 1:13 3-5, 117 pounds, at Harlem, winning easily; went seven furlongs in 1:26 1-5, galloping, 95 pounds, Harlem; a mile in 1:38 4-5 easily, 98 pounds, Harlem (in the Chicago Stakes); mile and three-sixteentbs in 1:58 2-5 easily, 108 pounds, in the Twentieth Century Handicap at Harlem. On her last-named victory she should take up 124 pounds and run a mile and a sixteenth at Harlem in 1:45 flat, or one second behind the track record. This would make her six pounds behind Beldame, the great Eastern filly. Considering the two track records, and Beldame's mark would be three-fifths of a second behing the Brighton track record, against a second behind the Harlem track record for Tokalon. This makes Bearcatcher a phenomenal race horse. It is doubtful if any racer ever had such a series of speedy performances to his credit in one season as goes to the honor of the brown son of imp. St. George and Sallie McAllister, which was bred at the Kingston stud, Lexington, Ky., by Mrs. Jas. Ferguson, brought to California as a yearling, and developed under the sunny skies of the Golden State.

TWO-YEAR-OLDS.

The 1904 records of Hermis and Molly Brant, respectively, in the table of four-year-olds and upward, is worth printing, it not being so long as to be tiresome, yet so good withal. Hermis' is:

Won at a mile, Brighton Beach, 133 lbs., in 1:38 flat (Test Handicap).
Second at 1¼ miles, St. Louis, b'n 3 lengths, 130 lbs., in 2:09½; heavy track (World's Fair Handicap).
Won at 1¼ miles, Coney Island, 127 lbs., in 2:05, pulled up (The Suburban Handicap).
Won at 1⅛ miles, Brooklyn, 125 lbs., in 1:52 4-5, easily (The Brookdale Handicap).
Third at 1¼ miles, Brooklyn, 128 lbs., b'n badly, in 2:10; heavy track (The Standard Stakes).
Fourth at 1¼ miles, Brooklyn, 127 lbs., b'n 2½ lengths, in 2:06 3-5 (The Brooklyn Handicap).
Won at a mile, Morris Park, 128 lbs., in 1:39½, pulled up (handicap).

The above record of Hermis goes to show that he does not like a heavy track and that he is a world-beater at a mile.

Molly Brant's record is:

Second at 1 3-16 miles, Morris Park, 126 lbs., b'n 1 length, in 2.02 1-5 (handicap).
Second at a mile, Coney Island, 119 lbs., b'n 1 length, in 1:39 3-5 (purse).
Won at 1⅛ miles, Saratoga, 122 lbs., in 1.56 2-5; heavy track (The Champion).
Won at 1⅛ miles, Saratoga, 117 lbs., in 1:51 3-5 (The Merchants' and Citizens' Handicap).
Won at a mile, Saratoga, 112 lbs., in 1:39 3-5, easily (The Delaware Handicap).
Won at a mile, Saratoga, 109 lbs., in 1:40, easily (handicap).

Sires of two or more performers in the above "Roll of Honor" were:

Imp. St. George—Bearcatcher, Irene Lindsey, Merry England and St. Noel.
Hamburg—Artful, Hamburg Belle, 'Mimosa and Princess Rupert.
Imp. Lissak—Claude, Malden, Paul Clifford and Woodlawn Belle.
Imp. Star Ruby—Barklyite, Honolulu, Letola and Planet.
Kingston—Delagoa, Dolly Spanker, Hurst Park and Port Royal.
Hastings—Cantaloupe, Glorifier and Toscan.
Ben Brush—Broomstick, Delhi and Lady Amelia.
Imp. Atheling—Aden, Shrine and Spring.
Imp. Pirate of Penzance—Loretta M., Miss Inez and Pirate Polly.
Imp. Rossington—Good and Plenty, Rip and Nannie Hodge.
Knight of Ellerslie—Attila, Brancas and Erbe.
Imp. Esher—Maor Mansir, Moharib and Silk Maid.
Lamplighter—De Reszke, Footlight's Favorite and Lampadrome.
Imp. Sain—Deutschland and Pinkerton.
Imp. Woolsthorpe—Hallie Sherman and Zinda.
Clifford—Caughnawaga and Molly Brant.
Imp. St. Andrew—Sandy Andy and Sileo.
Filligrane—Knowledgje and Viperine.
Ornament—Princess Orna and Stroller.
Imp. Goldfinch—Song and Wine and Tradition.
Octagon—Beldame and Woodsaw.
Imp. Golden Garter—Dainty and Elastic.
Imp. Ben Strome—Big Ben and Subtle.
Imp. Loyalist—Sir Tom Tiddler and Van Ness.
Riley—Creolin and Rough and Tumble.
Imp. Mirthful—Canteen and Neversuch.
Carlsbad—Coligny and Trenct-the-Mere.
Jim Gore—Byronerdale and The Goldfinder.
Falsetto—Floral Wreath and Pronta.
Handsome—Fine Cut and Clifton Forge.
Tammany—Caller and Tokalon.
Imp. Piccolo—Gladys Belle and Jim Hale.
Imp. Meddler—Colonial Girl and Tanya.
Flambeau—Flammula and Little Woods.
The Hero—Billy Mahan and Money Muss.
Requital—Flyback and English Lad.
Free Knight—Lev. Dorsey and Spencerian.
Hanover—Handpress and McGrathiana Prince.
Sir Dixon—Capt. Arnold and Outcome.
Imp. Hermence—Hermis and Red Leaf.
Flying Dutchman—Airship and Bad News.

TEDDY FOLEY'S ST. LEGER.

CHAPTER I.

The great St. Leger race of 1901 will never be forgotten by those who saw it. Since the St. Leger of 1882, when Dutch Oven frolicked home at 40 to 1 in front of the Oaks winner, Gehenimiss, with Sbotover, winner of the Derby and two thousand, in third place —three mares running 1, 2, 3 for the only time in English history—tbere has been no such surprise party as the Leger of 1901. I saw the race myself. In a conversation with a friend in London four days before the race, he said:

"They are laying only even money against Volodyovski now, and he will be an odds-on favorite on the day of the race, for tbe first time since Ormonde won it, but it goes witbout saying that altbougb he is a good colt, he is no Ormonde by several yards. I have an idea that he will not be better than third, somehow or otber. Of course, being an odds-on favorite, the books would like him to win, for tbey will not lay against bim."

"What horse is likely to beat him? William Darling tells me that be will scratch Cap and Bells, as she is lame—showed that on the day after tbe Oaks, in fact," I answered.

"I don't think she would figure even if she started," said my friend. "She won the Oaks, to be sure, and won cleverly, but she beat a very ordinary lot. She is no Memoir, no Apology, nor yet a Dutch Oven, and sbe is not to be mentioned on tbe same day with Formosa or La Flecbe."

"What do you consider the next best horse in the race after Volodyovski?" I asked.

"It is hard to say—a very open race at best. There's Fortunatus, for instance. He is a good game colt and won the Goodwood Cup with ease, but that is a race tbat takes the speed all off a colt. The Goodwood Cup has been run since 1823 and won many times by a tbree-year-old, and in fact, The Bard, at tbat age, walked over for it. But in all these seventy-odd years no three-year-old has ever been able to win a Leger after winning a Goodwood Cup."

"Well, that is a singular coincidence. Now what next?"

"Veronese, belonging to Douglass Bond, ought to be in the money and if Volodyovski cannot win it, I would as soon chance him as any of tbem. He ran third in the Derby, and the second horse is scratched, so Veronese's chances look good, though bis last race was a poor one."

"How about Mr. Rotbschild's colt, Doricles?" I asked.

"Well, he is a fair colt, but not good enough to win a St. Leger, for while he is game enough, he never showed any speed. At Goodwood last year he made a dead heat witb Veles, whom he caught very tired, and if he had any speed at all should have beaten him.

On the strength of this I hunted up "tbe American's friend," Bob Masters, and commissioned him to put £10 each way on Veronese and £10 a place (which means either second or third in English betting) on Fortunatus, the latter ticket calling for £30 and tbe former for £95 if Veronese won. And that being done, my wife and I packed our trunks for York, going over to Doncaster on the morning of tbe race. But what has all this to do, the reader will ask, with a party named Teddy Foley?

CHAPTER II.

The north of Ireland is a manufacturing country, while the southern part is devoted almost exclusively to agriculture and pasturage. Every July sees a perfect stampede from Dublin to iLverpool, the steamers being packed with stalwart young farm laborers. Templemore is a pretty little town on the line of tbe railway from Dublin to Cork, and living there was a widow named Foley, who had two daughters and a son named Edward, known always as Teddy to the neighbors. He was a bright, handsome young fellow and honest as the sun, but he had a mania for betting that always kept him poor. Every summer saw him at work in the harvest fields in England, with smiling face and cheery manner, and every autumn saw him landed back in Dublin witb just about enough to pay his railway fare to Templemore. His good mother chid him frequently for his love of gambling.

"I can't help it, mother, dear. I suppose its the divil that is timptin' me intirely, but I can't hould on to a thraneen (Irish name for shilling) whin I see the horses come out an' tbe biys in their silk jackets."

"But," interposed his mother, "you know you have asked Nora O'Malley to be your wife, and you can't expect a good a girl as sbe is to marry a man wbo can't stay away from a race track long enough tc buy himself a new pair of brogues."

"Well, mother," said Teddy, "I promise you I will turn over a new leaf on the first of tbe year, and after that divil a happorth will I bet on anniething at all, at all."

A few days later Teddy started off for Liverpool. The farmers in Staffordshire for whom he had formerly worked were only too glad to take him back, for he was industrious as he was genial and good-natured. All summer long he worked and sent back the greater portion of his earnings to bis mother by mail. The last week of August found him at work about half way between Lincoln and Doncaster, and then came the bright September with all the forest trees turned to a sheen of purple and gold. On the morning of the St. Leger day he was at Doncaster and got a cheap breakfast for eighteen pence. At noon he was walking out to the Town Moor with but few pedestrians on the road. He had gone a mile, when he saw the crowd thickening behind him. Just then along came a tally-ho laden with gaily-dressed ladies and gentlemen, all in the beight of fashion. A cloud of dust arose as the six chestnuts dashed past him, and then, out of the cloud something seemed to fall to tbe ground slowly, and wavering through the air as it fell almost at his feet. It was a five-pound note.

"Shtop! Shtop!!" cried Teddy. "Hould on tbere, sor, yez have dhropped yer money!"

But nobody heard him nor cared, as the huge vehicle rattled on towards the course. Arriving at the track he went over to the carriage paddock, but there was no vehicle answering the description of the big coach that had passed him. It was evidently bound for some country manor for luncheon, its occupants intending to return to the Town Moor in time for the races. So Teddy put the money in bis pocket. Tbe grounds are free to all, but if you want to sit down, it costs you some money. Tickets to the grandstand on St. Leger day are £3; in the county members' stand £2, and to Reed's stand, about a bundred yards up the track, the price is £1. Reed's stand was good enough for us that day.

The first race was at two miles for the Rufford Abbey Plate, for whicb the first choice was a curious-looking bay mare named Congratulation, at 2 to 1, the second choice being a big brown gelding called Uncle Mac, who had won the Chester Cup of tbe previous year. As tbe borses came out of the saddling paddock, Teddy called out to a bookmaker on the opposite side of the fence:

"What price is Uncle Mac?"

"Five to two," said the disciple of Ikey Mo.

"Here's a fiver," replied Teddy.

"Twelve pound ten to five," said tbe bookie, and handed out a ticket.

Congratulation was pounded to 8 to 5 before tbe start and Uncle Mac went back to threes. The pace was slow for about six furlongs, when Congratulation shot out into tbe lead and Uncle Mac was in the fourth place. Around the upper turn the filly led by two lengths, while the old brown horse bad moved up into third place. The roan-legged filly still held her advantage, but that homestretch at Doncaster is 686 yards long and calls for a determined finisb. As they reached a point above tbe carriage paddock, Uncle Mac passed the second horse and lapped his bead on Congratulation's hips. Stride for stride and bound for bound, they came to the judge's box and then the mare faltered, the old brown horse winning by a neck.

The second race was for two-year-olds, and Teddy did not care to play it. Tbe third race was the St. Leger, and Teddy, having cashed his ticket, went around to the front and paid a sovereign for admission to Reed's stand, wbich also gave him the entry to the betting ring, but not to the saddling paddock. He waited till the bugle counded for the St. Leger. Teddy walked down to a bookmaker and asked:

"What prices?"

"Two to 1 on Volodyovski; 5 to 1 against Veronese; 8 to 1 Fortunatus and Aida; 40 to 1 Doricles and Revenue, and 12 against any of tbe rest."

"Give me £10 on Doricles," said Teddy.

"Four hundred to 10 on Doricles," said Mr. Moses Solomons.

Teddy went upstairs into the stand and looked about him at the sea of anxious faces. The horses came out and paraded before tbe stand, Volodyovski going with a daisy-cutting step that evoked a volume of cheers. Then came Veronese, a chestnut beauty, and Fortunatus, a massive bay. A faint cheer arose as a stalwart-looking bay swept by.

"What horse is that?" asked Teddy.

"Revenue. He's an Irish horse owned by Gubbins of Tipperary."

"Ou, wow, and I've bet forninst bim," moaned poor Teddy.

Arthur Coventry marshaled bis forces at the starting post around the first turn. Had Sir James Miller's filly Aida been scratcbed, the St. Leger of 1901 might have been a different story, but the black daughter of Galopin was the worst of bad actors and before they had been at the post ten minutes she had gotten the wbole of them into trouble. Fortunatus kicked her and then Volodyovski began to cut up and raise tbe dickens. At the end of eighteen minutes tbey were off amid deafening cheers. There was no great attempt at pace till they had gone half way up tbe back stretch, when Fortunatus assumed the lead, but Aida bumped bim, and he fell to his knees. Reiff now started to move up with tbe favorite, but Aida cannoned on him and then Revenue gave him a hard bump. Next along came Doricles, and he rapped tbe favorite harder than any one bad done. Into the stretch they came, Doricles in the lead, Revenue second, Veronese third, and the favorite, fourth. Volodyovski passed the chestnut above tbe carriage paddock, when Revenue gave him another bump, though they were well past the ruck and there was plenty of room. Reiff now made bis final effort and passed Revenue, but could not quite reach William Rothschild's colt, who won by half a length, and Revenue, who never would have gotten any part of the money had I been a judge, was third. I never saw foul riding if he was not ridden foul, but they gave him third money and bis backers for place pulled down 8 for 1.

CHAPTER III.

The St. Leger was over and Teddy Foley had won £417.10 on tbe day. He hired a cab and drove to tbe Royal Arms in Doncaster, where he got a room for £3 which would have cost him twice that amount on the previous night. The next morning's Doncaster Courier contained the following advertisement:

Found—On St. Leger day, a £5 note. Owner can have the same by proving property.

EDWARD FOLEY,
Royal Arms Hotel.

Poor Teddy was beseiged by callers before be got his breakfast next day, but none of them answered tbe description of the party on the big tally-ho. Teddy took a second-class ticket tbat afternoon for Liverpool and arrived home late the next night with £415 in his pocket. Two weeks later there was a quiet wedding in the old Templemore church and Norah O'Malley became Mrs. Edward Foley. Teddy at once settled down as a cattle-drover and has made an excellent living for the family ever since. Both his sisters have married well and there is a general reign of prosperity in the family. The long-shot of the millionaire Rothschild, who thought so little of his colt's chances that he did not see the race, nor bet a shilling on Doricles, was responsible for Teddy's elevation from the rank of a day-laborer.

And sometimes the farmers of Staffordshi[illegible] Yorkshire wonder what has ever become of t[illegible]-faced Irish lad who used to sing "Norah [illegible]" so sweetly.

HIDA

THE FARM.

"CALIFORNIA'S GREAT NEED—BETTER DAIRY CATTLE."

Speech of Professor E. W. Major of the University of California, before the California Creamery Operators' Association, in session at Fresno, Cal., December 3, 1904. (Reported by a stenographer):

Mr. Chairman and Gentlemen of the Association—When I received a letter from the secretary asking me to talk on the subject, "California's great need—better dairy cattle," I thought that he had made a definite statement of a fact and left very little opportunity for argument. I think there are few of you who would want to contradict that statement. Every one interested in dairying will admit that one of the greatest needs of dairymen is better cattle. The importance of this question of the creamery operator, too, may, at first sight, not seem so great, but it really is one of the most important subjects to consider. The creameryman depends entirely upon his milk supply to make his business profitable. If you start a creamery in any section its success depends very largely upon the amount of milk you get, and that depends upon the number and quality of the cows. In establishing a creamery you have to expend a certain amount of money for the plant and you have a certain fixed expenditure for operating expenses, and once in operation it will cost you just about as much to operate it, whether you handle a large or small amount of milk. The creameryman is therefore much interested in his patrons having better cows. It is equally evident that the dairyman is also interested in getting better cattle. No dairyman goes into the business purely for the pleasure that is to be secured in doing that kind of work. Those who have had experience in the business, milking twice a day 365 days in the year, will certainly agree with me, that if the business does not pay there is very little satisfaction to be derived from the fun there is in it. If at the end of the year, when you balance up your accounts, you find that the cow has just about paid for her keep, and for your profit you have the satisfaction of knowing that you have had the pleasure of milking twice a day throughout the year, you will not be liable to continue long in the business.

Better cows will encourage the farmer to keep more cows, and his neighbors will be encouraged to go into the dairy business. They will say, here is a man who is getting a good income from the creamery; they will see that it is a profitable business and will be more inclined to take it up, and thereupon the creamery in that locality will profit by this increase in better dairy cattle.

The question of how we shall secure these better dairy cattle, is rather more important than the one which says that the great need is better dairy cattle. To my mind there is still a broader question than just this one of better dairy cows, and that is, that in addition to getting better dairy cows, we want better dairymen—a better class of dairymen. We want men who will devote more thought and attention to their dairies. Better cows alone will not increase the profits of the business unless the men that handle them pay more attention than they do, as a rule, to their business. The question is a broad one and involves not only the question of getting better dairy cattle, but that of better management of the cows we have. The advantage of this side of the question, as to better management and better feed, is that we can put it into application at once. A man can go home and make up his mind that he will feed his cows better than he has fed them before, shelter and care for them better, and he will actually lose fewer cows than he used to; he will raise his heifers so that they will come in in better shape and his profits will begin to increase immediately.

The question of improving his herd is a much greater one; it will take more money and more time. There is no doubt that if every dairyman had a sufficient amount of money at his disposal and could go out and select excellent cattle to replace the cows he has, he would at once commence to make larger profits; unfortunately, however, we cannot all do that, and must do the best we can with what we have.

Another thing, I would advise every dairyman to find out exactly what his cows are doing. If we take the report of the State Dairy Bureau of two years ago, as to the number of pounds of butter produced per cow, we will find that San Luis Obispo county stands at the foot, with an average production of 110 pounds; Humboldt county shows nearly 200 pounds per year, and I presume it ranges in this valley somewhere between 165 and 175 pounds. Notice the difference between 110 pounds and 200 pounds. If the 110 pound cow doesn't do any more than to pay for her board, the 200 pound cow gives at least a fair profit. The difference is not due entirely, however, to the difference in breed, or to the difference in locality, but the people of Humboldt county have paid more attention to dairying than the people of any other section of the State, and their cows, while probably better on the average, are better cared for and better fed, and this simply shows what can be done by care and feed.

To illustrate what feed and care will do: While working at the Experiment Station in Minnesota, before coming to California, we took up this question of better care and feed. The average dairy cow in Minnesota was yielding from 155 to 160 pounds. The dairymen said they could do no better than that with the cows; the cow was always the complaint. The station had a number of what would be considered average dairy cows. We didn't go into the herd and pick the best, but picked out what would be considered average Minnesota dairy cows. These cows were kept at the Experiment Station and handled. Shelter was provided for them so that they would be protected from the cold and wet in stormy weather. They were watered and fed regularly, and milked regularly every day at certain fixed hours, and they always found their feed awaiting them at the right time. When pasture got scarce they were provided with green feed, or feed from silos. The result was that the average yield per cow was increased to about 265 pounds per year, practically an increase of 110 pounds per cow over what the average Minnesota dairyman was getting at that time, and the whole increase was entirely due to the better handling and feeding of the cows. It shows what can be done in that direction.

ALCARTRA POLKADOT No. 50798
Owned by Pierce Land and Stock Company. World's Record Cow

Passing to another matter: As I said before, the owner of dairy cattle should know exactly what his cows are doing, and very few in this State do. You ask the average dairyman how much milk his cows are giving, and he will probably tell you that he got a checque from the creamery last month for so much, and you can figure it up from that. You ask him how many cows he is milking, and he will tell you he is milking an average of twenty-five or thirty, or whatever it may be. That probably means that he is milking that many throughout the year, as some of them are going dry and dropping out for other reasons, and he is refilling their places. What he should do is to figure on the total number of cows he has handled throughout the entire year. The creamery could, and should, help the dairymen in this matter, as it is not entirely a question of the weight of the milk supplied, but of test. If you want to know exactly what your cow is doing, you must know something more than the mere quantity of milk she is producing; you should know how much butter fat is in it. The creamery operator could help him by offering to make tests for him, or they could encourage him to get a tester and show him how to run it. The majority of farmers and dairymen do not know anything about the Babcock test, except by name. Once you get a farmer interested in testing his milk and it is not difficult to have him continue it. We test somewhere in the neighborhood of 100 samples a month that are sent in by people who want to know what their cows are doing, although I think some of the farmers send them in to see if the buttermaker is giving them correct tests. If the farmer could thus find out what his cows are doing, he could then cull out those cows that are not paying. It is better to milk ten good cows than twenty if ten of those twenty are not yielding a profit, because the extra ten are only eating up the profits that the others are yielding.

A good deal can be done by breeding up your herd. Select pure bred sires. Get out of the habit of using scrub sires. Get out of the idea that any bull is good as long as he gets the cows with calf. Dairymen, if they are to be successful, must get away from that idea. They should get the best sires that money can buy, or that their means will afford. There might be an interesting controversy started as to whether he should select a Jersey, Holstein, Guernsey or Ayrshire. He should select a breed that has been developed in dairy countries. I believe in straight dairy cattle. I don't believe in dual purpose cattle for the dairyman. Dual purpose cattle may be good in some places, if a man wants them, but for a man whose business is dairying, and dairying alone, I think he should have dairy cattle. The matter of breed can be left largely to his own fancy. If he likes Jersey cattle and thinks that breed particularly good as a dairy breed; if he likes to see them and handle them, it is quite possible he will make more money out of the Jerseys than Holsteins, but on the other hand, if he admires the color and size of the Holstein, he will probably make more money out of Holsteins than Jerseys, as he will give them more and better care. I believe that generally speaking a man can choose the breed he likes best and will make more money out of handling it than if you force some other breed into his hands. I think also that he should give some attention to the locality, as, no doubt, in some places one breed will do better than another. I believe nothing can beat the Holsteins on the reclaimed river lands; these low lands under irrigation all the year around, and on these level lands where you raise lots of alfalfa perhaps the Holstein will take the lead, but where the land is rougher, where the feed may be plentiful, but not so succulent, the Jersey may be better. At Berkeley, where we have eighty acres of hill land, I find it is difficult to keep Holsteins and keep them up, but it is less difficult to keep the Jerseys up, and still less to keep Ayrsbires on such land. When it comes to the choice of a sire, the breeders' associations have done a great deal to aid a man in selecting a good animal by having official tests of many animals—all the big producers—so that the small farmer who wants to buy a bull can get one whose dam has been tested and can often know what the grand dam and great grand dam have done, and if you get an animal with a long list of good ancestors he will be more apt to transmit those qualities. I don't think a man should make it a question of dollars when he comes to buying a sire. He should buy the very best he can get; he can't afford to get a poor one. His herd will be improved enough to soon pay him back for the additional outlay. Happily, in California we have a number of men who are raising large herds of pure bred cattle: Holsteins, Jerseys and Ayrshires, but not many Guernseys so far, and I have often wondered why they have not become more popular. I think it is merely because they are not so well known. I think they would become exceedingly popular if once tried here. If a man has a herd of common cattle and will procure a pure bred sire and breed his cows to him, it is safe to say that the second generation will be better than the first, and he can constantly improve his herd.

I saw some time ago that the average yield of dairy cows in Holland was something over 300 pounds per annum. That is probably double the average yield for the State of California, and nearly double the average yield for the whole United States. They have done that by careful selection of dairy animals for a great many years. Since the introduction of the Babcock test they have tested them regularly.

In my old home, Jersey, the average yield is over 300 pounds; the last report I read gave it as over 330 pounds, but you know dairymen are not apt to underestimate matters of that kind, and I think it is safe to say that the average is something over 300 pounds. With those examples before us it is very evident that we can, by care, by paying attention to breeding and management, improve the yield from our cows very materially.

If you should ask a dairyman in California he would tell you that Minnesota could not compare with California as a dairy country, and he would ridicule the idea that Minnesota dairymen could bring their cows to a better average yield than we have here. It is not entirely a question of climate. I think the dairymen in this State depend entirely too much on their climate. I have seen cows here standing out in the cold rain without any shelter. If you ask the dairyman to take them in and give them some shelter, he will tell you it is all right, that they don't need any shelter, that it is a warm rain and that they don't need shelter here as they do in Minnesota. That is all right, but the rain is cold, and if he would keep careful watch over his cattle and make tests he would find that they fall off when handled in that way. In some sections you find cows plowing up to their knees in mud, not provided with water fit to drink, and it is not possible for an animal to do its best under such conditions. You must not depend too much on the California climate. I am not speaking against the California climate, because I believe it is one of the best you can get, and I am content to remain here; but I think cows in California need protection certain times of the year; protect them from the rain, provide a shed or shelter for them and they will do better. The yield in California should be brought up to 300 pounds, but when you are getting that high you are reaching pretty close to the limit.

It is not so hard to bring it up from 160 to 200: it is much harder to bring it from 200 to 250, and when you get to 300 you are pretty close to the limit, and you should be content when you have reached 265.

The various lines of agricultural education spoken of by Professor Anderson can do a lot to help in this matter. When the agricultural college has farm land of its own so it can keep more cows and experi-

ment and make more tests, we can help the farmer more, and more California boys will be able to come tbere and learn how to obtain the best results.

I believe that if we take hold of these problems and work them out we can greatly increase the average yield of the dairy cow in California, and it will redound to the benefit of the creamery operator and the dairyman.

(In a discussion with Mr. Dore and Mr. Brooks, Prof. Major stated that they got the best results from their dairy cattle by giving them oat straw in addition to alfalfa hay, as the cows seemed to relisb the hay or straw when eating alfalfa; and also stated that they gave the cows from four to eight pounds of either bran and barley, or barley and middlings; that the bran made from the California wheat could be fed with alfalfa; that this mixed feed was given to the cows in two different feeds per day.)

THE JERSEY AS A BUSINESS COW.

In this age of keen competition and of scientific methods in all lines of business, it is becoming more and more imperative that all men keep awake on those questions that more nearly affect their pecuniary interests—in plain words, their bread and butter. The dairyman is no exception to this rule. In fact, probably no business has of late years been more affected by the adoption of scientific methods than that of the dairyman. The old-fashioned, happy-go-lucky ways no longer serve, if the dairying business is to be carried on with profit. One of the first requisites is the selection of the right breed of dairy cattle—the breed that will yield the highest profit on the money invested in the purchase of the animals, in the first place, and in their care and feeding afterward.

A number of breeds of dairy cattle are now urged upon the attention of the dairy farmer with a good deal of persistent clamor, and he may well be somewhat confused in deciding as to their relative merits. Claims of large yields are frequently made, both of butter and milk, backed up by so-called "tests," dubbed "official." The tests upon which many of these claims are based should be scrutinized by the wide-awake dairyman and should not be accepted at their face value without examination. A certain cow of a certain breed may be reported to have produced a large amount of butter in a week. So far so good, but the practical dairyman will ask what she has done during her entire milking period, and how long that period has lasted. Another pertinent question is as to whether any butter was actually made, or is the stated amount merely an estimate or deduction. Many tests claiming to show large butter-yields have gone the rounds of the press in whicb not one ounce of butter was actually made. And then it should be ascertained how thoroughly and accurately the scientific work was performed. Was the Babcock test applied to a sample of the milk of every milking? Was it applied to one sample of milk per month, or to a number of samples? In a word, How thoroughly was the scientific work required to he done in the establishment of any "official" record? If it is a comparative test tbat is in question, it is also well to look into the fact whether or not tbe individuals are worthy representatives of the breeds to which they helong. If the test is for a short period—say seven days—it should he noted how long a time has elapsed since date of last calving; for a cow fed so as to lay on fat before calving will yield an unusually high percentage of fat for the first three weeks of the lactation period. This high yield, not maintained by the cow, is a very misleading indication of her dairy value.

IMP. SULTANNE'S ROSETTE
A Famous Jersey

There is one hreed of dairy cattle which, though now for many years in general use, may not have heen so persistently exploited as some others. We refer to the Jersey. It may he said, in explanation of this, that possibly Jersey breeders think that "good wine needs no hush." Be that as it may, no up-to-date dairyman can ignore the claims of the Jersey breed as profitable dairy cattle. A breed that has been known so long, that has spread so widely throughout the world, and that is found, either pure or crossed, in so many working dairy herds, must necessarily have strong recommendations to public favor. A statement of a few of the known facts in regard to this breed will help to answer this question.

It is known that the Jerseys have heen maintained pure as a distinctive breed for ahout one hundred and fifty years. The significance of this is important. It is a law of nature that the longer a type of animal has been established the more "true to type" it is likely to breed. That is to say, the qualities of Jersey cattle are extremely likely to be transmitted to their progeny, thereby furnishing a reliable basis for the breeder to work upon.

The quality of milk, its percentage of fat and total solids, is the governing factor in rating its value. It is well known that this is so when milk is sold to creameries; but it is becoming more and more important in even the retailing of milk, as communities are awakening to its importance and adopting laws framed to secure an improved milk supply, and as the general public is becoming educated as to what good milk should be, so, if the importance of the quality of the milk he has for sale has not yet been brought home to the "business and bosom" of every dairyman in the country, it soon will be; and the successful men will be the ones wbo are prepared to meet this requirement. In its percentage of butter-fat and of total solids the milk of the Jersey breed stands pre-eminent. Many scientific tests have established the fact that Jersey milk will test from 4 per cent to 7 per cent fat, and occasionally much higher and that a percentage of 5 per cent or more as the average for a herd is not uncommon, and may reasonably be expected. Thus, in the milk of the Jersey cow the fortunate dairyman has a product that will be preferred by the private customer, that will command the largest price at the creamery, and that, if churned at home, will produce the largest proportionate quantity and the highest quality of butter. Scientific tests have also shown that milk which is rich in butter fat has generally a bigh percentage of total solids; so that milk of a quality which is good for butter is likewise good for cheese.

But here another question of the greatest importance comes up for consideration, and tbat is continuance in milk, or the length of the milking period of the cow. Cattle being continual consumers, the breed that comes the nearest to heing continual producers will be the most desirable. Jersey cows are pre-eminent for this quality of being persistent milkers. This habit they have to so marked a degree that many of them milk throughout the entire year. And it is not, after all, what a cow may produce in a week or a month that determines her earning value, but what she produces during the year. This characteristic of the Jersey renders her invaluable to the dairyman who has to furnish a definite quality of butter or milk regularly throughout the year, and enables him to gauge beforehand the capacity of his herd with some degree of accuracy. From 8,000 to 10,000 pounds of milk per year may be expected from a good Jersey cow.

Still another question for the keeper of dairy cows to consider is that of feed. Does the herd respond to the feed they consume in their production of milk? Do they turn their food into the desired product, milk, or put it on their own backs in flesh? Now it is a good rule to go by, in profitable dairying, that when you want milk you should get milk, and not beef. Here again the Jersey cow fills the bill. She is noted for her marked tendency to turn her feed into rich milk, rather than into flesh. It is largely owing to this fact that she is the most economical dairy cow of all.

But the questions may he asked: Is she hardy? Is she desirable for any climate or location? These questions are fully answered by the fact that Jersey cattle have not only preserved their vitality and productiveness in their native island for a century and a half, hut have been largely sold into the interior of the European continent, have heen exported to England, to the United States, Canada, Australia, New Zealand, and to some extent even to Cuha and South America. On the North American Continent they are found everywhere, from Alaska to Mexico and Central America, and from Maine to California. That an animal sought after in all these varying climates, from the Arctic regions to the tropics, is endowed with sufficient stamina to meet all reasonable demands, goes without saying.

These are some of the considerations to he weighed by the intelligent dairy farmer, and they are all amply supported by tbe facts available, and by the experience of many practical dairymen. The attention of the keepers of dairy cattle is therefore called to them—

"For fac's are chiels that winna ding,
An' daurna be disputed." * * * *

HOW PRIZE HEREFORDS WERE FED.

When Daniel W. Black of Lyndon, Ohio, won the first prize at the Chicago Fat Stock show in 1901 everybody wanted to know how he fed tbose grand Herefords, and he was asked to tell the story. His reply was that he found out what his calves wanted and then gave them all they wanted of it. Last August I visited Mr. Black, wanting to make some photographs of the yearlings and two-year-olds he was preparing for the World's Fair exhibit in November and the International in December, and also to learn what it is that Hereford calves like so well that they win a first one year and a special another year for D. W. Black because he gives them all they want of it.

Mr. Black talks freely about his methods of bandling calves. The Hereford, of course, is his choice. He admits that selection has very much to do with the success he has bad. A heifer's calf is dropped a little later than the average, it may have more Hereford blood in it and it retains the baby form well. The type must be growthy. Herefords will not stand forcing all their lives. The two-year-old is as satisfactory as the yearling for the showring when not pushed till the last summer.

Follow nature, says Mr. Black. Good pasture, good water, open shed feeding, liberty of action for tbe calf—these are fundamental. The first winter the ration is shelled corn and bran, clover hay and fodder. One pound of the grain ration to each one hundred pounds weight is the rule this first winter, increasing the grain as weight increases. The summer feed is grass only—good clover and timothy and blue grass—lots of good grass and water. Shock corn is the feed of the second winter. The corn furnishes all the fuel needed in open air living. No close housing and no forced feeding for these Herefords during their second winter.

Now we have them weighing 1000 or 1100 pounds in May, and there are remaining only six or seven months for their ripening. Gradually they are brought to full feed. Up to this time in their lives the conditions have been kept natural, normal. They can stand the forcing and are quick to respond to it. The pasture is good—the more they will eat the better, says Mr. Black. The grain ration is placed in a self-feeder. Forty bushels corn and cob finely ground, 500 pounds bran and 500 pounds oil meal form the mixture. This quantity will last the thirty head of two-year-olds about six days.

An early variety of corn is planted thickly, and it is ready for feeding when pastures become less attractive to the cattle in late summer. Three times a day the steers go to the self-feeders, eating slowly what they want of the ground grain. It is surprising how they change around, said Mr. Black, eating more grain ration for a day or two, and then more shock corn for a day. Their taste varies and they must have what they want. Indeed these grand two-year-old babies get so they do not know that they want anything until they are housed up. After the grain ration is eaten in the morning they could lie down till noon if left to themselves, but when moved around to the corn they are ready for it, and then for water—all they want of whatever they like.

I asked Mr. Black where he stored any empty molasses barrels that might accumulate on the premises. Haven't a single one, he replied. Do not use anything of the sort in finishing my cattle. The oil meal and bran prevents lumpiness, and I vary the amount of the oil meal according to the condition of the steers. The yearlings for the show ring get similar treatment, having the shelled corn and hran, with hay and fodder, the first winter, and then the forced feeding during the summer and fall similar to that given to the two-year-olds. The carload that is going to St. Louis will average about 1200 pounds if the estimate in August proves correct.

While I have tried to give an idea of Mr. Black's method of handling the Texas calves the secret of this feeder's success is something he cannot transfer to another, no matter how willing be might be. It is first his peculiar skill in selection. He goes where the best may be found, and then he knows the best when he sees it. He gets the right calves to begin with. But that is not all. Most men witb the same calves would never be in sight of a prize at a fat stock show. Mr. Black understands Hereford nature. He supplies natural conditions, but they are wonderfully good natural conditions. Just enough food for rapid, smooth development, husbanding nerve force and power to digest. Then in the last six months full feeding with a variety of palatable foods.

Mr. Black is a successful man. He owns a fine farm of seven bundred acres, the most of it bought by his own earnings, and he is yet a young man, counting age as gray-haired men do. Hogs made good money for him a few years ago, and a pure bred Hereford herd has brought him some good prices. In 1902 he sold his yearling Texas grades with weights averaging ahove 1100 pounds for Christmas beef to Philadelphia hutchers at 8 cents a pound on home scale. He likes a risk, with profits in sight, and has a trick of winning. Last fall Mr. Black brought twenty-two cars of calves from Texas, nineteen of which were Herefords. These calves went to Ohio feeders in various sections of the State. They weighed 300 to 400 pounds when brought in, and cost feeders $18 to $20. Two of the remaining carloads were Polled Angus and the other was Shorthorn.—National Stockman.

P. H. McEvoy of Menlo Park is offering two handsome Prince Airlie stallions for sale—Milbrae (trotting record 2:16½) and Menlo Boy 3741. For particulars see advertisement. *tf

The racing men ought to try the Hart Apartments this winter; 3 and 4 rooms, private baths, telephone, steam heat, first class. 750 Ellis street. *tf

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Avenues to Nature.

A man who is desirous of making much of outdoor life must, if getting wholesome enjoyment each day, strive not neglect to make Nature's acquaintance, and cultivate her as much as possible. Herein will be found a genuine satisfaction not to be had anywhere else. Nature is an open book, in which he who will may read, full of wonders, and entertainment and recreation, much of amusement, and instruction; tales of adventure and excitement, enterprise and daring—all going to make up the round of wild life about us.

There are so many ways of drawing near to Nature, to turn the pages of this great book, that to endeavor to enumerate them all would be, perhaps well nigh impossible. With gun and dog, rod and creel, or with the camera, one is brought close to Nature in but special ways and not as if a visit to the shrine were unimpeded.

For the student of Nature or the novice at outing there are to be found especially direct and easy ways of gaining access to her society and an insight into its daily functions. The first is through the kindly auspices of a dead tree. Select some grim monarch of past ages, standing with its withered limbs outstretched, preferably on the crest of a high hill or

A LIVE OAK NEAR HEALDSBURG

knoll surrounded by woods. Take up your stand beneath it, reclining if you so desire, at your leisure. Here you will not have to search for wild life, for it will parade itself before you constantly, from dawn to sunset. All the feathered songsters and denizens of the air delight in nothing more than a moment's pause, in their flight, on the dead limb of such a tree. A convenient perch, held out against the sky at all times, for their benefit and accommodation. Such a halting station in their journeying through the woods is visited by all, from the tiny, timid songsters—the garrulous bluejay, the raucous crow, to the soaring hawk, a black speck in the sky, finally dropping down to rest on such a spot. A day's visit at a dead tree is a good deal like a trip to a menagerie, if not better.

A second way of easily approaching Nature is by frequenting the vicinity of a woodland spring. Such a spot is the rendezvous of all kinds of wild life, as well as man, and will well repay one, for its presence is enjoyed by one as well as everything. Cool brakes and wild tangles of vine grow about it. It helps to freshen the air in its immediate locality on hot days, and a sparkling draught of its pure water is always invigorating. Birds and animals come to it, and linger about it, and live within easy reach of it. Visit a spring often in summer as well as autumn. Watch to see what will take place. First of all comes the mother quail with her brood. She knows she will find water and food in this spot and she wishes to impart this important information to her offspring. After her, perhaps, will come the cock, no creature appreciates spring water better than does he. Note how often you have been startled by the whirr of a quail's wings when passing a woodland spring. Thrushes, sparrows, catbirds, jays, warblers and a host of other birds are also lovers of springs. Here is a favorable place to find and observe them.

The great reception hall of Nature, the gathering and homing ground, the family hearthside of all living things, where all of them may be found "at home" to visitors, is the natural water-way, the lagoon and the creek and the bayou adjacent to the marshes. Such a spot usually teems with life. It is the thickly populated section of wild nature. It fosters the busy hum and bustle of wild life just as the great city does that of human life. It is the "metropolitan district" of wild life. Even men, for some reason or other, seem to cling to the vicinity of water, why, perhaps would be hard to tell. How often has one heard the remark "I would not care to live away from the water's edge. It would seem as though I was lost, unable to get anywhere." Only a fancy, and yet may not animals or birds fancy it? But probably the great attraction with them is the more abundant food afforded by such a spot.

It is the custom of a well known scientist and great student of nature to spend a month in camp each year on the bank of a well wooded stream but seldom visited by man. His object is to widen his acquaintance with animate things, for he says that nowhere else can he accomplish his object so readily as in just such a place.

"It's rich ground for me," he comments invariably when speaking of it, "the nights as well as the days are given to all sorts of odd and curious cries and noises, and it almost seems as though Nature never took a wink of sleep or rest in such a place. There's always something going on."

Similarly an old logging or wood road is also an artery running straight into the very heart life of Nature. Ramble leisurely along it with eyes and ears open, and you will be sure to be kept interested constantly. It is certainly a fact which cannot be denied that a great many of the animals of the woods resort to abandoned ways and paths for their convenience in traveling. You have, for instance, but to observe the evidence which the snow reveals in winter to become convinced of it. The trails left in their wanderings tell of their habit of traveling in man's track if the opportunity offers. And why should they not?

Many more approaches to Nature and means of gaining a closer information of her will occur to the thoughtful observer as he comes and goes in his rambles. Keep them in mind. Anything that encourages men to be abroad out of doors, that leads them away to association with Nature, is good and to be commended. Remember the road to the woods, and often travel it.

Success in Still Hunting.

"One cannot possess too much knowledge of the game he seeks," said a veteran deer hunter. "In fact, many hunters return empty-handed because they were not sufficiently acquainted with the habits of the quarry they sought.

"Old hunters prefer to go against the wind when seeking game alone. To do this it is sometimes necessary to make a wide detour to have the wind on the right side.

"Wild animals depend upon their sense of smell to avoid many of their enemies, more so than they do on their sight and hearing. Deer will often stop and watch a man who is standing perfectly still, and then, as they do not detect any scent and find nothing to alarm them, return to their feeding or drinking.

"Ofttimes when two are hunting, one will take a station where game is expected to pass, while the other hunter will go around and come down the wind noiselessly, thus driving the game in the direction of the man at the station, who is often enabled in this manner to get a successful shot.

"The occasion may present itself when the hunter has to go across the wind to approach the game from the right direction. In that event he should keep a close watch for everything that may be passing around him, particularly in the direction of the wind. He may detect a buck making away down the wind, alarmed by his scent; but he is not likely to so observe unless he is careful, the game on the windward side of him.

"It is always vital to go through the woods or country hunted over, silently, and to do this will most likely require time and caution. At the same time one must study the surroundings very carefully.

"Many hunters walk past deer that are standing in plain view and whose presence they might have discovered had they been observant. Deer have many tricks, one of which is to let a hunter pass quietly when they know by his actions that they have not been discovered. For the deer to move under these circumstances would be to betray their presence. Some of the finest shots I have ever known were expert hunters—who knew all about deer, but did not

"THE VICINITY OF A WOODLAND SPRING"

let the deer know it.

"In certain localities it is well to hunt on a windy, snowy day, if it is not too stormy, for then deer hide up and seek shelter. The noise in the tree tops destroys the effect of the noise made by the hunter to a great extent.

"I know of some successful still hunters who station themselves in a spot commanding a wide view, and although they wear moccasins or other light footgear and work silently, they will break a twig with the fingers while half concealed beside a large tree or in the brush, and then watch around to detect any game that would start up at the noise.

"Stalking from tree to tree when the hunter is traveling through open timber is an Indian trick, and a good one, too.

When traveling a long distance through the woods in quest of deer, it is a good plan to keep to the tops of the ridges when the leaves are off whether there is snow on the ground or not, for the uplands afford views of the lowlands, and you may thus be able to see a deer in a canyon or gully.

"When crossing from one ridge to another, do so across the wind if you can, and above all, take time. You may even be walking directly upon game.

"'Get your bullet to the bones, young man,' is the

AN OLD LOGGING ROAD—IN MENDOCINO COUNTY

A LAKE COUNTY SPIKE BUCK

advice of more than one old hunter. It is a very good precaution against losing your meat, and it is also well to know how a deer will act after having received a wound of a certain character.

"There are four places where most large animals may be struck to cause them to drop instantly. One is when a bullet goes near the center of the brain. Another is where the spinal cord is severed. A third is when the heart is penetrated at the instant the breath has been exhaled. The fourth is when the muscles under the spine have been severed crosswise by a bullet at the small of the back. Bullets placed thus are most effective.

"A buck shot through the heart when his lungs are full, or at the moment he is inhaling, may run from thirty rods to half a mile, bleeding freely all the time, before he finally falls.

"A deer shot through the brain will leap into the air the same as one shot through the heart when the lungs are empty.

"Finning or creasing, which is accomplished by clipping one of the vertebral spurs that rise from the top of the spine in the region of the shoulders, will drop an animal, but should it happen to fall into water the water will instantly revive it, so it is always advisable to have a second shot ready.

"Another bit of advice from an old hunter is, 'Don't hurry too much to get a wounded deer. Sometimes the shot will rupture a blood vessel and the animal will bleed internally. While it will not leave a trail it will not travel far before lying down, never to get up again. An animal shot through the intestines or through the paunch will usually lie down a short distance away and soon become too weak to move again.'

"A buck shot through the liver, almost invariably, if not much hurt otherwise, will kick with his hind legs just as straight skyward as he can. He will bleed to death inwardly in time, but he is apt to leave a trail if he is followed closely.

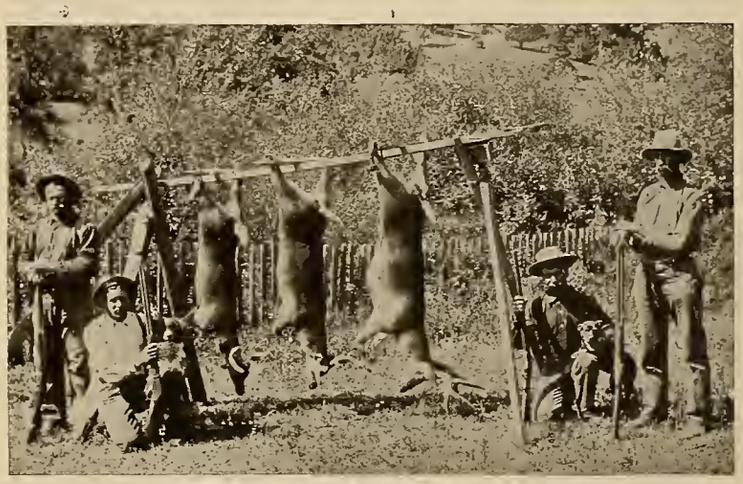
"The neck is a favorite target with many hunters. When aimed at the neck near the body, a bullet can hardly touch it low down in front without producing death. The shoulder line, however, is the best target.

"There are certain fundamental rules for deer shooting—beginners' rules—which may be quickly stated.

"Deer feed generally early in the morning and late in the afternoon, mostly in open places. Between ten o'clock in the morning and four in the afternoon, say, they are in covert, lying down, as a rule. They should never be hunted down wind. Keep off of leaves and twigs if they are dry. Take long strides and put the foot down softly.

"Look cautiously over the top of a hill or ridge before showing the body. Let the eye explore the tops of dead fallen trees or such other cover as may be in the route before drawing near to them. The edges of any deer track worth following will not have crumbled or fallen in; if made on ground they will be damp to the forefinger. If nearing a lake be cautious, and when a view is had of the opening, run the eye thoroughly around the shoreline; look near at hand with a double closeness.

"Any deer jumped, unless it has decided to leave the country, may be counted upon to circle and come back near to the starting point inside of an hour or two. Therefore, in returning by the same route in the afternoon be watchful of places where deer were in the morning. Never—and this rule should be printed in type a foot long—never shoot at anything unless its identity is thoroughly established. Rigid observation of this rule would have saved a hundred homicides in the United States within the past five years."



TROPHIES OF A DAY'S HUNT NEAR WILLETTS

THE GOOSE HONKS HIGH.

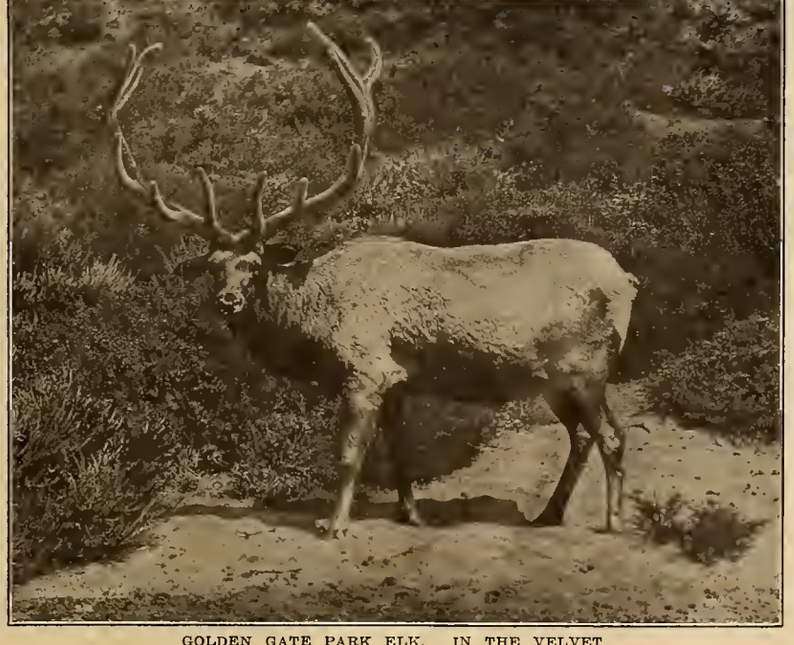
Mr. Charles Burton, a farmer living near Brenham, Texas, lost a fine flock of fifteen geese recently as the result of the "call of the wild to them." One day last winter while he was duck hunting on the San Felipe, a bunch of wild geese settled down near his blind. He fired and brought down a fine big gander, which was crippled in one wing. With the aid of his Retriever the disabled bird was captured and subsequently taken home by the hunter, for the gander was not badly injured. The wounded wing was doctored and the captive goose soon got well again. One wing tip was amputated, thus preventing his flying away. The gander was then placed with the farmer's flock of tame geese, with which new companions he took up readily.

The influence of the wild gander in his new domicile was noticeable in the spring for the domestic geese had numerous goslings to look after. Among the young geese were a number that plainly showed the wild cross in their make-up, but in habits they had all of the characteristics of the tame goose.

It was not until some weeks ago that any marked difference between the actions of the half breeds and the domestic birds was noticed. A certain nervousness seemed to come over the half breeds when the first chill in the fall air from the north reached them. They continued to be perfectly tame, however, and were always on hand at feeding time, morning and evening. They had shown little disposition to use their wings, although the few short flights they had essayed about the place showed that they had inherited the native strength of wing of their hardy sire from the distant northern region.

The first "norther" of the season struck that part of the country on schedule time. As usual it was the harbinger of migrant wild ducks and geese. The farmer out feeding his geese heard the distant melodious call of wild geese. Scanning the sky, he discerned, far to the northeast, a large flock of feathered visitors flying in his direction.

The vibrant notes of the oncoming birds came nearer and nearer. He turned to his flock of half breeds and was surprised to see that they had stopped eating and were listening intently to the, to them, strange and unknown call that came down with mysterious portent from above. Suddenly the half breeds began to answer, responding in clear and eager tones to the piping chorus in the sky. Then, with sudden and concerted impulse, the young geese raised their wings and soared away on swift pinions direct to the passing flock of their migrating congeners, forming into position on one wing of the irregularly V-shaped line behind the trumpeting leader as naturally as could be. The last the astonished Texan saw of his "geeses" they were in full flight headed for the Gulf of Mexico. He will probably never see them again—and who could blame them?



GOLDEN GATE PARK ELK. IN THE VELVET

AN UNUSUAL LIMIT BAG.

A remarkable shoot was that of Mr. Joseph Ross, a well-known Antioch sportsman, recently when he bagged the limit on gadwall or gray ducks as they are often called.

While this variety of wild duck is not by any means a rare bird and are frequently shot by hunters in the bay county marshes and in the up-river tule districts limit bags for one day's shoot, however, are the exception. Across the river from Antioch, Sherman island has always been a favorite resort of the gadwall. The writer has on several hunting trips observed them in fairly plentiful numbers in the ponds of Sherman island. At this season of the year they are in excellent condition. Gadwalls are classed as a table bird with the mallard and redhead, and indeed in habit they much resemble the former, although perhaps hearing a still nearer affinity to the widgeon. They stool well to mallard decoys, and their note is very similar to that of the mallard. They rarely dive, except when wounded, and then they cling to the roots at the bottom for a long time.

The methods of shooting the gadwall are identical with those employed in hunting mallards or sprig. The color of the gadwall is black and white, or whitish, the plumage being barred or half ringed with these two colors, middle wing coverts chestnut, greater coverts black, speculum white, feet orange yellow, bill bluish black, weight about two pounds.

AN ELEGANT EDITION.

The Christmas number of the Shooting Times and British Sportsman is, as usual, replete with interesting matter for angler and shooter. The stories, there are many of them, are seasonable and good, contributed by some of the most practical sportsmen writers of the day. The illustrations, with which the annual abounds, are nearly all the efforts of pro[illegible] artists.

A WOODENHEAD PIPEDREAM.

"Say, Pal! watch that Sprig 'get it in the neck,'" [illegible] the Canvasback decoy to his side partner, a wooden-headed stool that stands for a Mallard.

At the crack of the gun, as if by accident, the wind [illegible] the two together and with a few merry chugs [illegible] each other's sides they relapsed into that sweet unconsciousness that is supposed to be made for a flock of decoys only.

"Dear me," sobbed the Mallard. "It is bad enough to be a decoy and to be condemned to a life of eternal servitude and unfeelingly be a party to the murder of our flesh, feathers and blood friends, but what a terrible thing it must be to be a dumphool like the Sprig gazabe that just fell. Lord! 'Ole' Bill didn't do a thing to him. Well, to be a real living duck evidently is pleasant, but when it comes to taking a contract to carry the biggest part of an ounce and a quarter of chilled lead [illegible] My word! but it must hurt to have one's skin perforated that way. As for me, I don't [illegible] what hurt it. Well now, what 'rube' said that 'Where ignorance is bliss, 'tis folly to be wise' or blissful, what was it?"

"No, you bloomin' idjit,' gleeted the Can. "It means we ought to be glad we're livin'—I mean that we are dead—no, no, I'm off again—how the —— can we be glad we're dead when we have never been living? Such [illegible] this is too strong for me. Perhaps Ole Bill Richards over there in his blind can tell us, the liar."

"He's [illegible] kicks." He ain't never been dead."

"Well then, old Hardmouth' Swain, here he comes [illegible] He's wise to lots o' things."

"That may be, I know one thing that, he's been shot."

"So have I."

"Yes I'm on. Ha, ha! That was when Johnny Butler shot [illegible] in the Black Jack pond. The Dook [illegible] that day. You tried [illegible] bin' about [illegible] through [illegible]."

"And you still wasn't as long after the 'pickin's' was in the mornin'. But when 'Stump' Wy[illegible] in the blind! Holy smoke! Say, he didn't do a thing to 'Punk' Johnson's new Sprig decoys."

(A silence, during which a bunch of canvasback swung in to the President's blind and after the double report there issued from his immediate locality a flood of warm words that are not in the Bible nor yet in a family dictionary.)

"Isn't it awful how the President swears when they get away from him? And he's no slouch with a gun, either," sighed the 'Can.'

"Yes indeed, it's terrible. Say, did you say 'Hardmouth' was shot?"

"Well not exactly. It was like this. He packed one of the Dook's bottles with him in his blind, and when they took him out, I heard 'Punk' say that he was about half shot, and he knows what's what. But I didn't see any blood."

"Say, Mallard, what makes your flesh and blood brothers go in the shallow water over there to feed? I notice that all of my tribe strike out for deep water."

"Well, the only thing I know is that the Mallards like to 'puddle' and eat 'bait' and seeds, and once in a while they nail a toothsome snail or frog or somethin' like that. At least that's what I heard one of them say as they were flyin' over, but you can never tell nothin' about them ducks."

"How?"

"Why, you remember that high-toned Spooney drake with a green head that tried so hard to look like a Mallard and who lorded it over a lot of Teal, just as Newman came up and busted him with the second barrel?"

"Oh, yes, and say, he didn't need to put on so many frills. That's only skin deep. I heard some Widgeons remark last week, that over near the Collinsville slaughter-house he was eating—but then I promised I wouldn't tell, but you can guess."

"Yes, indeed. Gee! I wish somebody would hold my nose."

"Say, Mallard, what is Tom Walsh shootin' today—his Greener or one of his high-grade American guns?"

"Rats! You don't seem to know anything. Don't you recollect when he went out he told Nickels that he had his Dutch gun."

"Gosh! I'd hate to be shot with a Dutch gun."

"Why?"

"'Cause it would be more patriotic to be killed by an American gun than it would be to take a tumble limp and lifeless in the pond, a victim to a foreign gun."

"That's all right about the patriotic racket. But what I can't 'get through my nut' is how they manage to get the American ammunition in a foreign gun. Seems to me it would swell with indignation."

"So it does—when it gets wet, some of it anyway, but not the Selby factory loads or the Clabrough-

"BUSTED HIM WITH THE SECOND BARREL"

Golcher hand loads, or the C. P. W. brands loaded in U. M. C. or Winchester shells."

"Jumpin' Jehosaphat, Mallard! did you see that double the President just made?"

"Yes, Blackjacks. Just look at him. He's takin' a drink on it, too. Jes' like 'im."

"Well, Mallard, I guess 'Ole Bill' has got his limit; I see he's beginning to pick up. Gee-clie, how it blows and rains. If I had feathers I believe I would be cold. Some advantages after all in havin' a wooden overcoat."

THE SPRIG

"Yet there be times when this shy, wary fowl,
Seeing the set decoys, will venture round."

A QUESTION OF AUTHORITY.

The general law giving Supervisors the power to shorten an open season it is claimed does not also confer authority to cut down the limit allowable under the State game law, 50 ducks or doves and 25 quail to the individual bag for one day. It is claimed that when such an ordinance is passed it is in conflict with the State law and in accordance with eminent legal opinion—the county ordinance is not worthy of consideration.

IN A TULE-SPLITTER

WESTMINSTER KENNEL CLUB

The Westminster Kennel Club's twenty-ninth annual dog show will be held in Madison Square Garden, New York, on Monday, Tuesday, Wednesday and Thursday, February 13, 14, 15 and 16, 1905.

Entries will close on Wednesday, January 25th. Applications for premium lists and all inquiries must be made to Mr. James Mortimer, Superintendent, Room 1005 Townsend Building, 1123 Broadway, New York.

ANOTHER COAST PUPPY.

It is claimed by Eastern critics that Wandee Kennels have a wire-haired puppy by W. Coastguard out of W. Manilla that will beat them all on the Eastern circuit this spring. Stanley Lomas will handle the coming crack at the W. K. C. show in February.

CALIFORNIA WOOD DUCK

Pacific Coast Field Trials' All-Age Entries.

Nominations for the Pacific Coast All-Age Stake to he run near Bakersfield next month closed on the 15th inst. with an entry of eighteen English Setters and six Pointers. These dogs represent the hest blood lines of both breeds extant in the United States today. Among these candidates for field trial prizes are dogs bred from winning crosses on both sides for many generations hack—not only in this country but in England.

Kilgarif was the sensational winner of the Derhy Stake last January. Cuba Jr., ls a Pointer that not only won a Derby but was placed afterwards in an All-Age Stake. Before Cuha Jr. made his appearance in the Coast trials he was placed in his Derhy form seven times in Eastern trials. Sombra and Uncle Jimmie were both placed at the Pacific Northwest trials near Seattle last October. Policy Girl is also a winning field trial performer. Oak Knoll and Belle Fontaine are two recent arrivals from the East from which much is expected when they are cast off in the coming trials.

Henry L Betten, of this city, a well known and popular Setter enthusiast, will judge all of the events at this meeting. Reports from the field trial grounds are to the effect that cover conditions are very favorable and that birds are plentiful. The section of territory over which the dogs will he run during the trials has been patrolled since August and the quail protected from molestation.

At a recant meeting of the club a rule was adopted to the effect that any dog having won a first place in

CLARENCE A. HAIGHT

DuPont, Laflin & Rand, California Powder Works—Manager Sporting Powder Department.

any previous recognized field trial All-Age would be harred from competition in that event at the Pacific Coast trials. Premier honors in this event were deemed sufficient for one dog when won, thus giving other breeders and new degs the opportunity to evade competing with dogs that might reasonahly be expected to have a walk-over. This is a rule essentinlly favorable to and encouraging for the hreeder, and also eliminates the possibility of a single memher monopollzing the stake—unless he is successful in breeding and entering a winning dog each year, a desideratum all field trial men devoutely wish for. This new rule will, it is helieved, result in an entry of dogs for the Champion Stake of at least half a dozen contestants for the cluh championship purse.

The entries in the All-Age Stake are as follows:

ENGLISH SETTERS.

C. D. Carman's (Selhy, Cal.) hlack and white dog Wad (Cato-Maggie F.) whelped August 2, 1901. J. M. Golobeck, Crockett, Cal., breeder.

J. M. Gnloheck's (Crockett, Cal.) black, white and tan dog Cato Jr, same breeding.

W. W. Van Arsdale's (San Francisco) hlack, white and tan dog Count's Mark (Ch. Count Gladstone IV-Peach Mark) whelped March 4, 1899. Owner, hreeder.

Same owner's black, white and tan dog McCloud Boy (Tony Boy-Sadie Hopkins) whelped Dec. 25, 1900. Owner, breeder.

Same owner's hlack, white and tan dog Harry H. (Why Not-Sue) whelped Feb. 17, 1901. P. Lorillard, N. Y., hreeder.

Same owner's black, white and tan dog California Bell Boy (Tony Boy-Gypsy Queen) whelped July —, 1900. P. Lorillard, breeder.

Same owner's black, white and tan hitch Keepsake (California Bell Boy-Peach Blossom) whelped August 22, 1902. Owner, hreeder.

Same owner's hlack and tan dog Avalon, same breeding.

Same owner's liver and white dog Jam M. (Colonel R-Spot's Girl) whelped March 29, 1901. Geo. E. Gray, Appleton, Minn., breeder.

J. E. Terry's (Sacramento) hlack, white and tan dog Kilgarlf (Orion-Mary Lou) whelped July 28, 1901. Owner, hreeder.

Same owner's whlte, hlack and tan hitch Countess Lou (Count's Mark-Mary Lou) whelped Septemher 4, 1902. Owner, breeder.

Same owner's white, black and tan bitch Moxy Danstone (Count Danstone-Gath's Moxy) whelped April 23, 1902. W. J. Baughn, Ridgeville, Ind., breeder.

H. W. Keller's (Santa Monica) orange and white bitch Somhra (Llewellin's Drake-Shadow) whelped August 13, 1902. W. W. Van Arsdale, breeder.

James Keyser's (Napa) white and lemon bitch Nita (Cavalier-Loveknot) whelped August 29, 1901. P. D. Linville, San Francisco, breeder.

Rose & Christensen's white, hlack and tan bitch Belle Fontaine (Count Whitestone-Gracie Gladstone) whelped May 1902. Frank Jague, Humboldt, Iowa, hreeder.

J. H. Schumacher's (Los Angeles) white, black and tan hitch Valita (California Bell Boy-Rod's Lark) whelped April 20, 1902. W. W. Van Arsdale, hreeder.

J. W. Considine's (Seattle) black, white and tan hitch Policy Girl (Dave Earl-Top's Queen).

J. A. Peebles (Seattle) white and orange ticked dog Uncle Jimmie Whitestone (Count Whithstone-Sport's May Belle).

POINTERS.

C. H. Shaw's (San Francisco) liver and white dog Oak Knull (Tick Boy-Tick's Maid) whelped May 25, 1902. Geo. Crocker, N. Y., breeder.

Wm. J. Morris' (Los Angeles) white, liver and ticked bitch Faith (Silver Dick-Tipaway) whelped Novemher 19, 1902. J. P. Grawl, Waverly, Iowa, hreeder.

Stockdale Kennels' (Bakorsfield) liver and white dog Cuha Jr. whelped March 13, 1900 (Ch Cuba of Kenwood-Florida). Owner, breeder.

Same owner's white and hlack bitch Midget (Cuba's Zep-Jingo's Bagpipe) whelped November 1, 1901. Owner, hreeder.

Same owner's liver and white dog Glenwoon (Ch Cuha of Kenwood-Petronella) whelped January 22, 1903. Owner, breeder.

Same owner's liver, white and tan bitch Ivywood. Same breeding.

Record Makers.

St. Thomas, Ont., Jack Hartly of St. Thomas, Ont., won the ten hlrd shoot killing ten straight, and on the following oay won high average in the Canadian Championship handicap, killing twenty birds straight, winning first money, the Canadian Championship and the gold watch. There were twenty-two competitors in the event composed of the star shots of Canada, and Hartly made the only clean score, shooting 3¼ drams of "Du Pont" Smokeless.

Salina, Kansas, December 7th to 8th, Fred Gilbert, first general average, 389 out of 400, shooting "Du Pont." Second general average, W. R. Crosby, 388 out of 400, shooting "E. C." Chas. Spencer, third general average, 386 out of 400, shooting "Du Pont."

Glen Rock, Pa, Decemher 8th, C. T. Grove, Pa., first amateur average, shooting "Du Pont," and tied with Hood Waters, shooting "Infallihle," for first general average, 127 out af 150. Max Miller of Felton, Pa., second amateur average, 114 out of 150, shooting Du Pont. A. M. Seitz, of Glen Rock, Pa, third amateur average, 94 out of 150, shooting "Infallible."

"Infallihle" is waterproof and coldproof. Theideal powder for ducks and geese.

A Well Known Sporting Goods House.

One of the oldest estahlishments on the Coast, patronized by sportsmen is that conducted hy the Shreve & Barher Company. Mr. George W. Shreve entered the gun and sporting goods husiness at St. Louis in 1866. In 1870 he left there and was engaged in the same line in New York City until 1878 when he arrived in San Francisco and started the present business that is conducted in two stores—one at 739 Market street, the other at 521 Kearny street.

The Shreve & Barher Company were incorporated in 1896. Mr. W. J. Shreve, who joined his brother soon after the latter arrived in this city, is President of this company. Mr. George B. Barher, who was associated for many years with C. D. Ladd, is the Secretary-Treasurer of the concern.

The husiness conducted so long and successfully hy Mr. Shreve and his associates is the result of years of experience and a wide knowledge of the many details that are necessary to make popular a sporting goods store.

A Consistent Performer.

That Remington guns are favorites with trap shooters is evidenced by the great number used all over this country and the British provinces. As a field and duck hunting gun it is not excelled hy any other gun made. The Consolation Handicap (G. A. H.) and National Gun Gluh Championship and high average at the Ohio State shoot were all won with Remington guns this year and are only a few of the many wins made hy a popular make of shotgun.

A Standard Load.

Coast sportsmen, for a quarter of a century, have used and tested the merits of the Selhy factory loads. For uniformity and regularity of pattern this ammunition has a reputation that has made it a great favorite for upland and marsh shooting. Selby factory loaded shells areloaded with Du pont, "E. C.," Schultze, Hazard, Shotgun Rifleite, Ballistile and L. & R., "Infallihle" and can he had at any dealers.

An Important Coast Agency.

One of the largest and most important Coast hranch agencies for the leading manufacturers in the United States of shotguns, pistols, air rifles, athletic and field sports' sundries, smokeless powders and sportsmen's sundries is the Phil B Bekeart Company of this city. This firm also carries a line of automohile tires, etc., and "hike" supplies second to none.

Mr. Phil B. Bekeart, the president of the corporation is not only popular with 'the trade" hut is a cluhman and sportsman of wide and influential acquaintance.

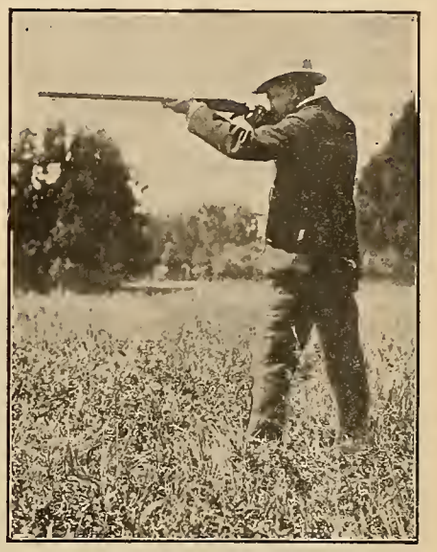
He Thinks Much of It.

A letter received this month by the Ithaca Gun Company, Ithaca, N. Y., from Edward O. Lyman, First Sergeant, Troop E, 3rd Cavalry, Boise Barracks, Idaho, states:

"Having had some correspondence with you in regard to Ithaca hammerless 12 gauge guns, I feel that a word from me might not he amiss. Shortly after receiving your letter I visited my agents, Coffin, Clinton & Co., and from them purchased an Ithaca gun, No. 1 Special, 12 gauge 28 in., left barrel full chnke, right harrel modified, weight 7 pounds 6 ounces, and I must say that for its size and weight, it is a very fine little gun. I have been out a number of times, and I always know when I pull the trigger whether or not I have the game. I always get it if I hold right, and with the years of shooting I have had I know at the instant of pulling the triggers whether I have held just right or not The first shot was at a full grown jack rabbit, crossing at one side from left to right and he dropped stone dead; measured distance 53 yards, using 1¼ oz. No. 8 chilled shot. After that I went for quail and I do not boast hut give credit to the gun, that I brought down 85% of the quail fired at. They have been very plentiful in the buttoms here. I am very well pleased with the guu, and have refused more than the price I paid for it from others who have seen the gun work."

Where You Can Get the Best.

The emporium conducted by Clabrough, Golcher and Co., is known to the sportsmen of the Pacific Coast as a reliahle house where anything and everything in the line of goods used hy devotee of gun and



W. J. GOLCHER

President Clabrough, Golcher & Co.

rod, the athlete in every branch of indoor and gymnasium work or outdoor and field sports, the outing enthusiast or summer camper, can with dispatch and satisfaction have an order filled or make a purchase.

Among the many high class specialties of this firm may he mentioned the Clahrough gun, the hest selected stock of fishing rods and tackle to be found in the United States and a line of cutlery and sundries that are unsurpassed.

Their hand loaded shells supplied to trap shooting experts and lovers of upland and marsh shooting have a reputation second to none.

An Ideal Outing Country.

The California Northwestern Railway runs through a section of this State—Marin, Sonoma, Mendocino and Lake counties, that has justly made the road known as the "Picturesque Route."

The Marin, Santa Rosa, Russian river, Ukiah, Sonoma, Redwood, Walker and Willits valleys abound with attractive camping places. Through these heautiful districts flow some of the best trout streams to be found in the State; the devotee of upland shooting can find also many kinds of feathered game. The road and its stage connections will enable the hunter of deer and other large game to reach their haunts quicker and more comfortahly than can be said of the facilities in this respect offered the sportsmen at any metropolis in this country.

A Popular Sportsman.

Mr. Clarence A. Haight is prohably one of the best known and most popular sportsman connected with the trade, on the Pacific Coast today. Mr. Haight for years past was the Coast Manager for the E. I. Du Pont de Nemours Company. Recent consolidation business changes by the great powder concern have resulted in Mr. Haight taking charge of the combined sporting powder department—Du Pont, Laflin and Rand, and California Powder Works smokeless hrands.

Mr. Haight's success in husiness is due to a thorough knowledge of the powder trade, and intimate acquaintance with Coast people and conditions and a genial personality that has won him a host of personal friends and a strong business following.

Recent Winchester Wins.

Winchester shells won high honors at the World's Fair tournament, held in St Louis, November 1, 2 and 3. W. R. Crosby won high professional average for the three days, and C. G Spencer won second professional average. All three amateur averages were won by shooters using Winchester shells; Harlow Spencer finished first, J. W. Garrett and C. M. Powers tied for second, and J. O'Neil won third. Mr. Crosby, in addition to winning the professional average, made a new world's record while shooting in the World's Fair Handicap event on the second day. He killed 49 live birds out of 50 from the 34-yard mark, something which has never before been done.

At the Lakeville, Ill., shoot, November 2, Winchester shells won high professional averages and first high amateur average. F. H. Lord, C. Keck and H. W. Veltmeyer finished in the order named in the professional class, and J. R. Graham took first place in the amateur class.

A Standard American Gun.

The "Old Reliable" is not a gun cheap in quality. Parker Bros., aim to make and do make, as the testimony of thousands of lovers of the gun will show, the best possible production of the gunsmith's art. The factory at Meriden, Conn., is one of the best equipped establishments of its kind in the world. The address of Parker Bros. builders of the "Old Reliable" is 30 Cherry street, Meriden, Conn., they will cheerfully give full information to any one writing for pointers about a good shotgun.

A Few More U. M. C. Winnings.

Colonel J. T. Anthony has been adding a few more top notch scores to his credit before the close of the season. At Charlotte, N. C., October 24, he broke 96-100, and at Sumpter, S. C., October 27, he won the high average, breaking 136-150. U. M. C. "Arrow" shells were used at both places.

At Taylorville, Ill., October 26 and 27, Frank Riehl made the remarkable score of 340-350-97 1-5. This easily won the average; as usual, U. M. C. "Arrow" shells.

Billy Heer journeyed down to Blackwell, Okla., after a short rest at home and shot a fine exhibition. The score was 457-470-97 1-5 per cent, and his shells were U. M. C. "Nitro Club."

H. E. SKINNER
With Shreve & Barber Co., San Francisco

Smith Guns Shoot Well.

That the L. C. Smith guns are right when bought and ready when needed may be inferred from a letter from Jack Fanning to the Hunter Arms Co., in which the expert says:

"It gives me great pleasure to tell something of the history of my old gun, No. 37,538. I purchased this gun on Dec. 29, 1894, of R. Liddle & Co., of San Francisco, and have shot it continuously ever since at the trap and in the field. I only laid it aside on Jan. 1, 1904, when you sent me my new gun I am now using.

I have kept a reliable record of the number of shots that have been fired in this gun It is conservative to say that it has been shot 200,000 times, and I do not believe it would be stretching it any to say that I have used it 225,000 times. I am delighted to state that it has stood like a rock; never has been shaky in any way whatever and apparently is just as tight today as the first day I used it."

A Great Home Industry.

The California Powder Works have had a big demand for the "C. P. W. brands." Their smokeless shotgun shells are loaded with any brand of smokeless powder desired. The loading is guaranteed and orders may be placed with dealers for any kind of powder the sportsman favors. "Pattern," "Perfection" and "Invincible" shells loaded by the California Powder Works are good for trap and game shooting.

PACING 2:11 1-4 **RITA H.** TROTTING 2:14 1-4

FOR SALE.

RITA H. is by McKinney 2:11 1-4, dam Smut by Prompter.

She is a dark brown mare, stands nearly 16 hands high and weighs in racing trim 1050 lbs. In 1903 she started eight times on the Washington and Oregon Circuit, won her first seven starts and only lost four heats during the entire circuit, getting a pacing record of 2:11¼. In 1904 she was converted to the trotting gait and proved herself a consistent performer, winning most of her races in fast time and getting a trotting record of 2:14¼. She is six years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Her owner has driven her in 2:12½ (pacing) in the Los Angeles Driving Club races, she having won all but one in which she started. This mare is all right and there is not a thing the matter with her, but my business demands are such that I cannot afford to devote any time to racing. For prices and further particulars address

BYRON ERKENBRECHER,
301 Currier Bldg, Los Angeles, Cal,

FOR SALE.

Bay Filly, 3 yrs old, by Temescal (son of Palo Alto and Telie, dam of four, by Gen. Benton); dam Stub by Directed [see above].

Bay Filly, 2 yrs old, by Guy McKinney, dam Stub.

Brown Colt, 1 yr old, by Guy McKinney, dam Stub.

Bay Colt, weanling, by Charles Derby 2:20, dam Stub.

DAISY WHIPPLE, br. m , 13 yrs old, sired by Steve Whipple 2:12; dam by McCracken's Golddust; 2d dam by Williamson's Belmont.

Chestnut Gelding, 2 yrs old, by Directed; dam Daisy Whipple.

Bay Colt, weanling, by Directed; dam Daisy Whipple.

CADDIE WHIPPLE, b. m., 11 yrs old, sired by Steve Whipple 2:12; dam Caddie R. by Elect; 2d dam Young Flora Hill (dam of Needham's Whipple (2) 2:27¾) by Chieftain 721, &c.

Brown Filly, 2 yrs old, by Directed; dam Caddie Whipple.

Brown Filly, weanling, by Directed; dam Caddie Whipple.

Chestnut Filly, 3 yrs old, by Directed; dam Bessie Whipple by Steve Whipple 2:12; 2d dam by McCracken's Golddust; 3d dam by Williamson's Belmont.

The three two-year-olds are entered in the Kentucky Futurity, $21,000, for foals of 1902.

The yearling colt by Guy McKinney is entered in the Kentucky Futurity, $22,000; the Hartford Futurity, $15,000; the Horse-Review Stake, $10,000, and the American Horse Breeder Stake, $10,000, for foals of 1903—$5?,000 worth of stakes in all.

The weanling colt by Charles Derby-Stub is entered in the American Horse Breeder Stake, $10,000, for foals of 1904.

The weanling colt by Directed-Daisy Whipple is entered in the Horse Review Stake, $10,000, for foals of 1904.

All good size, fine individuals. Lack of time to devote to the horses is the reason for selling. For further particulars call on or address

H B. NEEDHAM,
R. F. D. No. 2, Modesto, Cal.

STALLIONS FOR SALE.

Dictator Wilkes, son of the great Dictator and Manola by Geo Wilkes, second dam the great broodmare Lizzie Brinker by Drennon. DICTATOR WILKES is a dark bay horse with size, style and excellent conformation. He stands 15 3 and weighs 1100. Was never worked for speed except a little as a two-year-old, when he was very promising. He is the sire of Monroe S. 2:13¼ and other very fast trotters and pacers.

Temescal, son of Palo Alto 2:08¾ and Telie (dam of Truman 2:12 and two others in the list) by Gen. Benton. TEMESCAL is a handsome chestnut, stands 16 2, weighs 1250 pounds has an excellent disposition and size and style. But one of his get has ever been worked, a filly out of a Dexter Prince mare, and she shows much speed and great promise.

For prices and further particulars address

Two Prince Airlie Stallions For Sale.

MILBRAE 2:16 1-2 by Prince Airlie 28045 by Guy Wilkes 2:15¼, sire of Fred Kohl 2:07¾, Hulda 2:08½, Seymour Wilkes 2:08½; 1st dam Fearless by Fallis 4781 (rec 2:23), sire of John R. Baldwin 2:17¼, Fallacy 2:17½, Falrose 2:19, and dam of Janice 2:08¼; 2d dam Jean Perault by Signal 3327. MILBRAE has been in training just one year, getting a trotting record of 2:16½ (trial 2:13) with first half in 1:05, a quarter in :31¼. This is no measure of his speed. He is a seal brown, 16 hands, weighs 1200 pounds, 6 years old.

MENLO BOY 37401 by Prince Airlie 28045 by Guy Wilkes 2:15¼; 1st dam Signal by Del Sur 1098, grandam Lady Signal by Signal 3327. With very little work be has trotted in 2:29¼, quarters in :35. He is a brown with white pasterns, 16.1 hands, weighs about 1170, and 5 years old.

For further information apply to

P. H. McEVOY, Menlo Park, Cal

STALLION FOR SALE.

Sidney Boy 22991. One of the handsomest sons of Sidney. Stands 16 hands and weighs 1150 pounds In color he is a dark bay or brown, and in every respect a splendid individual. On his dam's side he carries the blood of David Hill, a strain that is much sought after by Eastern horsemen. He is a sure foal-getter and sires size, style, speed and quality. He has a good disposition and a lady can drive him with perfect safety. His colts are here to show for themselves. For particulars address

J. W. STUFFLEBEEM, Tulare, Cal.

Registered Stallion For Sale.

PANAMINT (Reg. No. 9688)

Bay horse foaled in 1896. Bred by Burns & Waterhouse. Sire Fellowcharm, Son of Longfellow and Trinket by imp. Great Tom; 1st dam imp. Paloma (7 winners) by The Drummer; 2d dam Canary (5 winners) by Lapidist; 3d dam Rosalie (famous Australian matron) by Peter Wilkins; 4th dam imp. Rosemary by Stockwell; 5th dam Rosalie by Surplice and on to 21st dam, Layton Barb. Mare.

Panamint is by the excellent Longfellow horse, Fellowcharm sire of many winners in California, out of imp. Paloma (dam of Palomacito, Don Clarencio, Yellow Tail, Armitage, Examiner, Miss Rowena and Palomita). Burns & Waterhouse gave $7500 for imp. Paloma at the Hearst sale in 1894, and she has thrown high class winners with marked regularity, proving worth many times the amount paid for her.

Panamint has won many good races during his turf career and when his racing days are over he should make an excellent sire. Fellowcharm, his sire, was a good winner, and by Longfellow, winner of fourteen out of sixteen races, his progeny winning over $1,400,000. Panamint has two crosses of Stookwell, and one of his brother, Rataplan, received through the dam imp. Paloma. Besides he has the blood of the Flying Dutchman, the unbeaten Bay Middleton and many crosses of Touchstone and imp Glencoe through both sire and dam.

Panamint had the honor to defeat such rare good performers as Southern Girl, Wooster Boy, Horton, Pupil, Afamada, Storm King, Sevoy, Pat Morrissey and Hungarian, showing a lot of class In 1899 Panamint started fifteen times, winning five, finishing second three times, third twice. In 1900 he started sixteen times, winning eight, finishing second twice and third once. Address

J. C. KAIDERA, Centreville, Cal.

FOR THREE-YEAR-OLDS AND UPWARD

THE MONTGOMERY HANDICAP—Estimated value $5500. Silver cup or plate to winner. Handicap $3000 added. (Entrance free.) For 1905. A handicap sweepstakes for three-year-olds and upward. $50 each, half forfeit, or $10 if declared. $3000 added, of which $400 to second, and $250 to third, the fourth to save stake. In addition to the stake, the winner will receive a valuable silver cup or plate, donated by the Club. Weights to be announced before 9 a. m., February 1st and declarations to be made on or before February 15, 1905. All declarations void unless accompanied by the money. The winner of a race, after the weights are announced, of the value of $1000 to the winner, or two races of any value, (selling purse race excepted), 5 lbs penalty; such penalty not to exceed scale weight if handicapped at less; those weighted at scale or more than scale weight by the handicapper will not be subject to a penalty. The scale to be Western Jockey Club Scale. This race to be run the opening day. **One mile and one-sixteenth.**

THE PEABODY HOTEL HANDICAP. Estimated value $3000. Subscribed to by Peabody Hotel. Handicap. $1500 added and the silver cup or plate (Entrance free.) For 1905. A handicap sweepstakes for three-year-olds and upward, $50 each, half forfeit, or $10 if declared on or before April 3rd. All declarations void unless accompanied by the money. $1500 added, of which $250 to second, and $150 to third, fourth to save stake. In addition COL. R. B. SNOWDEN will add a silver cup or plate, to go to the winner. Weights to be announced two days before the race. **One mile and one-eighth.**

THE TENNESSEE BREWING CO. STAKES—Estimated value $2500. SUBSCRIBED TO BY TENNESSEE BREWING CO. Selling stakes. $1000 added. (Entrance $10.) For 1905. A selling sweepstake for three-year-olds and upward. $10 to accompany nomination, and $50 additional to start. $1000 added, of which $200 to second, and $100 to third, fourth to save starting money. The winner to be sold at auction for $3500 if for less; 3 lbs. allowed for each $500 to $1500; then 1 lb. for each $100 less to $500. Starters and selling price to be named through the entry-box by the usual time of closing for this day's racing, and those so named are liable for starting fee. **Seven furlongs.**

THE COTTON STEEPLECHASE STAKES—Steeplechase. **Estimated value $2700.** $1500 added. (Entrance Free.) For 1905. A steeplechase handicap sweepstakes for three-year-olds and upward. $50 each, half forfeit, or $10 if declared on or before April 3rd. All declarations void unless accompanied by the money. $1500 added, of which $250 to second and $150 to third, the fourth to save stake. Weights to be announced two days before the race. Four or more horses of entirely different interest to start, or the race may be declared off. Starters to be named through the entry-box at usual time of closing the day before the race, and those named are liable for starting fee. **About two miles.**

SPECIAL NOTICE.—No entry will be received for any of these stakes except upon this condition: That all disputes, claims and objections arising out of the racing, or with respect to the interpretations of the conditions of any race, shall be decided by a majority of the Executive Committee present, or those whom they may appoint, and their decisions upon all points shall be final.

The Club also reserves the right to refuse the entries of any person, or the transfer of any entry, and without notice.

THIS RACE COURSE (MONTGOMERY PARK) is, without a doubt, one of the best in America to winter and train the thoroughbred, furnishing first class and most comfortable quarters for both man and horse. On this track the majority of the good two-year-olds of the West each season are developed. Highball, winner of the American Derby, and Colonial Girl, winner of the World's Fair Handicap, both wintered at this track.

Entry Blanks or any information on application will be promptly furnished by the Secretary.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

The Accepted Standard Veterinary Remedy

We Guarantee that one tablespoonful of CAUSTIC BALSAM will produce more actual results than a whole bottle of any liniment or spavin cure mixture ever made.

We Guarantee that one tablespoonful of CAUSTIC BALSAM will produce more actual results than a whole bottle of any liniment or spavin cure mixture ever made.

Always Reliable Sure in Results

PREPARED exclusively by J. E. Gombault, ex-Veterinary Surgeon to the French Government Stud. Impossible to produce any scar or blemish. The safest and best blister ever used. Takes the place of all liniments for mild or severe actions. Removes all bunches or blemishes from horses or cattle.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

KEEP IT CONSTANTLY ON HAND FOR MAN AND BEAST.

MAINE PRAIRIE, Minn., Jan. 28, 1903.
The Lawrence-Williams Co., Cleveland, O.:
I have used GOMBAULT'S CAUSTIC BALSAM for spavins, curbs, ringbones, shoe boils, sprains and sore throat. It is fine for rheumatism, lumbago and stiff joints, neuralgia and all pain. It is fine for man and beast. Keep it constantly on hand; can not get along without it.—WM. LOUDON.

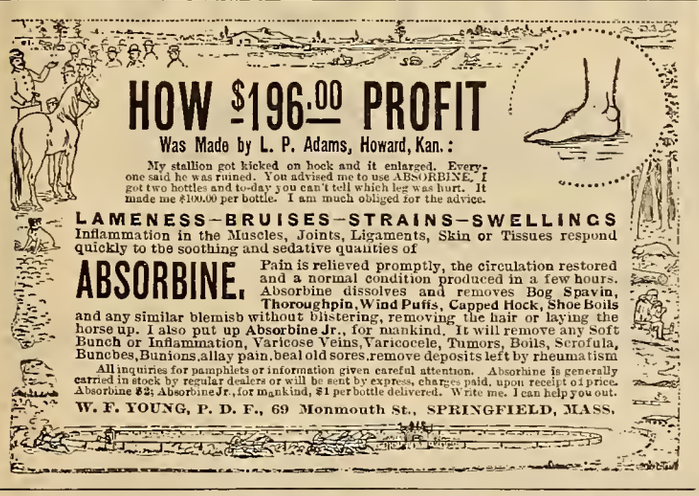
BUDD DOBLE says: "I like it better than any sulky I ever sat in, and it is formed on the best mechanical ideas.



HOW $196.00 PROFIT

Was Made by L. P. Adams, Howard, Kan.:

My stallion got kicked on hock and it enlarged. Everyone said he was ruined. You advised me to use ABSORBINE. I got two bottles and to-day you can't tell which leg was hurt. It made me $100.00 per bottle. I am much obliged for the advice.

LAMENESS—BRUISES—STRAINS—SWELLINGS

Inflammation in the Muscles, Joints, Ligaments, Skin or Tissues respond quickly to the soothing and sedative quantities of

ABSORBINE. Pain is relieved promptly, the circulation restored and a normal condition produced in a few hours. Absorbine dissolves and removes Bog Spavin, Thoroughpin, Wind Puffs, Capped Hock, Shoe Boils and any similar blemish without blistering, removing the hair or laying the horse up. I also put up Absorbine Jr., for mankind. It will remove any Soft Bunch or Inflammation, Varicose Veins, Varicocele, Tumors, Boils, Scrofula, Bunches, Bunions, allay pain, heal old sores, remove deposits left by rheumatism

All inquiries for pamphlets or information given careful attention. Absorbine is generally carried in stock by regular dealers or will be sent by express, charges paid, upon receipt of price. Absorbine $2; Absorbine Jr., for mankind, $1 per bottle delivered. Write me. I can help you out.

W. F. YOUNG, P. D. F., 69 Monmouth St., SPRINGFIELD, MASS.

STATE AGRICULTURAL SOCIETY

OCCIDENT STAKE OF 1907

TROTTING STAKE FOR FOALS OF 1904

To be Trotted at the California State Fair of 1907. Entries to Close January 1, 1905, with L. R. MILLER, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which $10 must accompany nomination; $15 to be paid January 1, 1906; $25 to be paid January 1, 1907, and $50 thirty days before the race. The Occident Cup, of the value of $400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1907 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1905.

L. R. MILLER, Secretary. B. F. RUSH, President.

Pedigrees Tabulated and type written ready for framing Write for prices. BREEDER AND SPORTSMAN, 36 Geary Street, San Francisco, Cal.

"SAVE-THE-HORSE"

Registered Trade Mark

SPAVIN CURE

$5.00 per bottle Written guarantee with every bottle, as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Positively and Permanently Cures

Bone and Bog Spavin, Ringbone (except low ringbone), Curb, Thoroughpin, Splint, Capped Hock, Shoe Boil, Wind Puff, broken down, sprained, injured and ruptured Tendons. The fire iron is uncertain, and invariably only aggravates disease or injury; blistering is less effective—both necessitate laying horse up. Mercurial and poisonous compounds produce irreparable injury. 'Save-the Horse" eliminates all these factors. Cures without scar, blemish or loss of hair. Horse can be worked as usual. Copy of guarantee, valuable booklet on diseases and injuries affecting horses, and copies of personal letters from bankers, noted trainers, manufacturers and business men of prominence the world over, telling of the wonderful cures it made for them, sent upon application. We advise frankly of possibility of remedy in any specific case. Give explicit particulars; state age, location of swellings, lameness, and the way the horse holds and carries the leg. $5.00 per bottle at all druggists and dealers, or express paid.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPE SORES and SADDLE GALLS there is non superior.

The horse CAN BE WORKED AS USUAL.

For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.

It is very adhesive and easily applied to a watery as well as a dry sore.

Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1900 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.

It is a quick and sure cure for those troublesome skin cracks under the fe ock which injure and often lay up race horses.

All Trainers Should Have It in Their Stables

PRICE:—3 OZ. BOX, 25c.; 1 LB. BOX, $1.00.

STAKES TO BE RUN IN 1907. ENTRIES TO CLOSE TUESDAY, JANUARY 3, 1905

THE PRODUCE STAKES OF 1907. GUARANTEED CASH VALUE, $30,000

THE PRODUCE STAKES OF THE GUARANTEED CASH VALUE OF $30,000, to close and name on Tuesday, January 3, 1905, for the produce of mares covered in 1904, the stakes to be run in 1907, for then two-year-olds, as two events, one race for Colts and Geldings and one race for Fillies. The value of the race to be apportioned in proportion to the sex of the eligible foals dropped, i. e., if 60 per cent of the eligible produce are Colts, then 60 per cent of the money goes to the Colt and Gelding race, and 40 per cent to the Filly race, or vice versa.

By subscription of $250 each, half forfeit, or only $10 if declared by November 1, 1906, or $50 if declared by May 15, 1907.

The guaranteed gross value of the two events to be $30,000, of which $1500 to the second horse and $750 to the third horse in each event.

The nominator of the winner of each event to receive $1000, the nominator of the second horse in each event to receive $500, and the nominator of the third horse in each event to receive $250, out of the stakes.

Winners of a race of the value of $5000 to carry 3 lbs extra, of two races of $5000 or one of $10,000 5 lbs extra, of two races of $10,000 or one of $15,000 8 lbs. extra. Horses not having won $2000, allowed 3 lbs: horses not having won $1500, allowed 5 lbs.; horses not having won $1000, allowed 7 lbs.; maidens allowed 10 lbs.

The produce of horses or mares that have not produced a winner previous to January 1, 1905, allowed 3 lbs.; of both 5 lbs. This breeding allowance must be claimed before the time of the closing of this stake and is not lost by subsequent winnings.

Non-winning allowance and breeding allowance cumulative.

The original nominator will be released from all liability attaching to the engagement by filing with the Racing Secretary on or before November 1, 1906, an accepted transfer of the entry accompanied with all forfeits to that date. SIX FURLONGS.

The Rules of Racing adopted by The Jockey Club govern all races run under the auspices of THE BRIGHTON BEACH RACING ASSOCIATION.

WM. A. ENGEMAN, President.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET.

IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS AND BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.

It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.

It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—A FOOT WHICH WILL STAND WORK on race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CERTAIN CURE for THRUSH and SCRATCHES

We Guarantee That it Will Do What We Claim and Will Refund Money if it Fails.

PRICES:—Quarts, $1 00; Half-Gallon, $1.75; Gallon, $3 0 ; 2½-Gallon, $5 50; Five-Gallon, $10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.

Don't fail to read "ad." giving information concerning Campbell's Iodoform Gall Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

STATE AGRICULTURAL SOCIETY

OCCIDENT STAKE OF 1907

TROTTING STAKE FOR FOALS OF 1904

To be Trotted at the California State Fair of 1907. Entries to Close January 1, 1905, with L. R. MILLER, Secretary, at the Office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which $10 must accompany nomination; $15 to be paid January 1, 1906; $25 to be paid January 1, 1907, and $50 thirty days before the race. The Occident Cup, of the value of $400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern.

Nominators are not held for the full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

The stake of 1907 should receive a large entry, and be very valuable. Every breeder should enter in it.

Remember the Date of Closing is January 1, 1905.

L. R. MILLER, Secretary. B. F. RUSH, President.

SAVE-THE-HORSE

Registered Trade Mark

SPAVIN CURE

$5.00 per bottle. Written guarantee with every bottle, as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Positively and Permanently Cures

Bone and Bog Spavin, Ringbone (except low ringbone), Curb, Thoroughpin, Splint, Capped Hock, Shoe Boil, Wind Puff, broken down, sprained, injured and ruptured Tendons. The fire iron is uncertain, and invariably only aggravates disease or injury; blistering is less effective—both necessitate laying horse up. Mercurial and poisonous compounds produce irreparable injury. "Save-the Horse" eliminates all these factors. Cures without scar, blemish or loss of hair. Horse can be worked as usual. Copy of guarantee, valuable booklet on diseases and injuries affecting horses, and copies of personal letters from bankers, noted trainers, manufacturers and business men of prominence the world over, telling of the wonderful cures it made for them, sent upon application. We advise frankly of possibility of remedy in any specific case. Give explicit particulars; state age, location of swellings, lameness, and the way the horse holds and carries the leg. $5 00 per bottle at all druggists and dealers, or express paid. San Francisco, Saturday, December 31, 1904.

THERE IS WORK for the harness horse breeders and owners to do during the oext two months while the Califoroia Legislature is in session, and the sooner they meet aod agree upon some plan of actioo, the easier the work will he and the more certain it will accomplish tbe purpose sought. There is scarcely a possibility of the old district fair appropriation being made hy the Legislature as has heen done in former years, and no probability of the Governor approving it if it is passed. An effort is to he made to rearrange the State into a few districts which is not a had idea, provided it is done in a manner that will he for the hest ioterests of the producers and tax-payers in the districts as made, instead of for the benefit of the professional politicians and taxeaters residing therein. There is a great deal in commoo between the horse and cattle breeders, dairymen, farmers, and fruit growers, and they should act together in matters pertaining to the organization of agricultural fair districts that oo injustice may be done either class. So few uoderstand the value of fairs and the proper management of them, that unless the people most interested organize and give the legislators the benefit of their knowledge and some idea of their wants, a hill may he passed that will make places at good salaries for a few political workers, but be of very little actual benefit to anyone else. No intelligent horse breeder or owner desires the State to appropriate any money for horse racing, but as the races are the chief attraction at all fairs and the part of the program that draws tbe crowd and brings in the larger part of the gate receipts, horsemen do expect that a track where speed contests may be held shall he provided on every fair ground. Racing is tho chief sport of the American people aod is as clean as any when properly conducted. A fair without races would be like the play of Hamlet with the melancholy Dane omitted from the cast. Fairs can be made great sources of profit to the people aod great advertisers of our State's products but they must be established on the proper hasis and managed in the proper manner. It is therefore necessary that some unity of action may be had among those most interested in tbem which will aid good and prevent had legislation this winter. Much talk has been indulged in hut very little work done so far hy the harness horse breeders and owners who helieve tbat their interests should receive attention, and unless they organize and begin work soon they may be left out of the calculations and plans of those who have tbe fair hills in charge and when too late will find that their owo apathy and inaction have been the cause of this condition of things.

A SAD CHRISTMAS came to Mr. Monroe Salishury this year, his beloved wife for thirty years having died suddenly at their apartments at the Palace Hotel in this city oo the Wedoesday previous Mrs. Salisbury was alone at the time, her nurse having gone with a message to tbe room of a friend. When she returned ber patient was unconscious and died three minutes later. Medical aid was summoned immediately, but was unavailing as death had resulted from a sudden failure of the heart. Mr. Salisbury who was at the Butler ranch at Pleasanton, her two daughters, Mrs. Alexander Keyes and Mrs. T. Danforth Boardman, and her son, Sydney Salisbury, were at once notified of the death, and hastened to her apartments from tbeir homes. Mrs. Salisbury's death was entirely unexpected although she had been in ill health for a year, the result of a stroke of paralysis. She was the acknowledged leader of society in San Francisco, and a remarkable woman in many respects. She was the daughter of the late Tod Robinson of Sacramento, and was married to Mr. Saiisbury in 1874. Mr. Salisbury has acquaintances and friends that are legion in America and in fact all over the world (as he has heen a man of affairs all his life) and there is not one hut will hear of his great loss with the deepest regret and sincerely sympathize with him in his great affliction.

ENTRIES for the hig stakes offered hy the Coney Island Jockey Club close January 3d. See the advertisoment oo page 14.

Pony Racing To-Day at San Mateo.

The entry list received for the races to he held at C. W. Clark's private track at San Mateo to-day hy the California Polo aod Pony Racing Association is of quite high class and very large, aod the outlook is for the hest racing ever held since the association was organized. The selection of Mr. Robert Leighton as permanent Secretary of the orgaoization was a wise one as Mr Leightou not only has a tborough knowledge of the sport, hut he is an enthusiast and a tireless worker.

A number of ponies new to California will be started in the races to-day, among them Silver Queen an Idaho product owned by Mr. C. W. Clark, Peggy Williams a Denver pony by the champion Silver Dick, and several others.

Messrs. J. Downey Harvey, Henry T. Scott and Francis T. Underhill will act as Stewards of the meeting, and Richard Havey will wield the starters flag, bis work in that line at previous meetings having established him in great favor with tbe memhers. Tbe entries for to-day's races are as follows:

First race, three-sixteenths of a mile—C. W. Clark's Silver Queen, Rudolph Spreckels' Don, W. E. Pedley's Queen Rucker. L C. Williams' Fannie Anderson. W. S. Hohart's Silver Dick, Rudolph Spreckels' Mystery, C. W. Clark's Cakewalk, L. C. Williams' Peggy Williams, D W. Doonelly's Mary Aileen.

Three-eighths of a mile—W. E. Pedley's Carlotta, W. S. Hohart's Marigold, C. W.Clark's Silver Queen, Rudolph Spreckels'Lady Gay, C. W.Clark's Chanate, F. G. Grace's Maudie Swift, Rudolph Spreckels' Hopeful.

Quarter of a mile—W E Pedley's Queen Rucker, C W Clark's Cakewalk, Dudolph Spreckels' Becky, W S Hohart's Marigold, F J Carolan's Princess Flavia, Rudolph Spreckels' Althomer, L C Williams' Peggy Williams, L C Williams' Fanny Anderson, W S Hobart's Silver Dick, C W Clark's Silver Queeo.

Champion stakes, six furlongs—Rudclph Spreckels' Lotrix, C W Clark's Moroing Glory, F J Carolan's Fusillade, C W Clark's Bas Blancs, Rudolph Spreckels' Honoma.

Half a mile—Rudolph Spreckels' Brown Peggy, Rudolph Spreckels Don, C W Clark's Cbanate, Rudolph Spreckels' Cheerful, F J Grace's Maudie Swift, W E Pedley's Carlotta, C W Clarks Bas Blancs.

Pleased With His Purchase.

HOTEL DRIARD, VICTORIA, B. C,
December 19, 1904.

F. W. KELLEY, PROP. BREEDER AND SPORTSMAN:

Dear Sir—Through an advertisement in the BREEDER AND SPORTSMAN I purchased from Thomas Bonner of San Francisco the black three-year-old mare, Sophie McKinney hy McKinney, dam Bessie Wilkes dam of Trilhy Direct 2:08¾. Sophie McKinney was shipped from San Francisco on the 16th inst. via steamer Umatilla to Victoria, B C. where she arrived Sunday night in first class shape without a scratch. Inasmuch as this mare was hought through an advertisement in your paper and bought hy telegraph and relying upon your statement in a recent issue of your paper and also relying upon Thos. Bonner as heing a reliahle business man I think I owe it to you to say that the deal is entirely satisfactory.

The mare is as good as you said and as good as Mr. Bonner wired she was. She was well shipped and I wish Mr. Bonner every success and the same to the BREEDER AND SPORTSMAN and a Merry Christmas.

Yours very truly,
C. A. HARRISON.

Death of Conifer.

A Santa Cruz correspondent writes us saying that the death of the stallion Conifer has been reported. Conifer was a hay horse, foaled 1889, and was bred by Hancock Johnson of Los Angeles. He is the sire of five standard performers including the fast stallion Bonnie Russell 2:10¼ that trotted to his record oo the Grand Circuit this year. Conifer was sired by Lord Russell, an own hrotber to Maud S. 2:08¾, and his dam was the producing mare Carlotta (dam of Queen Lil 2:18) by Nutwood 600, second dam Kitty Clyde hy Chieftan 721. Those of Conifer's get that have takeo records are Bonnie Russell 2:10¼, Johnnie Trouble 2:22¼, and the pacers Anna J. 2:16¾, Cloe 2:17½, and Lady K. 2:21¾.

Death of a Former Californian.

The death on December 10th of James C. Howland at Middletown, New York, is thus referred to by Cbas. T. Harris, a correspondent of the *Horse Review*:

Mr. Howland was horn sixty-nine years ago at Quaker Springs, N. Y., and in the early seventies removed to Stony Ford, Orange county, where he was for several years steward for the late Charles Backman. After leaving Mr. Backman's employ, Mr. Howland kept a hotel near Stony Ford stud, and afterward removed to Chester, where he kept the Howland House for some years. Banker Messenger 496 was the first son of Hambletonian 10 that became his property, the horse passing to the final ownership of L. E. Roudebush, Blooming Valley, Pa. His next stallion purchase was Polonius 4090, Mr. Howland buying a half interest in the colt from David R. Feagles, and subsequeotly became the sole owner of this son of Hambletonian. He was an extensive horse buyer and seller, but did not race his horses. Among the most prominent old-time track performers owned hy him was Lady Banker 2:23.

In the early part of 1859 Mr. Howland went to California by way of the isthmus, having a replevin in his pocket for the grey stallion Stockhrige Chief, Jr., 672 sire of Abe Edgington 2:23¾. The horse was sold hy Mr. Bishop, of Troy, N. Y, to a Mr. Vihbard under an agreement to which Mr. Howland was witness. Vihhard took the stallion to California, but did not keep his agreement, and Mr. Bishop employed Mr. Howland to recover the horse or get a settlement. On Mr. Howland's arrival in California Vibbard moved the stallion from place to place and in followiog him about tbe expense allowance was exhausted. To get again in funds Mr. Howland eotered the employ of the late Mr. Wm. M. Williamson, taking charge of the stallion Belmont and other stock oo the Williamson ranche. Some months after, Vihhard sold Stockbridge Chief, Jr., to Cbas. Hosmer, of San Francisco, but no money passed in tbe transaction. Mr. Howlaod waited on Hosmer and after presenting the case, gave Hosmer a hill of sale and received $4000 in gold for the stallion.

Mr. Howland was one of the principal movers in the erecting of the monument over the grave of Hambletonian 10

Anent Mamie R.

Stories about "the intelligent compositor" are prevalent among newspaper writers in all countries, and oothing excites keener sarcasm than the efforts of the typesetters to improve upon or correct the copy of tbe editor. Mr. C. C. Crippen, one of the correspondents of the BREEDER AND SPORTSMAN, now has the opportunity to tell a story ahout the "intelligeot editor." In a letter to this paper he related the story of the campaign of the three-year-old filly Mamie R. on the California Circuit this year, and stated that she had started three times, which was correct. The proof reached the editor, however, who had just heen compiling an alphahetical list of the winners of the year, and, according to his "dope," Mamie R. had started four times; so be "corrected" Mr. Crippen's copy and added a few words about her fourth start. Now it so happened that there were two mares named Mamie R. out this year and the editor had failed to notice this fact. Mamie R., the tbree-year-old by Son of Oro Wilkes, only started tbree times, as stated hy Mr. Crippen. The other Mamie R. is a full sister to the great trotter John A. McKerron 2:04½, being hy Nutwood Wilkes out of the great hroodmare Ingar hy Director.

Christmas Race at Santa Cruz.

One of the BREEDER'S occasiooal correspondeots at Santa Cruz writes. Our new race track propositioo has heen hung up, but that did not prevent Santa Cruz enjoying a genuine horse race, Mr. Pryor's black mare by Mestoe defeating Mr. Caplatski's sorrel mare by Nutwood Wilkes in two straight heats. The sorrel mare was outclassed. Branciforte Avenue, our speedway, was crowded—fully 500 horse lovers on foot, and as many more in huggies, showiog conclusively that Santa Crnz people would patronize a track. The race was for $25 a side. Dr. Ferguson drove the winner. A. N.

Reductions on High Class Vehicles.

O'Brien & Sons announce that on account of alterations to building, made necessary by recent fire, they have reduced prices on their eotire stock of carriages, buggies, harness, whips, robes, etc., and among the goods sacrificed are to be found a fine line of Toomey sulkies and carts. The new model Toomey low seat sulky, has become the most popular track sulky used.

The raciog men ought to try the Hart Apartmeots this winter; 3 and 4 rooms, private baths, telephone, steam heat, first class. 750 Ellis street.

Views of the New Secretary.

Albert Lindley, who was recently elected to the position of Secretary of the State Agricultural Society declares that as long as he fills that office he will not allow the racetrack bookmakers to control his acts. In an interview with a Sacramento *Bee* reporter Mr. Lindley said, in discussing the subject of the State Fair:

"Before my election as Secretary of the State Board of Agriculture and before I could secure a majority of the Board of Directors I had to convince the memhers of the Board that I would not he controlled hy the bookmaking element or let running races he the controlling and leading feature of our State Fairs. This I could easily do, as I have for years had an idea that a State Fair in California can he conducted on the same hroad plan pursued hy Northern and Eastern States—a Fair where the principal aim would he to encourage the man who produces anything fine—whether it he a fine hog, a fine orange or a rare flower—to place his product on exhibition and if he had the very finest he would be amply rewarded both in money and prizes, the first to cover the expense of making his exhibit, the second to keep, that he may always show with pride the proof that at one State Fair, at least, he had the higgest, the prettiest or the finest there was in the great State of that one particular product.

"When it is known that any man who has the best of anything, produced in any county of California, will be ahle at our State Fairs to win much money and more honors there will be a rivalry among different counties that will hring to our Fair many exhibits that will he witnessed hy thousands where we have heretofore had hut hundreds.

"In holding these views I do not wish to be understood to be opposed to racing in the least, but believe to the contrary that such a plan properly carried out will hring people in crowds from all sections of the State, and we may be sure that if we have the crowds there will he no trouhle ahout racing being more profitable to the hreeder and owner of fine horses than ever before.

"Should it be deemed essential that hetting be allowed at our State Fair (and it must he granted that thousands of taxpayers like to have a little money wagered on each race they witness) I have heen instructed hy my superiors, the Board of Directors, that I will he held responsible hy them for any crookedness or sharp practice taking place during the Fair. They insist that everything shall he open and above hoard, and that if any hookmakers are allowed to do husiness on the track the privilege shall be open to all so long as they conduct an honest book and meet in fair and open competition.

"Pacing and trotting races will he given greater encouragement than ever before, especially to California horses. The raising and exporting for sale of fine horses is among the first six or seven industries in our State, and this we consider entitles the interest of the horsehreeder to greater consideration at our hands, and it must be rememhered, at the same time, that they furnish the principal amusement for the patrons of all State Fairs.

"It will he the endeavor of the Board of Directors to have every exhibit of whatsoever kind held upon the fair grounds, so that one admission fee only will be charged the puhlic to see the entire show, racing and all. This insures every merchant, manufacturer, farmer and producer of any kind that all who see the races will see his exhihit, and thus all who go to see the exhibits will he ahle to see the races, and in this way the entire Fair can he conducted by one set of employes at a greatly reduced cost from the present plan, where one show is at the State Pavilion and the other on the fair ground.

"The Board of Directors has instructed me to discharge any man, regardless of political or other influence, who does not give us a full day's work in return for the liheral wages we will always expect to pay.

"I do not believe it possible for the State Fair to be entirely self-sustaining for the next year or two, but I am instructed to so conduct the racing that it will be absolutely self-supporting, and that should there be a deficit it must ho chargeable to premiums and expenses incurred in encouraging other industries.

"In California we have hred and are still hreeding the best, the finest and fastest horses in all the world, and it is important that we should as a State have a race track as good as can be found anywhere so that upon our own soil these grand horses can make those record breaking hursts of speed that have made California famous the world over, and have been among the best advertisements this State has ever had. The State of California very properly spends thousands of dollars in placing exhibits at all the great expositions for the benefit of the advertising it gives our State, hut none of this money can be so well spent as the money be that would give to California a grand State Fair, properly encouraging the exhibition of all the products of this great and immensely rich State.

"The Directors of the State Board of Agriculture are all prominent and prosperous business men from Sacramento and other counties in the State whose names are synonymous with enterprise and prosperity, each of whom is deeply interested in this State's welfare. They receive not one cent compensation, railroad, per diem, hotel or other expenses, yet they come from all parts of the State, to the detriment of their own husiness interests, to attend the meetings of their Board. Their ambition is to now place the State's agricultural interests prominently before the people and they are taking steps to gather bonafide and accurate data regarding all State products of whatsoever kind that it may he used in their reports and given to the public. They are determined to give to the people a State Fair that will he a credit to the State, a grand advertisement of our products abroad and an encouragement to our producers at home. Should I be able to carry out their ideas and instructions California will have a Fair that will draw thousands upon thousands of people and benefit our products and producers to the value of hundreds of thousands of dollars. This with the liberal financial support of the State, the Governor's approval and the moral support of the people, I hope, as their employee, to be ahle to do."

Dexter Prince.

The death of Dexter Prince, hriefly noted in our last issue, adds one more to the list of stallions that have passed away during the year. Dexter Prince was hred by Charles Backman of Stoney Ford, New York, and sold to Senator Stanford, who afterwards concluded that he was not the horse he wanted and sold him to L. M. Morse of Lodi, California. After Mr. Morse's death the horse passed to Dan McCarty, who in turn sold him to Mr. A. B. Spreckels. While Mr. Spreckels owned Dexter Prince the stallion was leased for several years by Palo Alto Stock Farm, and the best mares on the farm were hred to him.

Dexter Prince was a hay horse foaled in 1879 and was by Kentucky Prince, son of Clark Chief and Kentucky Queen by Morgan Eagle, a son of Hale's Green Mountain Morgan. The dam of Dexter Prince was Lady Dexter, an own sister to the one time champion Dexter 2:17¼, heing hy Hambletonian 10 out of Clara, the great hroodmare hy American Star 14 that also produced Alma 2:28¾, Astoria 2:29½ and the great sire Dictator. Dexter Prince was eleven years old in 1890, and during that year two of his get took records, the pacing mare Princess Alice getting a mark of 2:16, and the trotting three-year-old stallion Lottery Ticket one of 2:25. The following year four standard trotters were added to his list and the next season twelve new additions were made, the fastest being the pacer Charley Ford that took a record of 2:12½ and the trotters Aster and Crown Prince that took records of 2:16 and 2:17½ respectively that year. At the close of 1893 he had 22 trotters and 6 pacers with standard records to his credit. In 1894, his first 2:10 performer appeared, the pacing mare Edith taking a record of 2:10 that year. In 1896, James L., one of his get, took a trotting record of 2:09½, while being raced on the Grand Circuit, giving him his second 2:10 performer. At the time of his death he was the sire of the following with records below 2:15: Lisonjero 2:08¼, Eleata 2:08½, James L. 2:09½, Aster 2:12, Crown Princess 2:13¼, Lucrativa 2:13½, Czarina 2:13¾, all trotters, and Edith 2:10, Prince Nutwood 2:12¼, Charley Ford 2:12½, Thomas H. 2:14¼, Alto Genoa 2:14½ and Version 2:14½, all pacers. Daughters of Dexter Prince have produced the trotters J. T. 2:12¼, Nora McKinney 2:12¼, Directum Lass 2:14½ and the pacers Toppy 2:10 and Delphi 2:12¼.

Up to the close of the trotting season this year he had sired 65 standard performers, 6 sons that are producing sires and at least a dozen daughters that have produced standard speed. His fastest trotter is Lisonjero, a horse that created quite a sensation on the Grand Circuit this year, and has shown speed enough to warrant the prediction that he will heat 2:05 next season.

Dexter Prince was a grand looking horse, powerfully muscled and imparted to his get, size, good looks and speed of a high order. His blood will be more valuable as time goes on, and through his daughters especially it is predicted that many trotters of extreme speed will come, while his sons are already showing themselves to be producers of race winning speed. His son Pilot Prince is already the sire of a 2:10 performer in Nance O'Neil 2:09¾ a mare that is expected to lower her present mark. Dexter Prince blood is stout blood and crossed with that of the Wilkes and Electioneers will produce speed with great uniformity.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

John Caldwell 2:11 1 4.

The following interesting article about a California horse, his owner and his trainer appeared in the Christmas *Horse Review* under the head "Trotting Stars of 1904."

Among the California trotters racing East 1904, John Caldwell 2:11¼ was one of the most attractive. He is a splendid type, very handsome in harness or to halter and his gait is so pure and perfect that no matter how many horses may he on the track he cannot fail to attract attention. He was practically green when he came East to tackle the "quality" this summer and while there were those who took faster records it is a difficult task now to pick out a trotter having a hetter chance for the 2:12 stakes in 1905.

His owner, Col. J. C. Kirkpatrick, of San Francisco, is one of the most enthusiastic trotting horsemen on the Pacific Coast. Through good and bad times Col. Kirkpatrick has stood hy the trotting bred horse as breeder, owner, and road driver, and member of the Pacific District Board of the National Trotting Association. He is a familiar figure on the Golden Gate Park speedway, and no man enjoys a brush more—and, hy-the-way, the Colonel can team one like a professional. He speeds several days each week at his Pleasanton home and, during the training season, takes much pleasure in the workouts.

John Caldwell was trained and driven hy James Thompson who has hrought over many good trotters and pacers during the past ten years. He was with Monroe Salisbury when that gentleman had his great stables along in the early nineties. Thompson is a painstaking trainer, and no man looks after the minor details of care in feeding, etc., more closely. As a result his horses are generally in fine condition at the season's end. John Caldwell might have stepped into the show ring after his closing race at Memphis.

Beginning his campaign at Detroit he won third money, and the following week at Buffalo in the Queen City $2000 stake for 2:19 trotters, won fourth money, finishing 7–3–4 in 2:09¼, 2:08½, 2:09¼. He was out of the money at the Empire City, hut at Brighton Beach was second to Alexander Campbell in the 2:17 trot at a mile and one-sixteenth. At Readville, in the $5000 Blue Hill for 2:30 trotters, he won third money, finishing in 6–4–2 in 2:09¾, 2:09½, 2:09¼. He was unplaced at Providence, but in the Capital City $2000 trot at Hartford, won third money, finishing 3–2–2–3 in 2:12¼, 2:11, 2:13¾, 2:11¼. Returning to Readville, Mass., for the Breeders meeting, he scored twice. First starting in the 2:25 trot, he annexed the event in straight heats; time, 2:15½, 2:15¼, 2:14½. Later in the week he started in the 2:16 class, meeting a big field and beating them after four heats, his winning time being 2:12¾, 2:14, 2:13½. At Columbus he met the sensational Alexander and a good field and won the first heat in 2:11¼, but was heaten in the subsequent ones although he finished second three times. When Oakley Park was reached he met a hig field in the 2:23 trot valued at $1500, and won the last three heats in 2:13¾, 2:12½, 2:13¼. Starting the following week at Lexington he was unplaced in the 2:14 trot, hut the next week at the same place annexed the West, valued at $2000. It was a straight affair, Caldwell winning easily in 2:13¾, 2:12¾, 2:11¼. But it was at Memphis that he showed a flight of speed that set all the hoys to talking. In going around the first turn in the 2:20 trot, for which Caldwell was the favorite, Thompson was crowded and forced to take his horse out into the soft footing. So the gelding did an unusual thing for him—hroke. After catching, the field was far ahead, hut Thompson had hopes of saving his distance. Caldwell stepped the last three-quarters of the mile, according to several watches, in 1:32½. He was distanced despite this terrific flight, but still many think be beat the flag a fraction.

Thompson will be east again with the handsome son of Strathway 2:19 in 1905. It will not he strange if the gelding then douhles his suhstantial winnings of 1904, which were $5065.

Mr. J. C. Linneman of Lima, Ohio, claims to have the hest hred McKinney colt in the world. The youngster's name is Norval McKinney, and as his name implies he is hy McKinney 2:11¼. His first dam is a daughter of Norval 2:14¾, son of Electioneer. His second dam is Miss Gabrielle (trial 2:24½) hy Wilkes Boy 2:24½; third dam Gabrielle Wilkes by Baron Wilkes 2:18; the fourth dam is Strathnette (dam of Timewood 2:19¼ and Wiltwood 2:29½) hy Nutwood 2:18¾. The fifth dam is the great hroodmare Loraine (dam of Josephine 2:22¼ and grandam of Dentine (4) 2:13¼, Bessie Owens 2:13¼, Rena Wise (4) 2:15 and two others, and great grandam of Hilgar (2) 2:15¾) hy Strathmore. The sixth dam is the great hroodmare Young Winnie (dam of three and grandam of Dreamer (3) 2:14¼ and two others) hy Woodford Mambrino 2:21½ and his seventh dam is Winnie hy Alexander's Ahdallah.

Notes and News.

Happy New Year!

Begin pulling for a good circuit.

The more good meetings, the better horse values will be.

Belle Mac 2:04¼, and Hetty G. 2:04¼, are the premier pacing mares of 1904.

Enter your foals of 1904 in The Occident Stake of 1907 which closes January 1st.

Millard Sanders will work about twenty young Axworthys at Memphis this winter.

It is stated that the Kansas stallion Symboleer 2:09½ was mated with 160 mares this year.

Mr. Billings expects to ride Alexander 2:09¼ against the saddle record for trotters, next season.

E. B. Rice, the Boston man, who bought John M. 2:02¾, may drive that horse himself in his next season's races.

Thomas Sharkey, the pugilist, is said to be the purchaser of Oak Blossom 2:12¼ She will be shipped to England and raced.

The Professional Drivers' Beneficial Association has increased the dues from $5 to $10 per annum, and the secretary's salary to $600.

J. C. Montgomery, of Davisville, has purchased a new McMurray cart from the Kenney Manufacturing Company. It is the 1905 model and a beauty.

Dr. J. C. McCoy now owns Admiral Dewey 2:14¼, having bought A. J. Welch's interest in the horse. The son of Nancy Hanks will be raced next season.

Alta Axworthy, Prince Alert, Hopper, Trilby Direct, Direct Fire, Oak Blossom and Katherine A, sailed for England, December 10, on the Minnehaha.

Robt. H. Cosgrove has made arrangements to manage the Inter-State Fair another year, and will undertake to make the fair of 1905 bigger and better than ever.

George Van Dyke, of Boston, wanted Sadie Mac, and it was only through a misunderstanding that Lon McDonald did not buy her for him, that is, provided Miss Wilkes had not gone over $25,000.

Phebon W., 2:08¾, started in eight races in the Maritime Provinces the past season, never losing a heat and winning $1650 in premiums within seven weeks. He is by Hambletonian Wilkes.

Look up the record and breeding of the animal you are about to buy before closing the deal. It is better to be disappointed with the money in your own pocket than after it has been passed to the other fellow.

Mary Lou 2:17, dam of Kinney Lou 2:07¾, and Atoka, dam of Altoka 2:10½ and Axitoka 2:29¼, both in foal to McKinney 2:11¼, were shipped from New York to Lexington recently to be bred to Silent Brook 2:16½.

Newspaper reports from Buffalo, N. Y., say that the veteran horseman, Cicero J. Hamlin, founder of the famous Village Farm, is in very poor health, and that the venerable gentleman may not long survive.

Adrexa, by Advertiser 2:15¼, out of a mare by Dexter Prince, is expected to be one of the crack trotters of the Pittsburg matinee brigade next season. She has shown her ability to trot in 2:15 and is a show mare.

Belle Kuser 2:08 was the heaviest winner among the ex-American trotters raced in Austria in 1904 She captured 25,000 kronen—about $6000. Contralto 2:10 was second with 22,000 kr. and Dolly Dillon 2:06¾ third with 17,200 kr.

Frank McVey, a well-known Indiana trainer, at one time on the Jewett Farm training staff, died Nov. 22, at Danville, Ind., of consumption. Mr. McVey was a genial, companionable man and a very successful speed developer.

Make the sixth payment in the Breeders Futurity of 1905. The payment must be made on or before next Monday, Jan. 2d. The stake is worth $7000 which is a thousand more than the original guarantee. If you are in stay in.

Those who were hoping to see Grace Bond (3) 2:09¼, Alta Axworthy (3) 2:10½, and Sadie Mac (3) 2:11½ meet in some rich early closing event next season will be disappointed now that the daughter of Axworthy has been bought by a foreigner.

It is said that Secretary Bentley, of the Buffalo, N. Y., association, will for their Grand Circuit meeting in 1905, adhere closely to the plan of racing, which he carried out this year and which proved to be quite popular, and that is of making every heat a race, with ten per cent extra to the winner of the event. Only one change will be made and that will be that in place of awarding first money to the winner of the fastest heat his association will give the heat winners the track and let them fight it out for the moneys.

Billy Andrews with Grace Bond won $16,000; with Tiverton, $9,000; with Cheery Lass, $1900; with Angus Pointer, $1550; and with Phalia, $1000. Cheery Lass had no stake engagements, else her earnings would have been greater, as she did not lose a race.

Prince Alert 1:59½, Alta Axworthy 2:10½, Katherine A. 2:11¼, and Oak Blossom 2:12¼ were all shipped to England from New York last week. Katherine A. and Oak Blossom were taken solely on speculation by John Schoonmacher, who is said to be acting for Thomas J. Sharkey.

The noted trotting stallion, Grattan Boy 2:08, purchased last October by the Knoxville, Ia., banker and breeder, J. B. Elliott, has been sold to J. J. Thompson, of Opelousa, La., who has been breeding trotters on a small scale for some time, and is now branching out more extensively.

Harry Benedict, Scott Hudson's second man the past season, has signed a two years' contract to train for William Simpson, Empire City Farm, Cuba, N. Y. Mr. Benedict left Lexington for New York on Saturday last. Billy Andrews will still do the driving for the Empire City Farm.

Joseph McGuire, trainer for George Estabrook, Denver, is in California in the hope of finding relief from a very severe attack of sciatic rheumatism that has troubled him for some time. He denies that he had any commission to buy horses, though admitting that he might price one or two promising ones, if he saw them.

Twenty-odd mares have already been booked to Sidney Dillon since his arrival at Maywood Stock Farm. They came from Indiana, Missouri, Wisconsin, Minnesota, etc., Ex. Gov. Colman, of St. Louis, and August Uihlein, Milwaukee, being among those having already made bookings. The trio champion sire's book will readily fill.

J. B. Chandler and Al Hughes, will jointly race a stable of trotters and pacers the coming season. Messrs. Chandler & Hughes have been associated together for the same purpose in the past, both being connected at one time with the Shadeland Onward people at Fullerton, Neb., and together they conducted a public stable at Wichita, Kan.

Sweet Rose dam of the yearling colt Mac Rose that John R. Cole of San Bernardino recently sold for $5000, was a great colt trotter herself and took a record of 2:25¾ as a yearling. She is an own sister to Mazatlan 2:26¾, now called Infact, and also to Mont Rose that took a three-year-old record of 2:18. Sweet Rose is by Electioneer out of Rosemont by Piedmont, second dam Beautiful Bells by The Moor.

N. W. Hubinger has engaged Fred Hyde, of All Right 2:09½ fame, to train his stable next season. Of late years the New Haven horseman has done comparatively little Grand Circuit racing. He once was the kingpin owner, and had such as Frank Agan 2:03¾, Grace Hastings 2:08, Royal Baron 2:10½ and other good winners at various times. No one will bet more when he is in form, and he is a good loser.

The world's champion three-year-old trotting record still stands at 2:08¾, and to the credit of Fantasy, a daughter of Chimes, by Electioneer. That Grace Bond 2:09¼, was capable of shading it had she been specially prepared is highly probable, but her earning capacity would have been greatly reduced. She is now eligible to all the rich early closing events for 2:10 trotters, including the $15,000 Massachusetts.

Searchlight 2:03¼ will not be in California after May 1st. It is announced that Mr. Ed Mills has sold the great son of Dark Night to eastern parties and the horse will be shipped to Lexington, Kentucky, about the first of May. Searchlight has been bred to many of the best bred mares in California during his stay here and has two large crops of colts and another coming on. There should be some record breakers among them.

C. B. Knox of Johnstown, Pa., states that Anaconda, 2:01¾, trotting 2:09¾, is in grand shape and expects to see him hard to beat for the 2:10 race next year. Mr. Knox owns a two-year-old pacing colt that is a wonder. He is by Fuzzy 2:14¾, son of Ashland Wilkes 2:17¼, and has been trained the past summer ... track at

At the meeting of the N. C. J. C. stewards the other night nothing wrong was found with the r... of Helgesen or the running of W. R. Condon. ... are decided "in-and-outers." Helgesen was n... ways in that category, for up to the time he met the fearful accident at Kenilworth Park, Buffa... the fall of 1903, he had a penchant for winning along, and his honesty had never been questio... Besides that, he was one of the most modest boys ever made a great name riding race horses. everything seems changed—even his disposition

The annual meeting of the directors of the New England Trotting Horse Breeders Association last week the report of the treasurer showed that there was a deficit for the year of $43.14. There was a profit on the Grand Circuit meeting of $15,318.99. There was derived from stall and track rent $5084 and from sundry small items $121 25. The horse show was a loser by $3,970 82. There was also a loss on the September meeting of $832, and on the spring meeting of $408 75. The other items making up the debi account of profit and loss, including expenses, salaries, labor, insurance, repairs on building, etc., brought the total up to $20,567.28.

Harry Alexander and J. W. Monroe of Newcastle, Pa., purchased the fast stallion Gazette 2:07¼ at the Old Glory sale in New York November 29th, paying $1610 for the son of Onward. Gazette has a trotting record of 2:23¾ in addition to his fast pacing record, and has been a successful sire as he sired Aileen 2:07¼, Lizzie McChord 2:13¼, Beauty Spot 2:14¼ and many others. His dam is the great brood mare Siren by Dictator 113, second dam by Mambrino Chief 11, third dam by Park's Highlander and fourth dam by Grey Eagle.

It is already arranged for Lou Dillon and Major Delmar to come together at the Cleveland matinee races next year. In conversation with H. K. Devereux, president of the Cleveland Gentlemen's Driving Club, Mr. Billings said, a few days ago: "There has been so much controversy as to which is the faster of these two trotters that I have decided that the matter will be fought out in a friendly way. Lou Dillon will be brought back from California in time for the matinee season, and if both horses are right we will have some great sport. One day you will drive Major Delmar and I will drive the mare. The next Saturday we will shift, and in that way we will see which is actually the faster. More can be accomplished in that way than any other."

Dan Patch, the king of the pacers, received a royal welcome back to Minneapolis the other day. Led by a band and followed by at least two thousand horse enthusiasts, Dan marched from his car at the Union Station to his winter quarters at the residence of his owner, M. W. Savage. He will be taken to the big farm in the Minnesota Valley about February 1. Despite the mid-season illness which came so near ending his life, Dan Patch came back to Minneapolis with two new world's records to his credit. At Memphis he negotiated the mile in 1:56 flat, clipping one-quarter of a second off his previous mark. At Oklahoma City he went the mile out in 2:03, a world's record for a half-mile track. Arion, recently purchased by Mr. Savage in New York, has also arrived at Minneapolis.

Sterling R. Holt, of Indianapolis, Ind, the man who bought Sidney Dillon, the sire of the world-famous Lou Dillon 1:58½, at the Fasig-Tipton sale last month, is one of the leading breeders of the Middle West. His breeding establishment, Maywood Farm, is but a short distance from the city of Indianapolis. Until the purchase of Sidney Dillon, Mr. Holt's leading sire was the former Villiage Farm sire, Rex Americus 2:11¼. He also owns a very highly-bred son of McKinney 2:11¼, but from now on Sidney Dillon will be the leading stallion at Maywood Farm. The California stallion has sired only fifteen foals previous to Lou Dillion's appearance on the turf. At Maywood Farm he will get the best of opportunities, for at no farm in the country is there a better lot of broodmares.—*The Trotter and Pacer.*

The death of D. W. Brenneman breaks up another historic trotting horse breeding establishment, Elm Grove Stock Farm, Decatur, Ill., and draws onto the market the renowned Highwood and the grand young California-bred trotting stallion Gazote (3), winning race record 2:16¼. Highwood was the first trotting-bred weanling to sell as high as $3750, at which time he was elected by A. L. Thomas, then superintendent of the Caton Stock Farm, as probably the best future speed sire then in sight Results have been shown how eminently solid Mr. Thomas' judgment was, as Highwood has long been one of the particularly bright stars in the galaxy of great sires. His list of great race horses includes Caid 2:07¼, a champion of two continents; Early Reaper 2:09¾, himself a most promising sire; Ida Highwood 2:09¼, Ilive 2:11¼, Flash Lightning 2:13, Curta 2:13¼, and many others.

Several New York horsemen went to the dock to bid royal old Prince Alert farewell, before he started for his English home, writes Sam Freemar. The Prince is one of the most popular horses that ever raced in this country, as well as one of the fastest. He is now twelve years old and although he has been gruelled over all sorts of tracks and on all sorts of occasions, his legs are as smooth as glass, not a pimple on them. He will last long on the cinder tracks of Great Britain, and will no doubt open the eyes of the English public with his speed. Many horsemen patted the old hero for the last time and wished him bon voyage. He certainly fell into the hands of a good man, for it is Mr. Winan's custom to pension all his good ones when their days of usefulness is over, and he rarely, if ever, sells one. Eddie Mitchell will be able to split the tracks of England wide open with the handsome old hero.

Eddie Mitchell, who was the principal caretaker of Cresceus 2:02¼ for years, and who has been in the employ of George Ketcham for thirteen years, has entered the employ of Mr Louis Winans, of Southwick, England, who has quite a stable of trotters and pacers and recently purchased several high-priced ones at the Old Glory sale and from private owners. Among those that Mitchell will have under his charge next year are the king of hopple pacers, Prince Alert, one of the fastest harness horses in the world; the sensational youngster Alta Axworthy, for which he paid $13,000, and several other cracks; the four-year-old mare Katherine A. 2:11¼ just purchased from Mr. James L. Clay, of Paris, Ky, for $9000. She is by Wiggins—Zoraya, by Guy Wilkes, and won the two-year-old division of the Kentucky Futurity and was a good second to Sadie Mac in the three-year-old division of that event. Another one bought in Kentucky for the Winan's string, Oak Blossom, for which $5000 was paid, arrived in New York and will be shipped at once to England. All of them will be campaigned on the English tracks as well as on the Continent. Prince Alert is the first two-minute performer ever shipped to the other side; but being a pacer will probably be used exclusively in England

In Training at Pleasanton.

The following list of horses in training at Pleasanton was prepared December 17th for our Christmas number by Horace Collins, but was crowded out at the last minute.

A. L. McDonald—[illegible], by McKinney-Altila, [illegible] by McKinney, dam by [illegible] b m, by Zombro, dam by [illegible] by Lord Kitchener, dam [illegible] McGregor, b c, by Ray Direct, [illegible] by Chas. Derby, dam by [illegible] colt by Chas. Derby, [illegible] gelding by Prince Almont, dam by [illegible] black filly by Rey Direct, [illegible] brown four-year-old stallion by Chas. Derby, [illegible] Bertha, by Alcantara.

Sutherland & Chadbourne—John R. Conway, 4, by [illegible] by [illegible]; Pen Russell, 4, by L. W. Russell, dam by Lone Pine; black mare, 5, by Bradtmoor, dam by Steinway; brown stallion, 5, by Diablo, [illegible]; Stickle, six-year-old stallion, by [illegible] by Buccaneer; Oakland Girl, 5, by McKinney, dam by J. O.; bay gelding, 7, by Lottery [illegible] by Rector; bay gelding, 2, by Nutwood Wilkes, dam by Rajah, bay gelding, 5, by Bay Bird, dam by Algona; chestnut gelding by Nutwood Wilkes, dam by Woolsey; brown stallion, 1, by Zombro, dam by Diablo; bay filly, 3, by Son of Oro Wilkes, dam by Nutwood Wilkes; Yolande, 3, by McKinney, dam by Guy Wilkes; Tin[illegible], 2, by McKinney, dam by Guy Wilkes, chestnut filly, 1, by Owyhee, dam by Alcantara; Tom Clancy, 2, by Prince Direct, dam by Piedmont, bay stallion, 1, by Stam B., dam by Piedmont; bay filly by Sidney Dillon, dam by Lone Pine; bay mare, 4, by Son of Guy Wilkes, dam by Autevolo; Directum II, 5, by Directum, dam by Director; Dingee, 2, by Nutwood Wilkes, dam by Director.

George Ramage—Bert Arandale b g, by Sidney Dillon, dam Oakley Russell; Clara Oakley, b f, by Sidney Dillon, dam Oakley Russell; Florence Stone, br f, by Welcome, dam by Mambrino Wikes.

Geo. A. Davis—King Willis, 2:1, b s, by Maggie Glynn, b m, by Robin; San Lucas Maid, ch m, by Dictatus; black colt by Rey Direct, dam Sidlette; black colt by Rey Direct, dam Antecora; Eva Key, blk m, by Rey Direct, dam Eva T.; Odds Ends, by Rey Direct, dam Moscovia; bay colt by Hart Boswell, dam Midget; bay colt by Charles Derby, dam by Direct; black mare by Rey Direct, dam Stemwinder.

P. W. Hodges—Bay colt, 2, by Nutwood Wilkes, dam Atherine by Patron; Owynex, b c, 4, by Owyhee, dam Inex; Lady Zombro, br m, by Zombro, dam by Woolsey; bay filly, 3, by Stam B., dam Atherine by Patron; brown colt, 1, by Zombro, dam Hazel Kinney; brown filly by Petigru, dam by McKinney; bay filly, 1, by Zombro, dam Atherine by Patron; Potrero, b s, by Redoudo, dam by Junio; brown filly, 2, by Direct Heir, dam La Belle by Sidney; brown mare by Zombro, dam by Christmas.

C. L. Griffith—Bonnie Direct, 2:05½, by Direct, dam Bon Bon; Bonnie Steinway, 4, by Steinway, dam Bon Bon; bay filly, 2, by Bonnie Direct, dam Petrina by Piedmont; bay gelding, 2, by Bonnie Direct, dam by Whips; black gelding, 2, by Bonnie Direct, dam Alta Nola, 2:18; bay filly, by Bonnie Direct, dam by Steinway; brown filly, 1, by Bonnie Direct, dam Jennie Mac, 2:09, by McKinney; black filly, 1, by Bonnie Direct, dam by Lakeland Pilot; black weanling colt by Bonnie Direct, dam Belle by Abby; brown weanling filly by Bonnie Direct, dam by Rory O'More; Oceana by Charles Derby, dam by Woodnut; bay mare by Charles Derby; bay gelding by Seymour Wilkes; Highball, 2, by Daedalion, dam by Silver Bow.

Ed Mills—Searchlight, 2:03¼; Lecco, 2:09¾; chestnut mare by Charles Derby, dam by Alcantara; four-year-old filly by Direct; chestnut mare by Diablo, dam by Mambrino Wilkes; weanling filly by Lecco, dam by Sidney.

Johnson—Grecko by McKinney, dam Allen by Antero; Lady Bug by Intilla, dam Bessie by St. Clair; Grace H. Speers by Waldstein, dam Sadie Moor by Grand Moor.

J. N. Minor—Morosco, 2:12, by Wayland W.; Fredericksburg, 2:12, by Nephew Jr.

M. Henry—Ed Kell, blk s, 66, by Educator, dam by Rustic; Lelah, blk c, 3, by McKinney, dam by Director; Dora b f, 4, by Educator, dam by Silver Bow; John C. Henry, b c, 2, by Educator, dam by Silver Bow; Will Guthrie, blk c 2 by Educator dam by Guide; Hiram Mabury, b c, 2, by Educator, dam by Albion; Robert C., b g, 4, by Gossiper, dam by Algona; Rodger C., b g, 3, and Frank C., br c, 2, full brothers to Robert C.

Barney Simpson—Arner, 2:17¼, br h, by Charles Derby, dam Bertha by Alcantara; Babble, sister to [illegible], by Welcome, dam sister to Cricket, 2:10; [illegible] Palmer, mare, by son of Hambletonian Wilkes; bay gelding by Hambletonian Wilkes; bay filly by William Harold, dam by Direct; chestnut gelding by [illegible], dam by Englewer, chestnut filly by William Harold, dam by Lustre; bay colt by Don Derby, [illegible] dam by Guide.

C. F. Ketchum—[illegible] Mar, sorrel filly, by Steinway; [illegible] Palmer, by Steinway; Mary Marie, by Hart Boswell; Lucy Dillon by Sidney Dillon; brown [illegible] sister to George G. 2:06¼; brown gelding, Dick.

Dr. C. C. Ricks—Bay [illegible] by [illegible], dam Fatinitza, by [illegible] Hayward; [illegible], b c, by McKinney, dam Stamboulette 2:27¼ by Stamboul, Jenny Love, b f, by McKinney, dam Fatinitza; Maud Sears, 2:23, by Wayland W.; [illegible] thoroughbred.

Geo. A. Kelly—Jimmie Hard Luck, blk g, by Antrim; bay mare, by Del Norte; Jule, by Glenelg, dam by Ingraham; Bonnie McK., b [illegible], by McKinney, dam [illegible], 2:14¼, by Stamboul; Bird Way, rn c, by [illegible], dam by Jay Bird; Searchlight Jr., b s, by Searchlight, dam by Sable Wilkes; bay mare, by [illegible], dam Arranax; Johnnie McKenzie, b g, by [illegible].

[illegible] Corey—Bay filly, 4, by Donnybrook; brown two-year-old, by Donnybrook; bay filly, by Baywood, dam by Algona Jr.

J. M. Alviso—Rey del Diablo, 2:14¼, by Diablo, dam Rosita A.

A. W. Boucher—Harry Logan, 2:12¾, by Harry Gear, dam Miss Logan, 2:0¼.

H. H. Dunlap—King Cadenza, 2:15¼, by Steinway; Harold D., ch g, by Dexter Prince, dam by Gossiper; Corsicana, by Wildnut, dam by Dexter Prince; Explosion, b m, by Steinway, dam by Egmont.

Dan Misner—Homeway, b g, by Strathway; May Ola, blk m, by Valotta; Jean Madison, by James Madison; Lottie, by Sidmore; Crescent, b g, by Nutwood Wilkes; Jessie Madison, by James Madison; Ola M., by McKinney; Kenney, b g, by McKinney; Edward H., rn g; bay gelding, by Strathway; Flora G., ch m.

Farmer Bunch—Hattie Croner, by Bay Bird, dam by Algona; Louise Croner, by Wild Boy, dam by Abbotsford; Elmoreen, by Iris, dam by Strathway; Longitude, by Meridian, dam by Anteeo; Still Better, by Iran Alto, dam Much Better, 2:07¼; Marconi, by Boodle, dam Much Better; Mrs. Weller, by McKinney, dam Much Better; Alto Downs, by Iran Alto, dam by Boodle; Zella McKinney, by McKinney, dam by Iran Alto; brown colt, by Waldstein.

William Brown—Golden Gate, b g, by Bay Bird, dam by Western; Alhambra, ch s, by Silver Bow.

James Berryman—Silver Moon, b s, by Silver Bow Jr., dam by Almoon; Dede, b f, by Charles Marvin, dam Heywood; Dot McKinney, b m, by McKinney, dam by Sidney; Monterey McKinney, b s, by Monterey, dam by McKinney.

Jos. Smith—Venus Derby, b m, by Charles Derby, dam Venus; bay gelding, by Vasto; Sweetheart, gr m, by Baywood, dam by Eugene Casserley; Commander, blk s, by McKinney, dam Daisy S.; bay gelding, by Silver Bow.

S. Trefry—Kenneth C., 2, by McKinney, dam Mountain Maid.

A. H. Wayne—Bay gelding, 8, by Bay Bird, dam Cecelia; black gelding, by Knight, dam La Scala, by Alaska; bay mare, 6, own sister to Carmelita, 2:10¼.

J. R. Albertson—Cresco Wilkes, 3, by Nutwood Wilkes, dam Allie Cresco; brown mare, by McKinney, dam by Washington; Adina, b m, by Boodle, dam Alta Vola; bay mare, by Altamont, dam by Washington; bay gelding, by Hart Boswell, dam by Blue Bull; bay gelding, 2, by Owyhee; chestnut stallion, by Nutwood Wilkes, dam by Jim Mulveney.

C. A. Servis—Edwin S., cb g, 2:08, by Dr. Hicks, dam by La Harp; Dr. J., rn g, by Dr. Hicks, dam by Singleton; brown gelding, full brother to Dr. J.

E. E. Smith—Prince Charles, ch s, by Charles Derby, dam by Memphis.

Ben Chaboya—Major Cook, b g, by Charles Derby, dam Allie Sloper; bay filly, Silver Eye, dam Centre Eye; Anna Held, b m, by James Madison, dam by Steinway; Lady Rey, b f, by Rey Direct, dam by A. W. Richmond; bay colt, 2, by Boydello.

J. D. Springer—Billy Red, 2:10¼, b g, by Glenelg, dam by Ingraham; Sonoma Girl, br m, by Lynwood W., dam Maud Fowler; Suomi, br s, by Zombro, dam Belle Medium; Don Z., b g, by Stam B., dam Lottie H.; Miss Idaho, 2:11¼, cb m, by Nutwood Wilkes; Argyle, b g, by Charles Derby, dam Flash, by Egmont.

Worth Ober—Teberan, 2:24, by Mambrino Wilkes, dam by Nephew; Jud, b s, by Silver Bow, dam Grace, by Buccaneer; chestnut mare, by Mendocino, dam Elsie, by Gen. Benton; black filly, by McKinney; bay colt, by McKinney; brown gelding, by James Madison; bay filly, by Stam B.; black filly, by McKinney, dam, the dam by Eleata, 2:08¾.

James Thompson—John Caldwell, 2:11¼, b g, by Strathway; Albuta, 2:24¼, br g, by Altivo; Elden Bells, br s, by Monbells; Emmy Lou, br m, by Welcome.

Thos. Ronan—Roan colt, Birdson by Antrim, dam by Jay Bird; Birdie, roan mare by Jay Bird, dam by George Wilkes; sorrel, three-year-old by Antrim, dam by Ingersol; bay filly (1 year) by Antrim, dam by Wm. L; bay yearling by Antrim, dam by Meridith; black mare (5) by Antrim, dam by Meridith; sorrel filly by Antrim, dam by Meridith; bay mare by Antrim, dam by Balmwood; bay mare by Alexis, dam by Meridith; bay mare by Meridith, dam Blue Mountain Maid by Alwood

The horses for East View Farm, New York, that will be under the management of Monroe Salisbury and trained by Chas De Ryder, did not reach Pleasanton in time for our correspondent to get their names and breeding for this issue. The only ones of the string that were at Pleasanton last winter, that have been returned are Consuela S. 2:07¾ and Ben F. 2:09½.

Up to the close of the trotting season this year he had sired 65 standard performers, 6 sons that are producing sires and at least a dozen daughters that have produced standard speed. His fastest trotter is Lisonjero, a horse that created quite a sensation on the Grand Circuit this year, and has shown speed enough to warrant the prediction that he will beat 2:05 next season.

Dexter Prince was a grand looking horse, powerfully muscled and imparted to his get, size, good looks and speed of a high order. His blood will be more

Look out for the youngsters by Zolock. The first crop started out as two-year-olds this year. There were very few of them, but they got their names in the winning list, Delilah 2:16½ pacing and Ambush 2:20 trotting being among the best two-year-olds of the year. Hylock is to be shipped to Hanford the first of the new year and will be worked there until about the first of May, when he will be shipped to his new home in Clinton, Iowa. Champlin Bros., his owners, are large importers of Belgian, Percheron and Shire stallions.

Brighton Beach Stakes.

The annual stake offering of the Brighton Beach Racing Association, entries to which will close on Tuesday, January 3, has many features that cannot fail to appeal to horsemen. The chief event of course is the Brighton Handicap of $25,000 for three-year-olds and upward, the richest handicap run in America. In three successive years the winner of this race has hung up a record at the distance. In 1902 it was Gold Heels, in 1903 Waterboy, and this year Capt. Brown's Broomstick stirred the racing world by winning in 2:02 4-5, running the mile and a quarter faster than horse ever had run it before over either a circular or straightaway course

A new feature on the association's stake roster is the Brighton Mile This is a weight for age race with $3000 added and as the name indicates the distance will be one mile. The Brighton Mile probably will be run on the opening day of the midsummer meeting, taking the place of the Test Handicap, also at a mile, which will be run later in the meeting.

Other events for three-year-olds and upward are the Jamaica Stakes, the Islip Handicap and the Nautilus Stakes. For the three-year-olds there are the Seagate Stakes, the Glen Cove Handicap, and the Sea Gull Stakes. The Montauk Stakes, the Atlantic Stakes, the Winged Foot Handicap and the Distaff Stakes have been provided for two-year-olds.

In pursuance of its policy of striving for the best the Brighton Beach Association has reached out a strong hand to the owners of cross country horses. Liberal as has been the course of the association in the past it now excels all previous efforts by adding $5000 to the Brighton Steeplechase which is to be run over the full course of about two miles and a half. The Brighton Steeplechase is a race at special weights for horses four years old and upward, with penalties and allowances. In view of the money added the entrance and declaration fees are extremely light and the race surely should appeal strongly to the owners of steeplechasers. There are two other steeplechases on the list, the Punchestown Handicap and the Curragh Stakes which is a selling event.

Two events are set down for the autumn meeting of 1905 and these are two of the most attractive races run at the Brighton course. One is the Brighton cup at two miles and a quarter and the other is its forerunner, the Cup Preliminary at a mile and a half. The cup will have a guaranteed cash value of $10,000 and in addition the winner will receive a gold cup of the value of $1000. These distance races are set down for the autumn because at that season of the year horses are much better fitted to negotiate, and owners are more willing to send them over, such a trying course.

Entries to the Produce Stakes of 1907 also will close on Tuesday, January 3. This stake has been framed on most generous lines. The fees are light and the conditions attractive. Not until November 1 of the year in which the horse is a yearling is there a fee of any kind and then only $10. Thus if a man races the produce of his farm he has an opportunity of trying his yearlings out before the first declaration fee of $10 is due. If he breeds for the public market he has had an opportunity of disposing of his stock before payment of any kind is to be made. The stake has a guaranteed cash value of $30,000 and will be run in two divisions, one race for colts and geldings and one race for fillies. The nominators of the first, second and third horses in each division of the stake will receive $1000, $300 and $250 respectively so that no matter into whose hands the produce of his farm may pass the breeder always retains a financial interest in it.

Hal B. 2:04 1-2.

The famous Hal family of Tennessee pacers has had few representatives in California, but one of the best of the tribe is now stationed at Los Angeles and will make a season there until April 15th. This is the horse Hal B., the largest money winner on the Grand Circuit in 1899, where he started nine times and won all his races. Hal B.'s record of 2:04½ was made that year in his Cleveland race where the heats were in 2:06¾, 2:04½, 2:05¾. Hal B.'s sire Hal Dillard has a record of 2:04¾ and his dam has produced two with records better than 2:05, Fanny Dillard 2:03¾, which is the fastest pacing record for a mare in a race, and Hal B. 2:04½. Hal Dillard has 32 in the 2:30 list and 9 in the 2:15 list, four of which have records better than 2:10. Hal Dillard is by Brown Hal, a horse that has 11 in the 2:10 list, headed by Star Pointer 1:59¼ the first two minute horse. Hal B. not only inherits speed but he transmits it, and though a comparatively young horse has already sired four standard performers He is a very handsome horse and should be well patronized by California breeders. The Hal blood is a valuable acquisition to California.

THOROUGHBREDS.

That Californians are the greatest sport lovers on the globe is best evidenced by the mammoth crowds attending the races these days at Oakland. The average attendance is easily 3500, while last Monday the club had its banner day for not only the season, but perhaps the attendance eclipsed the record for all time, not being far short of 13,000. The magnet was, of course, the Christmas Handicap, won by wonderful little Claude with 127 lbs. on his back, he leading from "eend to eend," as old John Harper would say. For his inches this same Claude is perhaps the best race horse seen in America since the day of Badge, and at the rate he is going it's no sure thing he will not cast in the shade the winning record of Byron McClelland's little horse. Luke Blackburn, who has just passed away, was an American champion racer that was decidedly "on the small side" as were Bramble and Bootjack, also sons of old Bonnie Scotland. Claude, however, with his four Derby wins in 1903 and his victories this season in both the Thanksgiving and Christmas Handicaps, is certainly an extraordinary little galloper The 'Frisco racing public is anxiously awaiting a meeting between Claude and Dainty at about a mile or a mile and a furlong. Both have demonstrated that they can either sprint or stay, and previous to winning the Christmas Handicap at a mile and a quarter Claude had shown his many-sidedness by capturing a six-furlong race over a rather slow track in 1:13 flat. It is believed that these horses could take up say 105 lbs. and break the Coast record at a mile (1.38¾), held jointly by Divina and the two-year-old filly Gold Rose. The latter made her phenomenal mark at Los Angeles last Tuesday with 195 lbs. up, it being her sixth consecutive win over the Ascot Park course. In this youngster the veteran Green B. Morris has indeed secured a speed marvel. Like Gold Money, she is by imp. Goldcrest, a sire that is looming up big on the breeding horizon.

Speaking of Gold Crest reminds me that the Bend Or breed of gallopers in America is far and away ahead of the Galopin or St. Simon crowd. Look at Ben Strome, imp. Order, Ornament, Golden Garter, Goldfinch, Sorcerer and all the other scions of the Bend Or or Doncaster branch of the Stockwell family. I would rather tie to a Bend Or horse when sires are being considered than any breed in the world, and figures will bear me out in this belief, too, not only this season, but last. And as for good looks there's nothing to compare with the sons, grandsons and great grandsons of the famous Derby-winner that begot the unbeaten Ormonde, "the horse of the century."

Trainers in the East as well as in this section are very sweet on the progeny of imp. Canopus, a son of Sheen and inbred to Tibthorpe. Mr. Lopez tells of one famous trainer in the far East who has four of these Canopus youngsters, and the clever conditioner declares to him that all four are destined to be "stake horses," or he doesn't know a good race horse when he sees one. One has worked quarters repeatedly in 0:23 flat, while the remaining three can reel off the distance any time in 0:23¾ or better. Canopus will in all likelihood keep company with the Galopin horse, Galveston, at the Yolo Thoroughbred Farm of John Mackey and Walter Jennings, near Woodland.

Since my article regarding the consistent racers of America appeared in this paper Claude has won twice, Leggo twice, Letola once. There were also a few wins at New Orleans which should be added to the list of the performers that captured at least one-third of their races during the season now rapidly drawing to a close. Gold Rose is also entitled to be in the list, with seven wins out of eleven starts.

If I am correctly informed, Dan McCarty ("White Hat") made a small fortune on his purchase of Puryear D. After he had secured the Deceiver horse at the A. B. Spreckels sale about two years ago for $50, so the story goes, along came Hazelwood, a son of his, to win several stakes in the far East for Billy Oliver. There were other good Puryear D.'s out last year also, and this season Dr. Leggo is pretty nearly at the top of the two-year-old tree so far as California is concerned. It begins to look as if Puryear D., opportunity considered, is a stud wonder, and if he receives just a fair chance will make a great name for himself. There are two members of the family of Puryear D.'s dam in California that I can call to mind, and they "made good" wonderfully well. Reference is made to E. J. Baldwin's great mare, Miss Ford and to Burns & Waterhouse's Talluda, purchased several years ago for $500 and producing Lord Chesterfield, Bonibel, Thaddeus, Toledo and other good winners. These mares are by Enquirer, as was the mother of Puryear D., and all trace to Tallulah by Planet, mother of about ten celebrities.

Royal White's win at odds of 40 to 1 last Tuesday recalls the fact that Royal Flush, his sire, was another stallion whose worth was not appreciated. As the sire of Flush of Gold, Canejo, Royal F. and Royal White, surely the Three Cheers horse was entitled to more consideration than to be used a "teaser," as was the case with the little chestnut fellow which took the measure of Geraldine, Zaldivar and other high-class racers in his day.

Some funny things occur around a race track. Last Tuesday Ink was a starter in the sixth race. A friend of the writer, pointing to three women grouped together against the balcony overlooking the betting ring, said: "See those women? This is the third time they've been given Ink." "Wonder they didn't get poisoned," I declared, but my friend was so intent on getting some Ink that he didn't see the point.

Jockey Eugene Hildebrand, by riding three winners last Wednesday at Los Angeles, has surpassed all the records of the past as to the number of winners ridden in a single season. This makes me hark back to the time that Hildebrand was under contract to Dick Ledgett, and it was a period when no one would give the lad a mount. One day Dick came to the writer and asked as a favor that I give the boy "a notice in the paper." "He's a good boy, and will make a rider sure, if he can ever get any decent mounts," said Ledgett, "and if you would just say something encouraging it would go a long way." I took Dick's word for it that "Hilde" would make a rider, and a complimentary notice followed which produced quite a ripple of laughter at the time. At any rate, it spurred the boy on, and I am glad to see the honest little fellow get to the top. This reminds me that I was something of a prophet in the cases of Jockeys Dick Clawson, "Doc" Tuherville, Johnny Woods, "Ice Man" Spencer and Johnny Bullman, as well as in the Hildebrand case, and remember very well the laugh that each prophecy provoked among the racing fraternity as well as if it were yesterday. "Another protege," some cynic would say. But I noticed that each and every one "made good," that the laugh was "on the other side of the face" before the festivities were concluded. I wish to risk another prediction or two, and that is that Riders Kent and Herbert, now little known beyond this Coast, will ere long be heralded as world-beaters at the riding game, and I also believe that T. Clark will make a good rider.

Speaking of riders makes me think of the serious accident that befell the smallest jockey at Oakland (Mikey Daly) last Wednesday morning, resulting in his left leg being broken just below the knee. In the afternoon his brother, W. Daly, was thrown by Ferryman and dragged quite a distance, though happily the injury sustained was not nearly as serious as in the case of the smaller lad. This makes two out of the three brothers Daly on the injured list, certainly a most unfortunate state of affairs for the elder Mike Daly who owns the gold mine Claude.

Jockey Davis' feat of riding the first four winners on the card last Wednesday, then two close seconds, goes far to prove the lad's worth as a race rider, for M. A. Powell was at 8 to 5, Albert Fir 3½ to 1, Angie as good as 3 to 1, and Scherzo 12 to 5

The last-named horse belongs to J. Naglee Burk, who bred the flyer, also his full brother, Impromptu. By the way, the next winner of the day after Scherzo came from the same part of the world—Scherzo from San Jose and Venator from Milpitas.

At the meeting of the N. C. J. C. stewards the other night nothing wrong was found with the riding of Helgesen or the running of W. R. Condon. Both are decided "in-and-outers." Helgesen was not always in that category, for up to the time he met with the fearful accident at Kenilworth Park, Buffalo, in the fall of 1903, he had a penchant for winning right along, and his honesty had never been questioned. Besides that, he was one of the most modest boys that ever made a great name riding race horses. Now everything seems changed—even his disposition. His modesty has been replaced by braggadocio and a desire to be seen and admired in public places. The patrons of racing can draw their own deductions, and those deductions will undoubtedly be that Helgesen, since the accident that nearly took away his life, is not the modest, dashing, winning jockey that he once was. A rest would undoubtedly do the lad much good, and might restore him to something like his former self. As to W. R. Condon, owner Louis Ezell proved to the satisfaction of the stewards that he had wagered heavily on the horse and wired friends at the East to plunge—when the galloper had lost and had failed to wager when W. R. Condon won. He exhibited his own losing tickets and some telegrams to and from some very "sore" bettors to prove what a gay deceiver W. R. Condon is. The horse's record in the far East, when he was at his very best, shows his inconstancy.

RALPH H. TOZER.

From Los Angeles.

The book containing the nominations for the stakes at Ascot Park has been issued and shows that the events have been very liberally patronized by those racing horses in this part of the country. The stakes are twenty in number with $26,000 in added money and closed as follows: The Ascot handicap, one mile and a quarter, forty-six entries; the Ascot Derby, one mile and a quarter for three-year-olds, sixty-five entries; the Ascot Cup, two miles, forty-five entries; the Ascot Oaks, one mile for three-year-old fillies, thirty-four entries; the Hollywood Handicap, one mile and a sixteenth, thirty-six entries; the Pasadena Handicap, one mile and a furlong, thirty-eight entries; the Santa Anita Handicap, one mile and a quarter, forty-six entries; the Riverside Handicap, one mile, seventy-three entries; the Mt. Lowe Handicap, six furlongs, fifty-two entries; the Rose Selling Stakes, one mile and a sixteenth, fifty-two entries; the Coronado Beach Selling Stakes, one mile and a sixteenth, sixty-two entries; the Santa Catalina Selling Stakes, seven furlongs, sixty-seven entries; the San Pedro Selling Stakes, one mile, sixty-six entries; the Woodlands Stakes for two-year-olds (now yearlings) four furlongs, fifty-six entries; the Santa Barbara Stakes, two-year-olds, fifty-three entries; the Santa Monica stakes, two-year-olds, five furlongs, fifty-two entries; the three other stakes are a hurdle handicap and two steeplechases with sixteen entries each. The majority of the horses entered are from New York with quite a number which have been racing in the Middle West; these horses are now all on the grounds at Ascot Park and their presence assures large and high class fields in all the events in which they are entered; the balance of the entries is made up of horses now racing in Northern California which may or may not be shipped here to participate in the various stakes to which they are eligible.

Arthur Worley arrived here last week with nine horses, the property of E. Schawaker, from New Orleans. Mr. Worley is one of the veterans of the turf and was connected with the game when Guttenburg was the scene of the "sport of kings."

H. T. Griffin is here from Hot Springs with ten head including Bell Curtis.

The latest arrival this week from New York was a car containing the stables of Billy Oliver, E. Peters and Geo. Berkel.

Parker & Thwaite and Peurl Wilkerson have shipped their horses from San Francisco to this point. This lot includes Strife, Warte Nicht, Bay Wonder, Fossil, Sad Sam, Komombo, and Bologna.

Chas. F. Dwyer of New York and Jockey Tod Sloan are familiar figures in the paddock and betting ring here; if Sloan gets his license from the English Jockey Club by the first of the year he will probably ride here for the balance of the season.

Walter Jennings was a visitor at the track last Thursday; he was ostensibly down here to secure a contract for the services of Bill Knapp, it was rumored that he had made the boy an offer of $5000 a year for a two years contract. Mr. Jennings also shipped Araho here in charge of Mr. Jas. Bondy, who started him in a five furlong purse race last Saturday. Araho ran as good a race as he ever did in his life, but was beaten a head by Line of Life who stepped the five furlongs in 1:01½ over a muddy track.

On Christmas Day there was a record breaking crowd at the track, even larger than on the opening day a month previous. An especially good card was run off and the betting was very heavy. There were sixteen books in the ring, and three field books attended to the wants of the one dollar bettors. The Hollywood Handicap which was the feature event of the card was won by Ethelyne who was in front from start to finish. This mare seems to be a holiday proposition as she has won both of the stakes which have been run so far; one on Thanksgiving Day and the other one on Christmas, while between times her running has been so bad that nobody could consider her chances in the stake as worth a bet. Fossil made his first appearance in this event and ran a good race finishing third; he will be hard to beat from now on.

Gold Rose, the two-year-old filly owned by G. B. Morris, is the only horse here with an unbroken series of victories, having won all her starts, five in number; she ran five furlongs in one minute flat, and the short six furlongs in 1:09 on two occasions. In all her races she has won with ridiculous ease, pulling up for the eighth of mile from field of good horses.

It rained a couple of days last week, but the weather is now clear and cold and quite frosty in the early morning, this has done the track lots of good and some fast time may be looked for this week.

Manager Brooks was presented with a beautiful diamond horse shoe pin by friends of the press and starter Dick Dwyer. GEO. B. KELLEY.

Jackson'e Napa Soda untangles the feet.

ROD, GUN AND KENNEL.

Conducted by J. A. De WITT.

Coming Events.

Rod.

Apr. 1-Sept. 1—Oct. 16-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed

Sept. 1-May 1—Open season for shrimp.

Jan. 1-July 1—Close season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Sept. 10-Oct 16—Close season for catching salmon.

Oct 15-Nov 15—Close season for taking salmon above tidewater.

Nov. 15-Sept. 10—Season open for taking salmon above tidewater.

Gun.

July 1-Feb. 15—Dove season open.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Nov. 1-July 15—Deer season closed.

Bench Shows.

1905.

Jan. 19 20—Bay State Co-operative Bench Show Association. Lynn, Mass. Tom B. Middlebrooke, Clerk.

Jan. 24 26. Rhode Island Kennel Club. Providence, R. I. H. M. French, Secretary.

Jan 25, 28—National Fanciers and Breeders Association. 5th annual show. Chicago. W. K. L. rnles. T A. Howard, Superintendent Chicago, Ills.

Feb. 13, 16—Westminster Kennel Club. New York City. Robt. V. McKim, Secretary. James Mortimer, Superintendent.

Feb. 21, 24—New England Kennel Club. Boston, Mass. Wm. B. Emery. Secretary. H E. Gero, Show Secretary.

March 21, 24—Buffalo Kennel Club, Seymonr P. White, Secretary.

March 29-Apr. 1—Long Island Kennel Club. Brooklyn, N. Y. Jos. M Dale, Secretary.

March 8, 11—Duquesne Kennel Club of Western Pennsylvania. Pittsburg, Pa. Fred'k S. Stedman, Secretary.

April 19, 22—Atlantic City Kennel Club. Atlantic City, N. J. Thos. H. Terry, Secretary.

Field Trials.

1905

— —American Field Futurity Stake. For Pointers and Setters whelped on or after January 1, 1904, whose dams have been duly qualified. Am. Field Publishing Co., Chicago.

Jan. 9—Pacific Coast Field Trials Club. Bakersfield, Cal. Albert Betz, Secretary. 201 Parrott Bldg., San Francisco, Cal.

Jan 9—Texas Field Trials Club. 3rd annual trials. Near San Antonio, Tex. T. A. Ferlet, Secretary, San Antonio, Tex.

Jan. 10—Georgia Field Trial Association. Albany, Ga. P. M. Essig, Secretary, Atlanta, Ga.

Jan. 16—United States Field Trials Club. Grand Junction, enn. W. B Stafford. Secretary-Treasurer, Trenton, Tenn.

NEW YEAR PUFFS.

By RED SPINNER.

Few are the anglers one has met who were not good smokers, yet they, like most of us, have always had the habit of changing their brands and pipe patterns, as they change their waters when fished out. Mark how natural it is to the fisherman to burn tobacco by the water side. And this I take it, is partly because one can smoke with more impunity in the open air than in the gas heated atmosphere of a room, and partly also because the soothing nature of the strange habit accords most heartily with the contemplative man's recreation. The angler's pastime is one of leisurely parts, and the man who cannot smoke with measured puffs and slowly had better put out his pipe Then the angler, as such, ought to be an adept at

"It Is Big with Hope"
ON THE PAPER MILL

musing. The mere act of gazing upon a stream, now tranquil, now fierce, but everflowing till it is lost in the salt sea, suggests it.

There is so much, too, to think about by the water-side, apart from the gentle exercises of the sport, that many anglers, who are credited by the ignorant with selfish desires—such as "snatching" and the employment of questionable lures unseen by a correspondent eye—have no worse motive in their love of [illegible] than a wish to be left alone with their

Need I add that the musing angler acknowledges in his pipe a properly qualified assistant, who asks for no weekly wage, and who only demands to be kept clean to do honest work. A certain eminent angler of several decades ago, recommended the gentleman angler to carry a cigar case, in order by the timely presentation of a Havanna to "natives" whom he met along stream, to impress them with the fact that he was an angler of quality. The world has moved ahead since that patronizing stream study was promulgated and it is now no absolute disgrace to smoke a pipe under certain reasonable and obvious conditions. The blackest old "dudeen" I ever saw was the beloved and well thumbed companion of a reverend gentleman—and a congenial souled angler he was; and I have seen a commercial prince sucking at a shabby briar root that was not worth twenty-five cents. Besides, a cigar is not a convenient article for the sportsman in action. The excitements incidental to his pursuits can only be qualified by something upon which the teeth will take a firm grip; while an eye to economy does not wink at a luxury of which the passing breeze takes the lion's share. When therefore, I talk about puffs from an angler's pipe, I mean pipe and the observer may think what he likes about it. The main point toward which I have been working is

"Too Numerous to Particularize"
AN EEL RIVER CATCH

that the angler is not to be regarded with indifference or criticism because he is a smoker. To this, that, and the other man, tobacco, I am forced to grant, may be all that King James swore it was; the angler, as I have attempted to argue, may smoke and sin not. Sin or no sin, the fact remains that he generally does it.

The angler at home, in the retirement of his sanctum, sees a good deal of sport in the pipe puffs as they curl, ascend and dissipate. No figures dancing in the fire into which the maiden dreamer, with all the world before her, sweetly looks, are more absorbing than those which he watches. They may be more evanescent, but for the moment they are quite as real. Sometimes they recall the past, with its much attempted, its little done; often they are mighty with future possibilities never realized. As the private soldier of France was said to carry the marshal's baton in his knapsack, so the angler's smoke entwines and garnishes that giant rainbow or salmon which time cannot lessen. Charles S. Wheeler, at one of the dinners of the Fly-Casting Club, in the course of a capital speech happily explained why angling is so fascinating. There are reasons "too numerous to particularize," but, amongst others, there is this—it is big with hope, and every angler looks forward to the chance (a very far off chance it is) of proving to an unbelieving generation, that the grand old writer was not propounding an idle conundrum when he asked, "Canst thou draw out leviathan with an hook?"

Many of us have puffed out leviathan from the pipe-bowl, and, after a fearful struggle, safely landed him before he reached the ceiling. There was not, I admit, much to turn out in the frying pan after the contest, yet there was something in the fancy while it lasted. And, indeed, there are many things more unlikely than a twenty-five pound rainbow will be killed some day with a fly, or that a salmon of seventy pounds will be victimized by a spinning bait. Is not such an an achievement—not bloodless, but innocent—worth striving after? Though the big fellows would in all likelihood turn out to be a fraud in the matter of sport, the fame of the exploit would be noised abroad, and the hero would have a clear right to a special epitaph; as, "Here lies Mr. Franklin Bollivar He was a good husband, a kind father, a faithful friend and an ardent sportsman and he caught a seventy pound salmon in the McCloud," or simpler still, "Sacred to the memory of Wattson James, Esq. He landed the record rainbow hooked in the Truckee" —The inscriptions have a most taking look in yonder fast disappearing cloud of smoke, and, as it outspreads aloft, like the folds of a fairy's veil, I behold unborn Waltonian urchins spelling them out, resolving to catch something still bigger or perish in the attempt.

At the festive season of the year there is an all round call upon the imagination. After forty, however, the majority of us do our best angling from the arm-chair, and encourage a fair substitute for the real thing in the whirls and eddies of tobacco, rather than of the rushing river. May the brethern out in upland or on the marsh have a right merry time and sport to their soul's content, making the most of the short day, and livening up the merriment of the home circle by appearing in their midst at a respectable hour to be congratulated and admired. For the rest of us, let us dedicate the incense of one pipe, at least, to the sport we love.

And believe me, of all the angler's memories the best to draw upon are the most far reaching. There never was and never will be fishing to equal that of the boyish days, when the world was as young as yourself, and there was nothing wrong and nothing ugly in all creation. In after years you went down to renew your acquaintance with the brook of auld lang syne winding through the willows and gliding blythely through the meadow where first you heard the rumble of the harvesters—or perchance it may have been the scape of the whetstone on the scythe—and sniffed the odor of new mown hay. In yonder bend near an old stump you caught your first fish. It was a perch, or a sucker, any old thing that swam was worthy of attention. Puff slowly, and, in succession of incident you shall have the whole proceeding repeated before the pipe is done. You softly crept between the willows that morning, and peered enthusiastically in the crystal depths; for, boylike, you wanted something more solid than faith to begin upon. What a lovely sight it was. How the morning sun, after a clear night, glinted on the undulating bodies and never tiring fins of the school of feeding fish you saw; and how you trembled as you made ready to drop the savory "barn yard hackle" into the very center of the party!

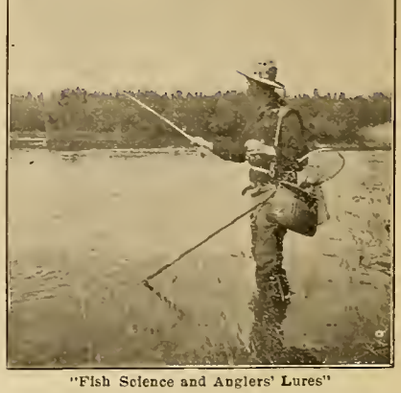
The school was numerous, and the head of every fish appeared to be pointed at some common object of regard, to you invisible. In your nervous condition, the sudden plunge of a huge bullfrog, startled from a nearby bunch of grass on the bank, well nigh frightened you out of your wits; but you soon recovered, tremblingly watched the cork float hoh and then dart under, then with what joy you hoisted your perch high in the air.

Yes, six members of the school were removed one after the other from the crystal pool and strung upon a willow twig through the gaping gills. Talk about ecstasy! why—but enough. If the reader be not an angler he would not understand me, gush I never so strongly; if he be an angler he will understand the Alpha and Omega of it all, without another word.

There was one trifling drawback, you may remember. The fishing in the little brook had been glorious, but it was a stolen pleasure. You slunk home, concealed the rod in the woodshed or barn, and the string of fish in the nasturtiums back of the kitchen. It was quite in the play that the head of the household would take an unfriendly view of your pretty excursion, and your courage had sunk to your boots as you crept into the dining room, sidled into a chair, and tackled your dinner silently but with an appetite unstayed by impending developments which were a bit colored by the torments of an intensified conscience. Think of it when the young scapegrace that now calls you father is in trouble! Certainly you had an uneasy quarter of an hour of it just then—when the rod was impending, with more accuracy than delicacy. But it was the blessed mother who by-and-by brought the sun out of the cloud, and herself superintended the frying of the fugitive perch. That is how you became an angler.

Fish science and angler's lures were unknown to you then and did not disturb your days; there would be, together with other effects, a piece of twine, a bit of putty, a marble or two, and half an apple in your pocket, but no weighing scale, microscope or dissecting knives wherewith to make an autopsy. Nor was the fear of fish wardens or unfriendly farmers before your eyes. It was the pre-dry-fly years, and you were at peace.

But surely that was not the pretty little brook which met your surprised vision from the footbridge when, at length a grown-up angler proud of salmon slain and wily trout killed, you went back to tread



"Fish Science and Anglers' Lures"
AT THE BIG MEADOWS

once more in your boyhood's footsteps? There must be some mistake! This miserable ditch the river which you were wont to compare vaingloriously with the Mississippi, Columbia, Sacramento and Truckee? That rickety plank, the bridge of which Longfellow's midnight musings reminded you, when first you read the poem?

Yea, verily. Such is life. Better had the bearded man stayed at home than shattered thus the superb impressions of the jacketed boy. Why did you not keep them as a stock in trade for the Xmas smoke? I repeat—such is life.

At least, my own pipe is nearly out, and many of the matters upon which when I began, I intended to discant must stand over. There is a great fish head, like Poe's bust of Pallas, just above my chamber door; and another at each corner of the bookcase cornice. There are broken rod tips, and battered flies, specimens in spirits, and specimens dry; there are hooks, lines, landing nets, and gaffs, with a story to each that, by the aid of a modicum of friendly color, might be made to read passing well. Alas! I have frittered away my opportunity. Is it possible that smoking is after all not altogether perfection, and that it has a tendency to produce garrulity, as cynics say angling does?

At this festive season (the dear old phrase will come) we may ignore any such disloyal hints from an evil spirit, I ask pardon for the untold stories, at the same time believing that the reader may possibly have had a narrow escape, and should be congratulated, not pitied. Be that as it may, the pipe is smoked; and I find that the knocked out ashes, are just enough, by economy in use, the adoption of plain letters without flourishes and the assistance of a small disgorger; to inscribe to one and all "A Happy New Year"

Chicago Tournament Rods.

While club members are quite likely to influence one another in the selection of sports accessories, with the result that all come to be more or less alike in time, still men are always found whose likes and dislikes are very marked, and who select their rods and reels and lines without regard to what this or that fellow club member swears by. We think, therefore, that the following summary of the rods and reels employed by the contestants—members and visitors alike—in the recent bait-casting contest held by the Chicago Fly-casting Club, will prove interesting. If for no other reason, it shows that 33 out of 34 persons who entered the distance and accuracy event employed rods ranging in length from 5 feet to 6 feet 9 inches only and a single rod less than 5 feet in length was used. About half of the entrants were visitors, some from distant cities, which shows that local influence alone did not account for the uniformity in rods.

Eleven entrants used rods 6 feet 6 inches to 6 feet 9 inches in length.

Nine others had rods 6 feet 1 inch to 6 feet 3 inches in length.

There were seven rods 6 feet 3 to 6 feet 6 inches long.

Three others were 5 to 5½ feet in length and an equal number between 5½ and 6 feet. One was under 5 feet —4 feet 10 inches.

The weights follow:

Twenty one of the total number of rods ranged from 5½ to 6½ ounces in weight. They were equally divided 7 of them weighing 5½ ounces, 7 of 6 ounces and 7 of 6½ ounces.

Five-ounce rods came next, five of that weight being employed.

An equal number of 7 and 7½ ounce rods were used, 3 of each, while the two Bristol steel rods weighed 8½ ounces each.

The amateur rodmakers were in evidence here as elsewhere, as will be seen below. There were 19 factory made split bamboo rods and six of the same type that had been made by their owners. Three of the wood rods were factory-made and three were made by their owners, as also was the single whole cane rod employed. The two Bristols completed the number.

There was almost equal uniformity in the matter of reels, although so many different makes were used

"Canst Thou Draw Out Leviathan with an Hook?"
THE END OF "BIG MIKE"

that mention of them is omitted, as are the names of the professional rodmakers, save in the following paragraph:

The best cast in the long distance event was 144 feet 4 inches, made by E. Bartholomew with the shortest rod entered, a wood rod made in Kalamazoo, weight 5 ounces, length 4 feet 10 inches. John Hohmann, who was second, made his own rod and cast 133 feet 8 inches with it. Its length is 6 feet 2¾ inches and the weight 5 ounces. Material, split bamboo. C. B. Kelsey, third man, used a 6-foot 5-ounce Leonard split bamboo rod and cast 131 feet 8 inches. Half-ounce rubber frogs were used in this event. All casts were from the reel.

GOOD FISHING IN EEL RIVER.

The string of steelheads and salmon shown in the halftone were caught by Mr. Chas. L. Griffiths of this city during an angling trip to Eel river this year. The catch ran in weight from two and a half to thirty-six pounds and was taken in Grizzly pool near Weymouth's.

Talks to Dog Owners.

SELECTING A BREED.

Having erected his kennel and provided the necessary appliances, the prospective dog breeder will have to decide finally what variety it shall be that will command his patronage. Very probably he has already made up his mind upon the subject; indeed, he ought to have done so before the arrangements of his kennel were completed, as different breeds require different housing, so far as benching and one or two other minor items are concerned. Still, whilst the building and other arrangements are still in course of progress, there is always time for changing one's mind, but it becomes another matter all the preparations are concluded and the establishment is only waiting for tenants to come and occupy it.

Almost everything will eventually depend, so far as ultimate success is concerned, upon the wisdom of the beginner's choice; for though it is a hard thing to say,

"Angling Is So Fascinating"
ON THE McCLOUD

and the doing so may possibly deter a young enthusiast from entering the Fancy, it is no use a man deciding to take up a breed of dogs if that breed happens to be one that he cannot do justice to. For instance, delicate breeds will not thrive in outside kennels; whilst some varieties will require an amount of space which it is impossible to supply them with. Again, a man may center his affections upon a breed which requires so much attention that his business engagements would ensure his neglecting it; or perhaps it may happen that he possesses a predilection in favor of a variety which is so rare that it is hopeless for him to expect that he can supply himself with good specimens thereof. All these are considerations which should weigh heavily with the man who intends to succeed in dog-keeping, and most particularly may it once more be impressed upon him that if he starts with badly-bred or chance-bred animals his prospects of ultimate success are immeasurably decreased. It is therefore better, far better, for the beginner to commence with one good dog of high pedigree, than with half a dozen mediocrities, and in his own interests it is to be hoped that the novice will lay this advice to heart.

In putting to himself the question, "What breed shall I keep?" the beginner will display wisdom if he permits his admiration for a particular breed to become subordinate to the condition of his exchequer. Some breeds are, from their size or rarity, or some other reasons far more expensive to buy and feed than others are, and consequently may at the outset be above the means of the beginner. If so, he had better avoid them until he has gained experience, and has convinced himself that he is capable of paying a proper amount of attention to his kennel; and then he may be justified in making an outlay which would have been a rash one at the start.

HIGH-PRICED VERSUS CHEAP DOGS.

No doubt, when they are in experienced hands, the high-priced varieties pay better than those which realize small sums even if the good specimens are disposed of. They cost very little, if anything, more to keep, and although the capital invested in them is, of course, greater than in the case of less popular or less rare breeds, the profits upon sales are proportionately more. It is, moreover, an undoubted fact when the public know that long prices are realized by a breed, rich people become attracted to it and purchase freely because the variety is temporarily fashionable. Breeders, some of them at all events, know this perfectly well, and hence the tall figures at which some crack dogs are reported to change hands. Some of the transactions, no doubt, are perfectly *bona fide*, but it is equally certain that in others the stories of sales are absolutely unreliable, but in either instance a particular breed has benefited by the inflation of prices.

THE POPULARITY OF THE TERRIER.

Beyond all possibility of contradiction, the Terrier family is the most popular of all dogs; and it is not in the least surprising that it should be so, for, whatever its particular variety may be, the Terrier is a dog which must appeal forcibly to men and women of all ages. If an active dog is required to follow a vehicle or bicycle, there is the Fox Terrier, the Irish Terrier, the Airedale and the Welsh Terrier to draw upon; and all of these varieties, unless they have become enervated by luxury, and pampering, are to be relied upon for a day's sport with vermin. The Scottish Terrier, the Dandie Dinmont, and the Skye, being all so short upon the leg, can scarcely be regarded as fitting companions for the equestrian or cyclist; but they are dead game, as hard as nails, and altogether excellent for the society of people who walk. The Bull Terrier is, or should be, if he is to be regarded as being worth a straw, the incarnation of canine courage, and the Bedlington is also a wonderfully plucky dog, but both varieties, as a rule, though there are, of course, exceptions, are rather too hot-tempered and impulsive to be regarded as quite reliable breeds to be granted their freedom; and lastly come the black and tan and the white English Terriers, two lovely breeds, a little delicate in constitution, maybe, when compared with some of the others above named, but well worth the attention and support of those who love a handsome, active Terrier.

THE LARGE BREEDS.

It is not surprising that the popularity of the large varieties of dog is not so great as that of the smaller ones, as they not only consume far more food, which causes expense and also trouble to prepare, but they require a good deal of space, and, as will be shown later on, require more time to be devoted to the duty of exercising them. On the other hand, provided that a big dog is well-proportioned, sound on his legs, and active, which is not by any means the invariable rule, then he is likely to be a saleable animal, for there always seem to be people about who enjoy the society of a great, fine dog, whilst even the more or less crippled representatives of an imposing-looking breed are in some sort of demand as the guardians of houses and property in general. Consequently, it is a mistake to imagine, that the big dogs are unsaleable or unprofitable, provided that they are good of their sort; and beyond all doubt there is a good demand for Great Danes, Newfoundlands, St. Bernards, Irish Wolfhounds, Deerhounds, and Borzois, amongst the public. On the other hand, the star of the Mastiff, one of the noblest of the British breeds, has been for some time on the descendent; whilst the popular but entirely erroneous belief that the Bloodhound is a ferocious monster has not conduced to the popularity of a variety which is well worthy of the support of dog lovers.

SOME POPULAR MIDDLE-WEIGHT VARIETIES.

The Collie and the Bulldog are the two medium-sized breeds which are in most request, the former appealing most strongly to the actively-constitutioned individual, and the latter to the person of sedentary habits, as the Bulldogs is not exactly the sort of dog that is cut out as a companion for a country ramble, though he is a much maligned animal, and, as far as disposition goes, he, as a rule, can be compared favorably with many breeds which bear a better reputation for good temper. The Dalmatian, for some unknown reason, has never received justice at the hands of dog lovers, but this is a dog that is worthy of attention from those who are indifferent as to whether their kennels pay them or not; whilst the Poodle is another variety that has never been common in England, and though long prices may now and then be received for first-rate specimens, his value is as nothing compared with that of a Collie or a Bulldog.

SPORTING DOGS.

Regarded from an exhibitor's point of view and that is the only one that can be considered in the course of this paper—for the subject of field dogs is far too wide to be touched upon now—the most

"Every Angler Looks Forward to the Chance"
STRIPED BASS FISHING ON SAN ANTONE SLOUGH

popular and therefore the most valuable varieties for the beginner to devote attention to are Retrievers, especially the flat-coated ones, Field Spaniels and Cocker Spaniels. Pointers and English Setters are in fair demand, but Irish Setters and Greyhounds are seldom large classes, whilst anything like a strong class of Gordon Setters is an extraordinary occurance. —*English Stock-Keeper.*

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

Senator P. Dead.

We are sure all sportsmen who love a good Pointer will regret to hear of Mr. J. W. Flynn's hard luck in the death of that sterling good field trial performer and excellent worker to the gun, Senator P. A dispatch received by Mr. Flynn this week apprised him of his loss, and, as if to bear out the old adage "it never rains but it pours" he had in his pocket a letter, in which the writer offered to purchase Senator P., for $1500, the offer was not old enough to have cooled off the warm enthusiasm of owning a crack Pointer that would tempt an offer for that amount.

Senator was in charge of and handled by George E. Gray of Bruceville, Ind. The immediate cause of the great Pointer's death was an abscess in his ear which finally developed into blood poisoning. The primary cause of the abscess was a cold. Senator's sire was Cap. B. (Ch. Glenbeigh ex Sall II, she by Bragg IV out of Forest Queen and bred by J. J. Pollock, Scotland. Cap B. was bred by John F. Hughes, a familiar figure at many Coast field trials. Queen P., Senator's dam, was by Honest John out of Romp P. John was bred by Clarence A. Haight and by Dick H., out of Lady Max. Romp P. was owned by T. J. Pinder and was by Ch. Sensation out of Seph G, two Pointers thought much of by the sportsmen of two decades ago.

Senator P. was not only a high class field trial performer but was also a bench winner. His first field trial efforts were in the Coast trials of 1899, when he won second All Age and first place in the Championship Stake. His bench wins that year were: San Francisco, reserve novice, first limit and second open. Among his notable Eastern performances was a first in the Manitoba Champion Stake. He was whelped June 6, 1897, and has a good record as a producing sire. He had been booked for a number of services to Eastern bitches and was in good demand by owners of high class Pointer bitches.

DOINGS IN DOGDOM.

MANY CHAMPIONS.

In his report to the A. K. C. meeting, December 14th, Secretary A. P. Vredenburgh states:

"It may be interesting to know the number of champions that have been made during the present year. We have recorded and sent medals to 92 and there are now on file applications for 15 additional ones, making a total of 109 champions for the year 1904.

"From this record it is but a fair inference that the title of champion can not carry with it the importance that it should demand, and I would therefore submit that it might be well to again consider this much-vexed question."

SEATTLE KENNEL CLUB WON.

According to the *Post-Intelligencer* the seceding faction of the Seattle K. C. have been ousted in their fight against the old club.

In the Superior Court on the 20th inst Judge Hatch, after hearing the testimony of both parties to the suit, rendered a decision restoring to the Seattle Kennel Club its name, property and the right to continue in existence, holding that the attempted dissolution of the club by the faction which seceded in May last was unlawful. The court further held that by the passage of the resolution attempting to dissolve the club the faction which seceded had shown themselves antagonistic to the old club's interests and that they are no longer members of it.

The faction which, after the attempted dissolution, filed articles of incorporation for a so-called "Seattle Kennel Club, Incorporated," was permanently enjoined from in any way interfering with the old club or claiming membership in it.

Preliminary to the decision on the merits, the court dissolved the restraining order, sued out by the seceding faction, in an attempt to prevent the club

R. M. DODGE'S STELLA II

from holding its annual election scheduled for Wednesday night, December 14th. After the dissolution of the order and prior to the hearing of the case in chief the club met in the office of President Riplinger and elected officers for the ensuing year. The decision rendered by Judge Hatch brings to an end the litigation, leaving the old club in undisputed possession of the field

At the trial President Riplinger, J. Redelsheimer, C. B. Yandell and other officials of the club testified as to the manner in which it was attempted to capture the organization by notifying only a portion of the members of the intended meeting at which the resolution dissolving the club was put through. Testimony was adduced to the effect that J. M. E. Atkinson and other veteran members of the club were denied the right to pay their dues by the secretary, acting under instructions from the faction which packed the meeting, and therefore deprived of a right to participate in the proceedings. Several witnesses also testified that, though members in good standing, they received no notices of the intended meeting. President Riplinger swore that the notices were sent out without his authority or previous knowledge.

Following are the officers elected by the club for the ensuing year: President John W Riplinger; vice-presidents, C. B. Blethen and J. P. Parkinson; secretary, W. J. J. Roberts; treasurer, J. M. E. Atkinson; members of committee on bench show, R. A. Swift, Julius Redelsheimer, N. A. Wedeen, H. C. Bromley and C. B. Yandell.

A NOTED SETTER DEAD.

The English Setter Ch. Rumney Rock owned by Mr. C. Houlker, died recently. Rock was one of a noted litter of five bred Mr. Gunn of Cardiff, England. The quintette of puppies nearly all turned out well and were big winners on the bench. Rock was a success as a producing sire. An offer of $1500 was refused for him, by Mrs. Hopkins, his prior owner East.

SPOTS TO THE FRONT.

Dalmatians are coming to the front rapidly in the East. The Windy Valley Kennels have started with some 20 dogs and have several good ones begun from

"This Noble Creature in Departed Years,
Rang'd Free the Northern Regions of the Land."
HEAD OF MOOSE SHOT BY ALEX HAMILTON IN BRITISH COLUMBIA

the other side. Mr. J. B. Thomas, Jr, and Mr. H. T. Peters have formed a co partnership and started the kennels above named.

FIELD AND FANCY SUPPLEMENT.

We must congratulate our New York contemporary on the handsome appearance of and interesting data contained in the first annual Christmas supplement of Field and Fancy. The eighty pages are full of good things for all fanciers of the dog and illustrated with 150 elegant half tones—portraits of many of America's leading fanciers and pictures of some of the best dogs of all breeds in the country.

A Good Powder Made Better.

The Laflin & Rand Powder Co. has never been content to let "well enough" alone. Because a certain powder has given universal satisfaction in the past is no reason why a better powder should not be placed on the market.

"E. C. No. 1" and "New E. C." were excellent powders. "New E. C. (Improved)" is a better powder than either of them or than both of them combined. All their good characteristics have been preserved, added to and improved. In fact, judging from exhaustive tests the Laflin & Rand Powder Co. believe that no better—if as good—bulk powder can be made. The regularity of "New E. C. (Improved)" is something wonderful; there is no residue or unburned grains; while the velocity is high the pattern is absolutely regular; owing to its hardness of grain it is not affected by ordinary variations of pressure when wads are seated; it positively will not pit the gun barrel. These are strong claims, but they can be borne out by trying the new powder "New E. C. (Improved)."

A Trapshooters' Organization.

An organization of the trapshooting fraternity under one general fountain head has often been advocated—movements to that end in view have from time to time been made but not as yet with any great degree of success. There are, however, organizations that have a membership of a majority of the gun clubs of a State or several states; these bodies, while of great benefit in themselves are of comparative local or territorial importance. What is aimed at, and desired, is an amalgamation of the shotgun enthusiasts of the whole country, including Canada and the British Provinces.

The following copy of a circular letter was handed to us by a local sportsman who was so favorably impressed with the plan outlined that at his suggestion we publish the same without further comment than that full information concerning the matter may be obtained of Mr. Charles G. Blandford of the Ossining Gun Club, Ossining-on-the-Hudson, New York:

"We are organizing an association of trapshooters and have met with such success that we have resolved to introduce our society through the United States and Canada.

The reasons and objects of this move can be briefly explained as follows: It has been our experience, and it is the opinion of every trapshooter we have come in contact with, that there should be a closer relationship between trapshooters. This can only be accomplished by adopting an emblem which can be readily recognized.

We, most of us, dislike to decorate ourselves with emblems of orders we are associated with, but what shooter would object to wearing this emblem? A small gold shotgun with a tiny beetle (bug) hanging pendent from the barrel. This is the emblem of the 'Gun Bugs Association of the United States and Canada.' The gun has a strong pin fastened to it, so that it can be used as a scarf pin or stuck on the lapel of the coat.

In attending out of town tournaments, we have all had the experience of being alone in some large hotel or in some station or train and wondering if there was some other trapshooter around so we could break the monotony and talk 'shop' awhile. What a welcome sight one of these gold guns would be at such a time.

We want to enroll 25,000 members in the United States and Canada. By ordering a large quantity of the emblems we are enabled to sell them at $3 for the solid gold, and $1 for heavy rolled gold plate. Five cents extra for postage charges. This price is slightly in excess of cost to cover the expense of the great correspondence we have entered into and for the dies which have been made.

We insist on the following qualifications: Every member must belong to a regularly organized gun club and must have a club average at flying targets of 50% or better."

GOSSIP FOR SPORTSMEN.

TRAP SHOOTING IN ARCTIC WEATHER.

The program for a team race between the well-known "Mallory Squad" of Parkersburg, W. Va., and Bradford, Pa, and the equally well known "Du Pont Squad" of Wilmington, Del., was carried out at the Country Club grounds near Wilmington, Del., recently despite weather conditions which made perfect shooting an impossibility. The "Mallory Squad" composed of Messrs. F. E. and S. T. and J. F. Mallory of Parkersburg, and L. E. Sr., and L. E. Mallory, Jr., of Bradford, Pa., were accompanied by Mr Standcliff of Parkersburg and Mr. Pringle of Bradford, the party being en route to their shooting preserve at Revels Island, Accomac county, Virginia. The "Du Pont Squad" was as usual: Eugene, Alexis I., Eugene E., Victor, Jr., and Victor III. It was necessary to wade through huge drifts of snow to reach the house and shooting platform, and a 20-miles-an-hour blizzard made target shooting strenuous. So cold was it, referee and scorer had to be changed several times during the team race. Elmer E. Shaner, secretary-manager of the Interstate Association, was official referee. He was "spelled" by Luther J Squier and other shooters.

Despite the conditions J. F. Mallory and L. E. Mallory, Jr., scored 48 and 45 respectively, really phenomenal scores when everything is taken into consideration. Under ordinary circumstances F. E. and S. T. Mallory are good for 47 or 48, and that they got but 30 each can not be counted against them.

The "Du Pont Squad," while defeated was not disgraced by any means, a beat of fifteen targets in 250 is but small margin especially so when the high class form of their opponents is considered. The race was shot in three events—15, 15 and 25 targets each, respectively. The scores were:

Mallory Squad—J. F. Mallory 48, L. E. Mallory, Jr., 45, L. E. Mallory, Sr., 31, F. E. Mallory 30 and S. T. Mallory 30; total 184.

Du Pont Squad—Eugene Du Pont 36, Alexis I. Du Pont 36, Eugene E Du Pont 35, Victor Du Pont, Jr., 32, and Victor Du Pont III 30; total 169.

Prior to the shoot Messrs. Mallory and Messrs. Pringle and Standcliff were entertained at lunch at the Wilmington Club, and were later driven out to Country Club's grounds. After the shoot a dinner was given at the clubhouse by the DuPont Squad in honor of their guests, covers being laid for sixteen. In addition to the party of seven mentioned above, Elmer E. Shaner of Pittsburg, Pa., Messrs. Eugene and Alexis I DuPont, and Messrs. J. T. Skelly, W. M. Foord, Luther J. Squier, Duncan Bruce, Edward Banks and Lieutenant Jere G. Ewing were present. After dinner the party returned to the city in a sleigh, the Messrs. Mallory and party, accompanied by Eugene DuPont, Skelly and Squier, leaving for their Revels Island clubhouse.

In connection with the visit of the Mallory Squad to the Country Club's grounds, the members of the Du-Pont Squad presented a handsome stein to be competed for by members of the Mallory Squad under handicap conditions, the Messrs. Mallory to bandicap themselves. J. F. Mallory's magnificent total of 48 out of 50 made under such extremely hard conditions, deservedly won for him the souvenir of his first visit to Wilmington, but L. E. Mallory Jr. was a very close second with 45.

MARSH HUNTING HAS BEEN GOOD.

Duck shooting for the past week has been generally good in almost every hunting section frequented by local sportsmen. The rains last week were not heavy enough to cause the anticipated pilgrimage of the birds to the overflowed stubble fields and puddles. The heavy southeaster which began yesterday, will, it is believed materially change the status of shooting conditions.

Canvasbacks and bluebills are now plentiful along the San Pablo and Susisun bay waters and many limit bags have been secured.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

THE FARM.

The Making of a Dairy Herd.

The first thing is to find out, then, which cows are worth keeping and which are not. Nobody can run any business successfully unless he knows the relation of cost of production to the price received or the product. Guesswork will not do n dairying any more than it will in manufacturing. Therefore, let the farmer discard the plainly inferior producers, feed the rest well for a year, and keep an approximately correct record of the milk and butter fat yielded by each cow, and of the food consumed by each. The results are pretty sure to he surprising.

The majority of farmers consider it too much trouble to keep milk records. Not so the Danes, who are our keenest competitors in the world's markets, so far as dairy products and bacon are concerned. The little kingdom of Denmark has about three hundred farmers' co-operative testing associations, which are doing a great deal to develop the capacity of the Danish dairy cow, and to reduce the cost of milk production. In these associations the milk of each cow is weighed one day per week, and the milk tested for butter fat fortnightly or monthly. In this way it is easy to get an estimate of the year's production which is quite close enough for practical purposes. The feed of each cow is also weighed sufficiently often to get a rough business estimate of the cost for a year. With a spring balance hanging at a convenient point in the stable, and a pencil and sheet of paper beside it, this method of keeping records requires so little time and trouble that no progressive dairyman can afford to neglect it.

The economical production of large quantities of milk, butter or cheese determines the value of the cow, and if she does not yield a profitable flow of milk she ceases to have any reason for existence. By the simple method of testing outlined above the farmer will he able at the end of a year to weed out his poor milkers and retain the best as the basis of the new herd. No man can select the most profitable producers from his neighbor's herd without using the scales and tester, nor can he often get the privilege of buying another man's best cows. Hence, it follows that to build up a high class dairy herd it will usually he necessary for the farmer to breed his own cows.

The improvement of the herd will depend chiefly upon the sort of bulls used. The most expert judge is largely at sea when he attempts to select a dairy bull by appearances alone. When we come to the question of raising good cows, we find that the only road to success is in breeding from cows of known capacity, and from bulls whose female ancestors have been tested for excellence at the pail and churn. It is imperative that the herd bull be backed up by a considerable number of good producing dams and grandams, if satisfactory results are to he expected from his daughters.

A good cow is a good cow, no matter what her breed may be. Therefore, let the farmer choose the dairy breed that he considers best suited to his conditions, and stick to it Let him breed his selected cows to the best available bull of that breed, and continue to grade up his herd to a higher degree of excellence year by year. The practice followed by some farmers of using bulls first of one breed and then of another is fatal to all plans for building up a uniform, handsome and profitable herd of grade cows, and that is just what most farmers require. It was breeding with a purpose in view that enabled the late E. D Tilson of Ontario to build up a working herd of dairy cows that was probably unequaled in Canada One of his grade cows produced 20,132 pounds of milk in a year; five others gave from 13,000 pounds to 16,582 pounds and the whole herd of sixty-five cows made a yearly average of nearly 10,000 pounds

Even with the utmost care in breeding, a herd cannot he made profitable without good feeding and careful weeding out of the inferior animals. The dairy heifers should he kept in a good, thrifty, growing condition, but not too fat. If they are bred to drop their first calves at from twenty-four to thirty months old, they are not likely to develop a tendency to make beef rather than milk. If there seems a danger of deterioration in size through this early breeding of the heifers, it is better to give them a long rest after the first milking period than to allow them to reach the age of three years before calving.—*Holstein Friesan Register.*

Warranted to Give Satisfaction.

Gombault's

Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1 50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O

Chopped Alfalfa for Cattle.

From personal experience in six years in feeding from fifteen hundred to two thousand head of cattle each season and from as careful and accurate figuring as possible, we find a clear saving or gain of twenty-five per cent from feeding chopped hay. Not that a steer will eat twenty-five per cent less but that while the wastage is comparatively nothing, merely nominal, the animal will consume somewhat less and gain much more rapidly in weight on the chopped than on the long hay. Long hay is usually fed in racks to prevent wastage, the steer must place its head and neck in an unnatural position, reaching upwards to pull each mouthful of hay from the rack which is strenuous work. In so doing it is very apt to get dust and hay seed in the eyes, making the animal cross and irritable and while in that mood the largest or boss steers will hook and drive the smaller and weaker ones away from the feed.

With moistened chopped hay fed in troughs, the animal eating with its head in natural position, no dust or hay seeds get in its eyes to irritate, the food is partially masticated by being chopped and in the best possible condition for easy digestion. A steer will quietly and contentedly eat its fill and not molest the weaker or smaller neighbors and then go quietly away and lay down till the next meal. We chop an average of over fifty-five tons of alfalfa hay daily at an extra expense, including everything of a fraction less than thirty-five cents a ton over the cost of ricking it as long hay. We use what is known as the Ross cutter of extra size—thirty-six inches—and run it with a fifteen horse power engine mounted on wheels. Twelve horse-power, however, would he ample.

We cure our alfalfa in the cock, hauling it when properly cured direct from the fields to the chopper, or growler as the men call it, where it is cut to the desired length, then carried by the conveyors connected with the chopper to the center of the rick. With little placing we make a compact rick and two and a half tons of chopped hay will go into the same space as one ton of long hay. These ricks when topped out are almost impervious to water. We have never had the slightest trouble in keeping the hay, although chopped and ricked direct from the field In feeding we use a large platform with runners underneath alongside the rick on which we pull down whatever quantity of hay is desired for a feed, moistening it well with water through a hose to soften it before hauling it in box wagons to the feed troughs in the corrals. We find that the expense of feeding out the chopped hay averages about fifteen cents a ton less than long hay. We feed our beef steers with regularity—twice each day, in the morning and afternoon.

The hay fed in the morning having been moistened the evening before becomes soft, palatable and easy of digestion. Immediately after feeding in the early morning we moisten the hay for the afternoon feed. Whenever grain, dry ground barley or mill feed can he obtained at a reasonable figure we find it advantageous to mix three or four pounds daily for each head with the chopped hay for four or five weeks prior to placing the cattle on the market and we get return not only in the increased gain in weight but also in the improved quality and hardness of the beef—making the cattle rank as grain fed. Anyone raising any considerable amount of alfalfa hay engaged in the business of feeding beef steers, after trying the use of chopped feed will never revert again to the feeding of long hay.—*L. M. Foulke.*

Raising Fine Bred Hogs in California

[Charles D. Pierce in "For California."]

I consider raising good pigs one of the valuable adjuncts of the dairy business today in California. In other words, hog-raising here is, in my opinion, a "gilt-edge" proposition when taken in connection with the dairy business. At any rate, it is as sure cash as perhaps any other industry that I know of. The two leading breeds, I think, are Berkshire and Poland China, in the order named, but of course every one to his taste.

No product today in California grows into money faster than pigs. Our stock comes into maturity very early. California pigs have their young in the spring and fall, and it is safe to say that they have from eight to ten young on an average.

I calculate that they grow a pound a day. When a pig is six months old he should weigh 200 pounds, which is better than a pound a day. I have a boar that weighed 650 pounds at fourteen months old. A preferable weight for killing in California is from 180 to 225 pounds. Hogs of this weight seem to bring a better price and seem to be more desired by the butchers and by the public generally.

I feed my hogs mostly skim milk, with a little mill feed, corn, pumpkins, etc. Skim milk has a great value when it is turned into pork. It is the pig that makes it valuable, because unless fed to hogs one does not get much out of skim milk as a by-product.

I cannot urge too strongly the desirability of raising a good variety of stock. It costs so little to keep good stock and it is cheaper in the end. Indeed, the profit is many times greater. Thoroughbred pigs probably bring three times as much as those raised purely for the market, and yet there is big money in raising good stock for the market. It doesn't cost any more to feed a good pig than a poor pig. If you have a very scrawny, poor-bred hog, he will probably consume more food than the better-bred animal, and will not fatten so rapidly, as he does not assimilate his food as well as the thoroughbred hog.

On our Riverside dairy ranch we raise fodder corn. In the fall we let the cows in on the corn fields and they trample it down. The pigs are then turned in the field or the stubble is hauled in to them, and they eat it up clean. We do not allow our pigs to graze at large, as they fatten more rapidly when reasonably confined. Many, however, let their hogs graze on alfalfa and find it a splendid forage. Though hogs can live in the open the year round in California, it is better to provide shade for them in summer, although their quarters need not be boarded up on all sides. The hot sun of some of the interior valleys is apt to make a big, fat pig uncomfortable.

Climatic conditions in California make hog-raising desirable. One can raise feed for them at all times of the year and they are not called upon to resist the bitter cold of the East.

Pure Bred Sires for Beef Herd.

Every breeder of live stock has two great battles on hand. One of these is the battle for improvement, and the other is the greater battle against the deterioration of his herd. Many cattle breeders seem to feel that when they have become possessed of a pedigreed bull their success as breeders is assured, says Kansas *Farmer*. They fail to realize the fact that a pedigree does not make a bull.

A pedigree is only the written assurance that the ancestors of the animal have done well under proper care and a promise that he will do well if rightly handled. With a pedigree the chances of the animal proving himself a good one are excellent, though not absolute. Without a pedigree it is mere guesswork

There are many unregistered bulls that are good individuals, but a crop of their calves shows the weak points in their ancestry, while their continued use is sure to result in the deterioration of the herd. A pure bred bull that is a good individual means not only an assurance of victory in the fight against deterioration, but is a powerful instrument in the hands of the breeder in his battle for improvement.

While it may sometimes be necessary to outcross cattle for the sake of adding certain desirable points. It should never be permissible to crossbreed them, and a scrub bull should never exist. Even a poor steer is much more valuable than a poor bull because he cannot injure the herd.

In an article in *Breeders Gazette* on judging cattle W. A. Harris says of the head of the herd:

The head broad, strong, powerful, curled like the front of Jove, with horns of power, firm based and curved in beauty; eyes full and bright, yet mildly beaming; ears large, well haired and richly colored, nose straight and full, lips large and round and firm. All these things go to make up an embodiment of power, strength, constitution and beauty that is worthy to wear a crown. The neck that carries this masterpiece must be a tower of strength, with a full high crest, clean throated and curving into the great broad chest, with its full, deep, rounded brisket, all of which must show that within are mighty vital organs that in a great flood tide supply the streams of life. What great and powerful forearms, wide wide apart! How strong and round and smooth are the shanks! How firmly placed large and even are the hoofs which support the mighty carcass! The shoulders, the ribs and the thighs all form mighty triple arches and are tied together by a great, firm girder in the back; straight as a die and from end to end covered everywhere evenly, smoothly and deeply with flesh and mellow hide and rich, soft hair.

STOP THE LEAK.

A horse is only good for use or sale when he is sound. **Spavins, Ringbones, Curbs, Splints** and other forms of lameness are leaks which may be stopped by using

Kendall's Spavin Cure

Chase City, Va., Dec. 11, 1903.

Dr. B. J. Kendall Co., Enosburg Falls, Vt.

Gentlemen—After trying many different kinds of liniments a friend advised me to use your **Kendall's Spavin Cure**, which gave a **complete cure at once.**

Respectfully yours, McCARY L. WALKER.

Price, $1; six for $5. Ask your druggist for **KENDALL'S SPAVIN CURE**, also "A Treatise on the Horse," the book free, or address

DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

Horses' Hoofs and Shoeing.

By F. C. Grenside, V. S.

Like many other subjects that appertain to horseflesh there is a wide diversity of opinion as to the treatment of the horse's hoof, particularly that phase of it which has to do with shoeing. In some parts of this country there is a deeply rooted prejudice in favor of allowing the hoof to grow out to very considerable proportions. If you ask some of the strong advocates of this practice their reason for it you get the time-honored answer that they like to see a [illegible] foot. The question, then, naturally arises: Does a luxuriant growth of horn constitute a good foot and is a long hoof conducive to the welfare of the foot and that portion of the extremity above it.

There is no doubt that you can take liberties with horses' hoof with impunity under some circumstances, but if you want a horse to do every-day work the nearer you get a hoof to its proper dimensions the better for the foot and the leg above. For every-day work the hoof should be kept of dimensions so that every part of the lower surface of it bears its proportionate amount of weight and so that there shall be no disturbance in the proper relations of the various parts that make up the legs and feet. Dealers keep their horses' toes long because length of toes in reases their action; a horse with long toes is found to exert more muscular force in order to raise his feet off the ground and extend them in progression, consequently his action is increased. As they do not work their horses hard, but merely give them exercise enough to keep them well mannered to show to their customers, they do not as a rule experience the ill results they would if they were worked fairly hard. The same remarks apply to harness show horses, that are simply kept in condition to show all the style and action possible. Everyday work, however, is another matter. The dealer and showman are right from their standpoint, but not from the standpoint of the owner, who is looking for every-day service.

Too long a toe acts as a level and very much increases the tension of the tendons and ligaments that support the fetlock, consequently rendering them liable to strain and also increasing the tendency toward galls. Too long a toe is also a fertile cause of corns, as it increases very much the pressure on the heels and consequent liability to bruise the quick of the foot at that place, which constitutes a corn. In addition to the toes being left too long the heels are allowed to grow down, taking all the pressure off the frog. Nature intended the frog to bear its proper proportion of weight and if it does not do so it shrinks, the heels contract and the inner quarter curls in and acts as a wedge between the shoe and the quick, thereby acting as another cause of corns. Too long a hoof hastens fatigue, as the increased exertion necessary in raising and advancing the foot in progression augments the expenditure of force. The tendency to interfere is also much increased.

The prejudice in favor of keeping the hoofs long has been brought about and encouraged by the example and expressed opinions of dealers in a large measure. A dealer sells a horse with long hoofs and the purchaser sends him to the forge. The shoer, unless he has been otherwise definitely instructed and if he understands what is best for the legs and feet, will reduce the hoofs to their normal proportions. When the owner drives or rides his new purchase again he finds the action curtailed and thinks the horse is gone sore. He applies to the seller of the horse, who tells him that he has had his feet cut away so much that it has made him sore. This might be the case in exceptional instances, but very rarely. In addition to the reduction of the hoofs in size the shoes may be lightened, which further lessens the action. What are called green horses are very apt to go sore if put abruptly into work, from the fact that their tissues have not been hardened by degrees for work, or, in other words, they are not in condition, and it will take some weeks before they can safely be put into anything like hard work with impunity.

After reading the foregoing it will naturally be asked: What is the guide in determining the dimensions to which the hoof should be reduced at the time of shoeing? The practiced eye of the man who understands the natural poise of the horse's leg can determine at a glance how much to reduce the hoof in order that every part of the leg and foot will approximately bear its due proportion of weight. The direction of the line of weight in the extremities varies in different individuals, and Nature can be assisted to a measure in regulating the direction of this line in order that no part shall be unduly taxed. The horse with the straight pastern and high heel is apt to suffer from the ill effects of concussion, while the oblique-pastered horse is more likely to suffer from strain. The ill consequences of the defects of formation can be materialized in a measure by regulating the length of hoof according to circumstances. For instance, the disadvantage of long and oblique pasterns can be overcome in a measure by keeping the hoofs shortened up as much as possible, thereby reducing the tension of the supporting agents of the fetlock. In the same way the elasticity of tread can be promoted in a straight-pastered horse by reasonable length of toe.

Shortness of pastern in front supplies compensations for shortness of forearm. In the fore extremity the oblique shoulder, long arm and forearm and smooth flexion of the joints may in a measure counteract the [illegible] of calf knee and unduly short cannon bone. Added to this there may be that lightness of step with which some horses are endowed that tends to diminish the jarring cause by the nervous [illegible] horse's foot. Planting, who is a justly celebrated authority on horse-shoeing, gives as a rule to determine the amount a horse's hoof should be reduced at the time of shoeing that the hoof should be rasped by the rasp until it is flush with what is called the "white line." The "white line" is that portion of the hoof that forms the connecting medium between the outer margin of the sole and the inner and lower margin of the wall. Its outline is very clearly defined in a freshly rasped hoof. Fleming doubtless assuming that the sole and white line have not been reduced with the knife, but have been allowed to remain as nature intended them, of their normal thickness.

Just here it may be remarked that the practice of paring away the sole of the foot or, in other words, thinning it is a pernicious one. The shoer appears to like to do this, as it cuts very easily and gives, as he thinks, a neat appearance to the hoof. The owner appears to endorse this, as he is very careful to have his groom stop the feet, forgetting that he has permitted the shoer to remove a much more efficient stopping than any artificial one in the outer surface of the sole. This is very easy of explanation and illustration if one examines an unmutilated hoof. First of all it must be noted that the outer hard and tough crust called the wall grows out indefinitely unless it is worn or broken off by contact with the ground or reduced by the instruments of the shoer. This is not the case with the sole, for it is so constituted that after it attains a certain thickness, by a process of nature it exfoliates of its own accord, thus maintaining its normal thickness. These outer scales that keep coming out are Nature's stopping. Why? Because by protecting the inner and deeper layer from the drying process effects of the air they maintain all the moisture that is necessary in the sole. If you cut through by paring and examine a normal sole you will find that the part next to the quick (the part freshly secreted by the quick), is moist, and as you proceed to the surface of sole it gradually gets drier, the outer part being almost entirely free from moisture and admirably adapted to protect the inner and moister part until it gradually is forced outward by fresh growth from within, and becomes in its turn a "stopping" for the inner and freshly formed layer of sole.

What happens if the knife is used instead of Nature being allowed to go on with its process of desquamation? The deeper parts of the sole become exposed to the action of the air before they are prepared for it, by a gradual process of drying, and abruptly dry and contract. This is what causes the sole to become increasedly cupped and the hoof to become contracted, in a measure. The stopping of horses' hoofs is not necessary as a rule if the sole is left as it should be, in an unmutilated condition. All the fuss and waste of time and material involved in the stopping of horses' hoofs is based on error. All that is necessary to remove of the sole in a normal foot is accomplished when the rasp is flatly applied to the lower surface of the wall in reducing it to its proper dimensions. The thicker the sole the better, providing it does not project beyond the wall. One can readily understand how much more efficient a thick sole is as a protection to the underlying quick, especially on rough, frozen and stony roads, than a comparatively thin one. Now, if the sole is as thick as it should be, and in which case the white line would necessarily be, it is a good guide for the shoer in the majority of cases to rasp down to the white line.

Another error frequently made, though not so commonly as mutilation of the sole, is cutting away the frog. It does not require a deep student of the physiology of the foot to see almost at a glance the function of the frog. Take a normal hoof and examine the frog and you will observe that it is placed at the back of the hoof where the major portion of the pressure comes. You further find that, unlike either the sole or the wall, it is endowed with elasticity to a degree equalling India-rubber, so it is very evident that it is not only intended to come in contact with the ground, but also to act as a buffer in lessening concussion. Now, what happens if you cut it away and leave the heel so high that the frog does not come in contact with the ground? It shrinks and becomes as hard as wood, entirely unsuited to stand pressure without bruising the underlying quick, and no longer capable of performing its office of breaking concussion. Not only that, but with a thin, dried-up sole the shrunken hoof draws the quarter with it, and you have contracted feet, or at least heels. After this mischief has been done through ignorance, then the horse must have that cure of all ills of the foot (according to some wise ones)—spreaders—to overcome the contraction of the hoof. Although horses are largely kept under artificial conditions there is no reason why their hoofs should become contracted if rationally treated, unless some disease of the foot develops, such as navicular disease. Under such circumstances the contraction is the result of disease, not the cause.

Another pernicious practice among shoers is that of "opening the heels," which weakens the hoof and sometimes causes heel cracks, which are even more obstinate to treat than quarter cracks. "Opening the heels" is supposed to overcome contraction of that part of the hoof, but it is more likely to help it along under usual conditions than it is to overcome it. Another point that should be carefully watched in preparing the hoof for the reception of the shoe is to have it level. If either inside or outside of the hoof is left too long it changes the direction of the line of weight and subjects some portion or portions of the extremity to undue strain or pressure, and the consequent liability to injury.

Horses that are turned out into soft fields or put into box-stalls or barnyards where there is not sufficient attrition to wear the hoof to its normal dimensions should have it rasped down every month to its proper proportions. This particularly applies to colts, and neglect of it is the initial step in causing hoofs of defective formation. The practice is very general when city horses are turned out in the country for some reason or other to put "tips" on the hoofs to prevent breaking of them. This plan is a very good one if the tips are properly applied, but the way it is usually done is most irrational. The usual course is to prepare the hoof as for ordinary shoeing, then put a tip on about a quarter of an inch thick. The lengthening of the toe without a corresponding lengthening of the heel leads to tilting backward of the foot when it is placed on the ground. The toe, protected by the tip, grows, while the heel does not, so that the condition becomes intensified and a great strain is put upon the supporting structure of the fetlock and the normal relations of the various parts of the forelegs are disturbed.

All this may be avoided by using light tips and having them completely sunken in a groove made in the wall around the toe, so that their lower surface is flush with the wall at the heel. In this way the level of the hoof is maintained, there is normal pressure on the frog and heels and no breaking of the wall. In other words, the hoof is placed in perfectly natural conditions without the danger of too rapid breaking off of the wall.

Records of California Cows.

It is probably not generally known that out of a possible seven world's thirty day official butter records, three of them are held by California cows. Such is the fact, however, and moreover, they are all in one herd, viz.: the Riverside herd owned by the Pierce Land and Stock Co., of this city, all being thoroughbred Holstein-Friesians. This herd is said, by the best judges, to be beyond question of a doubt to be the best herd of Holstein-Friesians in the world.

In selecting the foundation animals of this great herd, both continents were searched for the finest specimens to be found. California should be proud of such a herd of grand dairy animals. Its influence will be felt in a few years by the improvement it will give to our dairy interests. The three great cows referred to above are:

De Natsey Baker No. 55471, 2 years, 2 months old, with a 30-day record of 1689 pounds milk; 56.523 pounds of butter fat, equivalent to 70 pounds, 10 ounces, 80% butter.

Juliana De Kol No. 55792 (with first calf) 2 years, 10 months old, with a 30-day record of 1852 pounds milk; 73.975 pounds of butter fat, equivalent to 92 pounds, 7 ounces, 80% butter.

Alcartra Polkadot No. 50798, 4 years, 24 days old, 1988 pounds milk, 78.483 pounds of butter fat, equivalent to 98 pounds, 1 ounce, 80% butter.

Nearly every member of this great herd is a star. Fifty cows have seven day official records averaging over 20 pounds butter each. No other herd in the world can make such a showing.

The Riverside herd is located on Rough and Ready Island on the San Joaquin river, five miles this side of Stockton. The steamers plying between San Francisco and Stockton stop at Riverside. At this time, the calf barn contains 100 of these beautiful black and white calves, a sight worth going a long ways to see. The owners of Riverside ranch are always pleased to have those interested in good stock pay Riverside a visit.

The long contest for the position of assistant secretary of agriculture has at last been settled by the appointment by President Roosevelt of Willett M. Hays of Minnesota. Professor Hays was one of the first to be suggested for the assistant secretaryship, and from the beginning has had strong backing among the western farmers. He had already won a national reputation by his work at the Minnesota Experiment Station and in the Minnesota Agricultural College. His grain breeding experiments are recognized as among the most valuable work that has been done in experiment station work.

The Boston *Herald* says editorially: "We sometimes hear the suggestion that the passion for fine horseflesh is going out, and that the growing fancy for automobiling has hurt it. Nothing could be further from the truth. If any gentleman doubts this proposition, let him go into the horse marts and try to find a good horse. He will probably succeed in his mission, but he will also ascertain that the demand far exceeds the supply, and that prices for what he seeks rule higher than ever. Also that these prices are promptly realized."

A durable paint may be made of one gallon of skimmed milk to three pounds of cement. Mix no more than is to be used each day. Stir often.

Pasture and hay lands pay when rightly managed. They do not need to be planted every year and need little or no cultivation.

The sly rat or mouse is more likely to go into the trap, if a piece of looking glass is set where they can see themselves.

One very common form of neglect among farmers is to have so many things to do that none of them are done well.

P. H. McEvoy of Menlo Park is offering two handsome Prince Airlie stallions for sale—Milhrae (trotting record 2:16½) and Menlo Boy 3741. For particulars see advertisement. *tf

Thinks the Jerseys It.

Harry Jenkins, summarizing the dairy cow test at the St. Louis Fair, in the *Nebraska Farmer*, says of the Jersey:

If the dairy farmer could not see the truth before he certainly can see it in the St. Louis dairy demonstration records. Here have been tried out a sufficient number of representative cows of the four breeds, for him to decide just what to expect of fair representatives of each under proper condition of handling and feed.

He finds the Jersey a deeper milker than he ever thought she was, and as rich a milker as she has ever been represented.

He finds her persistent, keeping close to her flush yield when six, seven and eight months after calving.

He finds her the most economical producer of butter fat, as well as the largest prodncer of that most valuable constituent in milk, and finds enough assurance in the four months of her trial to convince him that she will keep up that profitable yield for a longer period than the other breeds.

He finds the Holsteins yielding milk of an average richness that will not pass the standards set by some state and municipal authorities, rendering the seller liable to arrest and fine.

He finds the Holstein losing an average of fifteen pounds of milk a day per cow after they have been in the test four months, beginning practically fresh.

He finds that instead of 70 to 80 pounds of milk a day, they average for the four months of their flush period only 53½ pounds, and test about 3.4 per cent fat.

There is no need for further quibbling. "The best cow" is an established fact. She has been for fifty years in the minds of tens of thousands who are using her in profitable practical dairy work, and the St. Louis reports will convince those who have not tried her. The good Jersey is that cow, and there is no reason, that we can now see, why any intelligent cow owner should not buy, build and breed up a herd of as uniformly high producers as the twenty-five Jerseys at St. Louis. There is nothing wonderful about it. Jersey blood, weeding out of low testing cows, with good care and feed will do it.

This is the dairy truth that has been demonstrated at St. Louis for dairy farmers, and they should "adapt it to their use."

Good farmers often succeed with poor farms, and good farms often fail with poor farmers.

Two Prince Airlie Stallions For Sale.

MILBRAE 2:16 1-2 by Prince Airlie 28045 by Guy Wilkes 2:15¼, sire of Fred Kohl 2:07¾. Hulda 2:08½, Seymour Wilkes 2:08½; 1st dam Fearless by Fallis 4781 (rec 2:23), sire of John R. Baldwin 2:17¾, Fallacy 2:17½, Falrose 2:19, and dam of Janice 2:08¾; 2d dam Jean Perault by Signal 3327. MILBRAE has been in training just one year, getting a trotting record of 2:16½ (trial 2:13) with first half in 1:05, a quarter in :31¼. This is no measure of his speed. He is a seal brown, 16 hands, weighs 1200 pounds, 6 years old.

MENLO BOY 37401 by Prince Airlie 28045 by Guy Wilkes 2:15¼; 1st dam Signal by Del Sur 1098, grandam Lady Signal by Signal 3327. With very little work he has trotted in 2:29½, quarters in :35. He is a brown with white pasterns, 16.1 hands, weighs about 1170, and 5 years old.

For further information apply to
P. H. McEVOY, Menlo Park, Cal

McKINNEY MARE FOR SALE.

Arketa 2:14½ Gray mare by McKinney, dam by A. W. Richmond; 9 years old; Sound; Good race horse in her class and a first class road mare; Gentle, does not pull and city broken. Reason for selling is that owner has not time to devote to a horse of this class. Address, STEVE MADISON, City Water Works, Vancouver, B. C.

FOR SALE.

A HANDSOME 4-YEAR-OLD BAY FILLY; pacer: stands 16.2½ hands; sired by McKinney, dam Mission Bell by St. Nicholas. Full sister to Mechanic. A smooth-gaited filly, goes without straps or boots, and with less than a month's handling has paced a half in 1:11. Is sure to make a fast pacer. Address or apply to JOHN ROWAN, 1347 East South Street, Stockton, Cal.

STOCK FARM FOR SALE.

FINE STOCK FARM, HIGHLY IMPROVED, in choice location in California, for sale. Address BREEDER AND SPORTSMAN.

Tuttle's Elixir Co. 52 Beverly St. Boston, Mass.
Mack & Co., Agents, 13-15 Fremont St., San Francisco, Cal.
Beware of so-called Elixirs. Tuttle's only is genuine. Avoid all blisters; they are only temporary relief.

PACING 2:11 1-4 **RITA H.** TROTTING 2:14 1-4

FOR SALE.

RITA H. is by McKinney 2:11 1-4, dam Smut by Prompter.

She is a dark brown mare, stands nearly 16 hands high and weighs in racing trim 1050 lbs. In 1903 she started eight times on the Washington and Oregon Circuit, won her first seven starts and only lost four heats during the entire circuit, getting a pacing record of 2:11¼. In 1904 she was converted to the trotting gait and proved herself a consistent performer, winning most of her races in fast time and getting a trotting record of 2:14¼. She is six years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Her owner has driven her in 2:12½ (pacing) in the Los Angeles Driving Club races, she having won all but one in which she started. This mare is all right and there is not a thing the matter with her, but my business demands are such that I cannot afford to devote any time to racing. For prices and further particulars address

BYRON ERKENBRECHER,
301 Currier Bldg, Los Angeles, Cal,

FOR SALE.

Black Mare, 7 years old, 16 hands high, by McKinney 2:11¼, dam by Antevolo 2:19; second dam Fontana (dam of Silas Skinner 2:17 and Flora Belle 2:23) by Almont 33; third dam Fanny Williams (dam of Bay Chieftain 228) by Alexander's Abdallah. She has trotted miles in 2:24. Also her

Weanling Filly by Stam B. 2:11; entered in the Kentucky Futurity and the Pacific Breeders Futurity Stakes.

Price, $750 for both.

Apply to or address A. M. SCHMIDT, Room 27, Macdonough Building, Oakland, Cal.

STALLION FOR SALE.

Sidney Boy 22991. One of the handsomest sons of Sidney. Stands 16 hands and weighs 1150 pounds. In color he is a dark bay or brown, and in every respect a splendid individual. On his dam's side he carries the blood of David Hill, a strain that is much sought after by Eastern horsemen. He is a sure foal-getter and sires size, style, speed and quality. He has a good disposition and a lady can drive him with perfect safety. His colts are here to show for themselves. For particulars address

J. W. STUFFLEBEEM, Tulare, Cal.

FOR SALE.

ROBIZOLA 2:12 1-4 (trotting)

By Robin 28370; dam Myrtle by Anteeo; second dam Luella by Nutwood ROBIZOLA is a handsome bay mare, 7 years old, stands nearly 16 hands and weighs about 1050 lbs.; absolutely sound; excellent roadster and high-class race horse and brood mare. Can be seen at Morton's stable, cor. Geary and Leavenworth streets, San Francisco. Address

DR. J. W. CLARK, Santa Rosa.

WANTED TO LEASE.

A McKINNEY STALLION FOR PUBLIC use, on shares or otherwise. Must be a pure gaited trotter and out of a good individual mare. This is a rare opportunity for a horse of merit to make a reputation. Address M. L. L., in care of BREEDER AND SPORTSMAN.

Registered Stallion For Sale.

PANAMINT (Reg. No. 9688)

Bay horse foaled in 1896. Bred by Burns & Waterhouse. Sire Fellowcharm, Son of Longfellow and Trinket by imp. Great Tom; 1st dam imp. Paloma (7 winners) by The Drummer; 2d dam Canary (5 winners) by Lapidist; 3d dam Rosalie (famous Australian matron) by Peter Wilkins; 4th dam imp. Rosemary by Stockwell; 5th dam Rosalie by Surplice and on to 21st dam, Layton Barb. Mare.

Panamint is by the excellent Longfellow horse, Fellowcharm sire of many winners in California, out of imp. Paloma (dam of Palomacito, Don Clarencio, Yellow Tail, Armitage, Examiner, Miss Rowena and Palomita). Burns & Waterhouse gave $7500 for imp. Paloma at the Hearst sale in 1894, and she has thrown high class winners with marked regularity, proving worth many times the amount paid for her.

Panamint has won many good races during his turf career and when his racing days are over he should make an excellent sire. Fellowcharm, his sire, was a good winner, and by Longfellow, winner of fourteen out of sixteen races, his progeny winning over $1,400,000. Panamint has two crosses of Stockwell, and one of his brother, Rataplan, received through the dam imp. Paloma. Besides he has the blood of the Flying Dutchman, the unbeaten Bay Middleton and many crosses of Touchstone and imp Glencoe through both sire and dam.

Panamint had the honor to defeat such rare good performers as Southern Girl, Wooster Boy, Horton, Pupil, Afamada, Storm King, Sevoy, Pat Morrissey and Hungarian, showing a lot of class. In 1899 Panamint started fifteen times, winning five, finishing second three times, third twice. In 1900 he started sixteen times, winning eight, finishing second twice and third once. Address

J. C. KAIDERA, Centreville, Wash.

FOR SALE.

BY ORDER OF CONGRESSMAN J. C. NEEDHAM I am authorized to sell the following highly bred mares, colts and fillies:

STUB, b. m., 9 yrs old, sired by Directed (son of Director and Twist, dam of Steve Whipple 2:12); 1st dam by Chieftain 721; 2d dam Jenny Lind by Vt. Black Hawk 5, &c.

Bay Filly, 3 yrs old, by Temescal (son of Palo Alto and Telie, dam of four, by Gen. Benton); dam Stub by Directed [see above].

Bay Filly, 2 yrs old, by Guy McKinney, dam Stub.

Brown Colt, 1 yr old, by Guy McKinney, dam Stub.

Bay Colt, weanling, by Charles Derby 2:20, dam Stub.

DAISY WHIPPLE, br. m., 13 yrs old, sired by Steve Whipple 2:12; dam by McCracken's Golddust; 2d dam by Williamson's Belmont.

Chestnut Gelding, 2 yrs old, by Directed; dam Daisy Whipple.

Bay Colt, weanling, by Directed; dam Daisy Whipple.

CADDIE WHIPPLE, b. m., 11 yrs old, sired by Steve Whipple 2:12; dam Caddie R. by Elect; 2d dam Young Flora Hill (dam of Needham's Whipple (2) 2:27¾) by Chieftain 721, &c.

Brown Filly, 2 yrs old, by Directed; dam Caddie Whipple.

Brown Filly, weanling, by Directed; dam Caddie Whipple.

Chestnut Filly, 3 yrs old, by Directed; dam Bessie Whipple by Steve Whipple 2:12; 2d dam by McCracken's Golddust; 3d dam by Williamson's Belmont.

The three two-year-olds are entered in the Kentucky Futurity, $21,000, for foals of 1902.

The yearling colt by Guy McKinney is entered in the Kentucky Futurity, $22,000; the Hartford Futurity, $15,000; the Horse Review Stake, $10,000, and the American Horse Breeder Stake, $10,000, for foals of 1903—$57,000 worth of stakes in all.

The weanling colt by Charles Derby-Stub is entered in the American Horse Breeder Stake, $10,000, for foals of 1904.

The weanling colt by Directed-Daisy Whipple is entered in the Horse Review Stake, $10,000, for foals of 1904.

All good size, fine individuals. Lack of time to devote to the horses is the reason for selling. For further particulars call on or address

H. B. NEEDHAM,
R. F. D. No. 2, Modesto, Cal.

HAL B. 2:04½

The Only High-Class "Hal" Stallion on the Pacific Coast . . . .

HAL B. 2:04½ was the sensation of the Grand Circuit in 1899, in which he started nine times, winning all his races. He was the largest money winner of that season. HAL B. is full brother to Fanny Dillard 2:03¾, world's race record for pacing mares. At 11 years of age he is the sire of four in the list. HAL B. is by Hal Dillard 2:04¾ (sire of Fanny Dillard 2:03¾, Hal B. 2:04½, Hal Clipper 2:07¼, Cambina Maid 2:08¼, Young Hal 2:10¾, Hallie Rackett 2:11, trotting, etc.), dam Ella (dam of Fanny Dillard 2:03¾ and Hal B. 2:04½) by Blue Boy, son of Blue Bull 75; second dam by Blue Bull 75.

HAL B. is a handsome dark bay or brown stallion, stands 15.3½ hands and is an ideal horse in every particular. Remember this is your opportunity at home to breed to a distinguished representative of the great Tennessee pacing family, "The Hals."

Season at Agricultural Park, Los Angeles, until April 15, 1905.

All correspondence concerning HAL B. while on this Coast should be addressed to

OMER VAN KIRK,
University P. O., Los Angeles, Cal.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.
